Overview

The sample set for NAS Jacksonville, CTO 162, SDG 162-4, consists of eleven (11) aqueous environmental samples. One (1) field duplicate pair (JAX-47-DUP03-041102 / JAX-47-937-MW1S-01-041102) is included in this SDG.

All samples were analyzed for iron and manganese. Samles JAX-47-937-MW1S-01-041102, JAX-47-937-MW6D-01-041102, JAX-47-DUP03-041102, and JAX-47-EB01-041102 were analyzed for TAL metals. All samples except JAX-47-DUP03-041102 and JAX-47-EB01-041102 were analyzed for dissolved iron and manganese, ammonia, Biochemical Oxygen Demand (BOD), Chemical Oxygen Demand (COD), chloride, nitrate, nitrite, sulfate, sulfide, Total Kjeldahl Nitrogen (TKN), and Total Organic Carbon (TOC). The samples were collected by Tetra Tech NUS April 10-12, 2002 and analyzed by Katahdin Analytical Services. Metals analyses except mercury were conducted using method SW846 6010B. Mercury analyses were conducted using method SW846 7470A. Ammonia analyses were conducted using method 350.1. BOD analyses were conducted using method EPA 405.1. COD analyses were conducted using method EPA 410.4. Chloride analyses were conducted using method EPA 325.2. Nitrate and Nitrite analyses were conducted using method 353.2. Sulfate analyses were conducted using method 375.4. Sulfide analyses were conducted using method 376.1. TKN analyses were conducted using method EPA 351.2. TOC analyses were conducted using method EPA 415.1.

Metals analyses except mercury were conducted using Inductively Coupled Plasma (ICP) methodologies. Mercury analyses were conducted using Cold Vapor Atomic Absorption (CVAA) methodologies.

These data were evaluated based on the following parameters:

* • Data Completeness
* • Holding Times
* • Calibration Recoveries
  • Laboratory Blank Analyses

* • ICP Interference Results
• Matrix Spike Recoveries
* • Laboratory Duplicate Results
• Laboratory Control Sample Recoveries
* • ICP Serial Dilution Results
* • Field Duplicate Results
* • Sample Quantitation
* • Detection Limits

* - All quality control criteria were met for this parameter.

Laboratory Blank Analyses

The following contaminants were detected in the laboratory method/preparation blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Aluminum	43.78 ug/L	218.9 ug/L
Antimony	3.66 ug/L	18.3 ug/L
Barium	0.86 ug/L	4.3 ug/L
Beryllium	1.15 ug/L	5.75 ug/L
Cadmium	0.91 ug/L	4.55 ug/L
Calcium	53.84 ug/L	269.2 ug/L
Chromium	1.29 ug/L	6.45 ug/L
Iron	12.11 ug/L	60.55 ug/L
Magnesium	46.51 ug/L	232.6 ug/L
Nickel	2.08 ug/L	10.4 ug/L
Selenium[(1)]	6.15 ug/L	30.75 ug/L
Silver	2.19 ug/L	10.95 ug/L
Thallium	0.11 ug/L	0.55 ug/L
Vanadium	0.82 ug/L	4.1 ug/L
Zinc	4.6 ug/L	23.0 ug/L

[(1)] Maximum concentration found in aqueous preparation blank.

An action level of 5X the maximum concentration was used to evaluate the sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results < action level were qualified (U) for blank contamination for aluminum, antimony, beryllium, iron, nickel, thallium, vanadium, and zinc. No validation action was necessary for the remaining analytes because the sample results were either greater than the action level or were nondetects.

Matrix Spike Recoveries Analysis

The matrix spike percent recovery (%R) for BOD was below the control limit of 75-125%. Positive results were qualified as estimated (J). Nondetected results were qualified as estimated (UJ).

Laboratory Control Sample Analysis

The LCS/LCSD %R for BOD analyzed on 4/18/02 was below the control limit of 80-120%. Positive results were qualified as estimated (J) and nondetected results were qualified as estimated (UJ) in sample JAX-47-MW19S-01-041202 only.

Notes

Sample JAX-47-DUP03-041102 was listed on the chain of custody for sulfide, BOD, chloride, nitrate, nitrite, and sulfate analyses and not for TAL metals analyses. Louis Knight requested that analyses be performed for TAL metals but not for miscellaneous parameters for this sample.

The CRI %R's for cadmium, lead, and selenium were above the control limit of 80-120%. No qualification action was required because all sample values were nondetects.

The ICP serial dilution percent difference for iron was above 10%. No qualification action was required because the initial sample result was <50X IDL.

Executive Summary

Laboratory Performance: Several analytes were present in the laboratory method/preparation blanks. BOD was qualified due to matrix spike noncompliance. BOD was qualified due to LCS noncompliance.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Review", February 1994 and the NFESC document entitled "Navy IRCDQM" (September 1999).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A	=	Lab Blank Contamination
B	=	Field Blank Contamination
C	=	Calibration (i.e., % RSDs, %Ds, ICVs, CCVs, RPDs, RRFs, etc.) Noncompliance
D	=	MS/MSD Noncompliance
E	=	LCS/LCSD Noncompliance
F	=	Lab Duplicate Imprecision
G	=	Field Duplicate Imprecision
H	=	Holding Time Exceedance
I	=	ICP Serial Dilution Noncompliance
J	=	GFAA PDS - GFAA MSA's $r < 0.995$
K	=	ICP Interference - include ICSAB % R's
L	=	Instrument Calibration Range Exceedance
M	=	Sample Preservation
N	=	Internal Standard Noncompliance
N01	=	Internal Standard Noncompliance Dioxins
N02	=	Recovery Standard Noncompliance Dioxins
N03	=	Clean-up Standard Noncompliance Dioxins
O	=	Poor Instrument Performance (i.e., base-time drifting)
P	=	Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q	=	Other problems (can encompass a number of issues)
R	=	Surrogates Recovery Noncompliance
S	=	Pesticide/PCB Resolution
T	=	% Breakdown Noncompliance for DDT and Endrin
U	=	Pest/PCD% between columns for positive results
V	=	Non-linear calibrations, tuning $r < 0.995$ (correlation coefficient)
W	=	EMPC result
X	=	Signal to noise response drop
Y	=	Percent solids <30%
Z	=	Uncertainty at 2 sigma deviation is less than sample activity

Tetra Tech NUS **INTERNAL CORRESPONDENCE**

TO: G. ROOF **DATE:** DECEMBER 24, 2002

FROM: SETH C. STAFFEN **COPIES:** DV FILE

SUBJECT: **ORGANIC DATA VALIDATION – VOA/PEST/PCB**
CTO 162, NAS JACKSONVILLE
SDG: WS4261

SAMPLES: 4/AQUEOUS/VOA/PEST/PCB

JAX47-MW21-01 JAX47-MW22-01
JAX47-MW23-01 JAX47-MW25-01

OVERVIEW

The sample set for CTO 162, NAS Jacksonville; SDG: WS4261 consists of four (4) aqueous environmental samples. The samples were analyzed for TCL volatile organic compounds, pesticides, and polychlorinated biphenyls (PCBs). No field duplicate pairs were included in this SDG.

The samples were collected by TetraTech NUS on November 6-7, 2002 and analyzed by Katahdin Analytical Services. The analysis was conducted in accordance with Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria using SW-846 Methods 8260B, 8081, and 8082 analysis and reporting protocols. The data contained in this SDG were validated with regard to the following parameters:

* • Data completeness
* • Holding times
* • GC/MS tuning and system performance
• Initial/continuing calibrations
• Laboratory method and field quality control blank results
* • Surrogate spike recoveries
* • Matrix Spike/Matrix Spike Duplicate Results
* • Laboratory Control Sample Results
* • Internal Standard Performance
* • Compound Identification
* • Compound Quantitation
* • Detection Limits

The symbol (*) indicates that quality control criteria were met for this parameter. Problems affecting data quality are discussed below; documentation supporting these findings is presented in Appendix C. Qualified Analytical results are presented in Appendix A.

CTO 162

VOLATILE

The initial calibration on 11/08/02 contained relative response factors (RRFs) that fell below the 0.05 quality control limit for 2-butanone and acetone. The positive and nondetected results were rejected, R, and, UR, respectively, in all samples.

The continuing calibration on 11/12/02 at 0637 contained relative response factors (RRFs) that fell below the 0.05 quality control limit for 2-butanone and acetone. The positive and nondetected results were rejected, R, and, UR, respectively, in all samples.

The continuing calibration on 11/12/02 at 0637 contained percent differences (%Ds) that exceeded the 25% quality control limit for 2-butanone, acetone, and 2-hexanone. The positive and nondetected results for 2-butanone and acetone were already rejected for a more severe RRF noncompliance in all samples. The nondetected results for 2-hexanone were qualified as estimated, UJ, in all samples.

The following compounds were detected in the laboratory method blank as indicated below:

Compound	Maximum Concentration	Action Level
Methylene chloride	0.5 µg/L	2.5 µg/L
1,2,4-Trichlorobenzene	0.6 µg/L	3.0 µg/L

Blank Actions:

- Value < Reporting Limit (RL); report RL followed by a U.
- Value > RL and < action level; report value followed by a U.
- Value > RL and > action level; report value unqualified.

An action level of 10X (common laboratory contaminants) and 5X (other contaminants) the blank concentration was used to evaluate laboratory contamination. Dilution factors and sample aliquots were taken into consideration prior to the application of all action levels. No qualification action was taken for methylene chloride because methylene chloride was not detected in any samples. The 1,2,4-trichlorobenzene result for sample JAX47-MW25-01 was qualified due to blank contamination.

PESTICIDES

The continuing calibration on 11/16/02 at 0358 contained %Ds that exceeded the 15% quality control limit on both columns for g-BHC, d-BHC, 4,4'-DDE, 4,4'-DDT, 4,4'-DDD, and Endosulfan sulfate. The nondetected results were qualified as estimated, UJ, in associated samples.

The closing calibration verification standard from 111/19/02 contained responses that were half of the expected values. The laboratory suspected the new chromatography data system as the cause of the problem. The laboratory re-analyzed sample JAX47-MW25-01 and submitted an addendum containing the appropriate documentation.

Sample JAX47-MW25-01 was analyzed at a 10X dilution. Thus causing elevated reporting limits.

Additional Comments

Sample JAX47-MW24-01 was listed on the Chain of Custody. However, the volatile, pesticide, and PCB analyses for the aforementioned sample were canceled.

Several volatile compounds did not meet the required detection limit (RDL) as stated in the laboratory specification.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Methylene chloride and 1,2,4-trichlorobenzene were detected in the laboratory method blank. Initial and continuing calibration criteria were not met.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (October, 1999), and the NFESC guidelines IRCDQM (September, 1999). The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC guidelines and the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as Reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration (i.e., % RSDs, %Ds, ICVs, CCVs, RPDs, RRFs, etc.) Noncompliance
D = MS/MSD Noncompliance
E = LCS/LCSD Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - include ICSAB % R's
L = Instrument Calibration Range Exceedance
M = Sample Preservation
N = Internal Standard Noncompliance
N01 = Internal Standard Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = Pest/PCD% between columns for positive results
V = Non-linear calibrations, tuning $r < 0.995$ (correlation coefficient)
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

Sample Receipt

The following samples were received on December 12, 2002 and were logged in under Katahdin Analytical Services work order number WS4555 for a hardcopy due date of January 3, 2003.

KATAHDIN Sample No.	TTNUS Sample Identification
WS4555-1	JAX-47-SB57-S01
WS4555-2	JAX-47-SB58-S01
WS4555-3	JAX-47-SB56-S02
WS4555-4	JAX-47-SB16-S02
WS4555-5	JAX-47-SB56-S01
WS4555-6	JAX-47-SB55-S01
WS4555-7	JAX-47-IDW-SS1

The samples were logged in for the analyses specified on the chain of custody form. All problems encountered and resolved during sample receipt have been documented on the applicable chain of custody forms.

Sample analyses have been performed by the methods as noted herein.

Should you have any questions or comments concerning this Report of Analysis, please do not hesitate to contact your Katahdin Analytical Services Project Manager, **Andrea J. Colby**. This narrative is an integral part of the Report of Analysis.

Volatile Organics Analysis

One soil/sediment sample was received by the Katahdin GC/MS laboratory on December 12, 2002, and was specified to be analyzed and quantitated for a client-specified list of analytes in accordance with SW-846 method 8260B.

Analyses for this SDG were performed on the 5970-Q instrument using low-level (heated purge) techniques.

Batch QC (VBLK and LCS) was performed in the twelve-hour window. The LCS QC sample was spiked with the entire list of compounds quantitated for at 50 ppb.

The sample was received in EnCore sampling devices and was extruded into water (two aliquots) and methanol (one aliquot) on the day of receipt at the laboratory.

The reported percent recovery acceptance limits for the Laboratory Control Samples (LCSs) for these samples are statistically derived limits. Katahdin standard operating procedure is to not take corrective action until greater than ten percent of the spiked analytes are outside of QC limits.

In the calibration curve analyzed for this SDG, linear or quadratic models were used for those analytes having %RSD values exceeding 15%.

Several manual integrations were performed due to split peaks; all have been flagged with a "M" (software-generated) on the pertinent quantitation reports. All "M" flags have been dated and initialed by the analyst performing the integration. In addition, all "M" flags have been reviewed and approved by the GC/MS supervisor. Copies of each manual integration are included in the data package.

The volatile organic staff noted no other protocol deviations.

GC Laboratory

Samples WS4555-1 through -7 were received on December 12, 2002 and were analyzed for pesticides according to SW846 method 8081A. The samples were extracted and analyzed within hold time, and all QC criteria were met with the following comments:

Pesticide Analysis

Samples WS4555-5 and -6 had high recoveries for the surrogate TCX on both channels, which were outside the laboratory established acceptance limits. Since the recoveries for DCB were acceptable, the samples were not reanalyzed.

Sample WS4555-2 was diluted in order to bring high concentration target analytes into the calibration range. Consequently, the surrogates were diluted out of range.

The laboratory control sample (LCS) WG1299-2 and the laboratory control sample duplicate (LCSD) WG1299-3 had slightly high recoveries for beta-BHC, Heptachlor epoxide, Endosulfan I, Endosulfan II, and gamma-Chlordane, which were outside the laboratory established acceptance limits. The LCSD also had high recoveries for eight additional compounds, which were outside the laboratory established acceptance limits.

The closing calibration verification standard (CV) (file 8SL1122) had a high response for TCX on channel A, which resulted in a %D that was outside the method acceptance limit of 15%. The associated sample may be biased high for TCX on channel A.

There were no other protocol deviations or observations noted by the GC laboratory staff.

Wet Chemistry Analysis

Samples were received on December 12, 2002 and logged in as work order WS4555. Analyses for Total Solids were performed according to U.S. EPA Contract Laboratory Program Statement of Work for Inorganic Analysis.

All analyses were performed within analytical hold time. All quality control criteria were met.

No deviations were noted by the Wet Chemistry group.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager, Quality Assurance Officer, or the Data Management Supervisor as verified by the following signature.

Sample Data Section

ORGANICS DATA QUALIFIERS

U	Indicates the compound was analyzed for but not detected above the laboratory Practical Quantitation Limit.
*	Compound recovery outside of quality control limits.
D	Indicates it was not possible to calculate the surrogate recovery due to sample dilution.
E	Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.
J	Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Practical Quantitation Limit (PQL), but above the Method Detection Limit (MDL).
B	Indicates the analyte was detected in the laboratory method blank analyzed concurrently with the sample.
N	Presumptive evidence of a compound based on a mass spectral library search.
A	Indicates that a tentatively identified compound is a suspected aldol-condensation product.
P	Used for Pesticide/Aroclor analyte when there is a greater than 25% difference for detected concentrations between the two GC columns.

Tetra Tech NUS **INTERNAL CORRESPONDENCE**

TO: **G. ROOF** **DATE:** **MARCH 22, 2004**

FROM: **JACQUELINE J. RASPANTI** **COPIES:** **DV FILE**

SUBJECT: **INORGANIC DATA VALIDATION – ARSENIC**
CTO- 162 NAS JACKSONVILLE
SAMPLE DELIVERY GROUP (SDG) – WU0535

SAMPLES: 8/Aqueous/

JAX47-937-MW1S-022704	JAX47-937-MW2S-022704	JAX47-937-MW4S-022704
JAX47-DUP01-022704	JAX47-MW12S-022704	JAX47-MW14D-022704
JAX47-MW15S-022704	JAX47-MW18S-022704	

Overview

The sample set for CTO 162, NAS Jacksonville, SDG WU0535, consists of eight (8) aqueous environmental samples. One (1) field duplicate pair (JAX47-DUP01-022704 / JAX47-937-MW1S-022704) is included in this SDG.

All samples were analyzed for total arsenic. The samples were collected by Tetra Tech NUS on February 27, 2004 and analyzed by Katahdin Analytical Services under Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria. Arsenic analyses were conducted using SW 846 method 6010B.

Metals analyses were conducted using Inductively Coupled Plasma (ICP) methodologies.

These data were evaluated based on the following parameters:

* • Data Completeness
* • Holding Times
* • Calibration Results
* • Laboratory Blank Analyses
* • Field Duplicate Results
* • Detection Limits

* - All quality control criteria were met for this parameter.

Notes

Samples JAX47-937-MW1S-022704, JAX47-937-MW2S-022704, and JAX47-937-MW4S-022704 were reported by the laboratory as JAX47-937-MW1S-02270, JAX47-937-MW2S-02270, and JAX47-937-MW4S-02270 due to limitations in their data reporting software. The data reviewer corrected the Form 1's and the database.

Executive Summary

Laboratory Performance: None.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Data Review", July 2002 and the NFESC document entitled "Navy IRCDQM" (September 1999).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

Sample Receipt

The following samples were received on February 28, 2004 and were logged in under Katahdin Analytical Services work order number WU0535 for a hardcopy due date of March 11, 2004.

KATAHDIN Sample No.	TTNUS Sample Identification
WU0535-1	JAX47-DUP01-022704
WU0535-2	JAX47-MW12S-022704
WU0535-3	JAX47-MW18S-022704
WU0535-4	JAX47-937-MW4S-02270
WU0535-5	JAX47-937-MW1S-02270
WU0535-6	JAX47-937-MW2S-02270
WU0535-7	JAX47-MW14D-022704
WU0535-8	JAX47-MW15S-022704

The samples were logged in for the analyses specified on the chain of custody form. All problems encountered and resolved during sample receipt have been documented on the applicable chain of custody forms.

Sample analyses have been performed by the methods as noted herein.

Should you have any questions or comments concerning this Report of Analysis, please do not hesitate to contact your Katahdin Analytical Services Project Manager, **Andrea J. Colby**. This narrative is an integral part of the Report of Analysis.

Metals Analysis

The samples of Katahdin SDG WU0535 were prepared and analyzed for metals in accordance with the "Test Methods for Evaluating Solid Waste", SW-846, November 1986, Third Edition.

Inductively-Coupled Plasma Atomic Emission Spectroscopic Analysis (ICP)

Aqueous-matrix Katahdin Sample Nos. WU0535-(1-8) were digested for ICP analysis on 0/02/04 (QC Batch UC02ICW0) in accordance with USEPA Method 3010B. Katahdin Sample No. WU0535-1 was prepared with duplicate matrix-spiked aliquots.

ICP analyses of the Katahdin SDG WU0535 sample digestates were performed in accordance with USEPA Method 6010B, using a Thermo Jarrell Ash (TJA) Trace ICP. All samples were

analyzed within holding times and all QC criteria were met with the following comments or exceptions:

Some of the results for run QC samples (ICV, ICB, CCV, CCB, ICSA, and ICSAB) included in the accompanying data package may have exceeded acceptance limits for some elements. Please note that all client samples and batch QC samples associated with out-of-control results for run QC samples were subsequently reanalyzed for the analytes in question.

Matrix QC Summary

The matrix-spiked aliquots of Katahdin Sample No. WU0535-1 was within the laboratory's acceptance criteria (75% - 125% recovery of the added element, if the native concentration is less than four times the amount added) for arsenic.

The matrix spike duplicate analysis of Katahdin Sample No. WU0535-1 was within the laboratory's acceptance limit (<20% relative difference between duplicate matrix spiked aliquots) for arsenic.

The serial dilution analyses of Katahdin Sample No. WU0535-1 was within the laboratory's ICP serial dilution acceptance limit (<10% difference between the original sample result and the result for a 5-fold dilution of the sample, if the result for the dilution is at least ten times the instrument detection limit) for arsenic.

SAMPLES:	3/Groundwater/		
	JAX47-937-MW03S	JAX47-MW16S	JAX47-MW17S

Overview

The sample set for CTO 162, NAS Jacksonville, SDG WU0811, consists of three (3) groundwater environmental samples.

All samples were analyzed for arsenic. The samples were collected by TetraTech NUS on March 26, 2004 and analyzed by Katahdin Analytical Services under Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria. Arsenic analyses were conducted using SW 846 method 6010B.

These data were evaluated based on the following parameters:

* • Data Completeness
* • Holding Times
* • Calibration Recoveries
* • Laboratory Blank Analyses
* • Detection Limits

* - All quality control criteria were met for this parameter.

Notes

The Contract Required Detection Limit (CRDL) percent recovery for arsenic on 3/31/04 at 14:58 was > 120% quality control limit. No validation action was taken based on the CRDL percent recovery.

Executive Summary

Laboratory Performance: None.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Review", July 2002 and the NFESC document entitled "Navy IRCDQM" (September 1999).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

TASK ORDER MANAGER: GREG ROOF

Sample Receipt

The following samples were received on March 29, 2004 and were logged in under Katahdin Analytical Services work order number WU0811 for a hardcopy due date of April 12, 2004.

KATAHDIN Sample No.	TTNUS Sample Identification
WU0811-1	JAX47-937-MW03S
WU0811-2	JAX47-MW16S
WU0811-3	JAX47-MW17S

The samples were logged in for the analyses specified on the chain of custody form. All problems encountered and resolved during sample receipt have been documented on the applicable chain of custody forms.

Sample analyses have been performed by the methods as noted herein.

Should you have any questions or comments concerning this Report of Analysis, please do not hesitate to contact your Katahdin Analytical Services Project Manager, **Andrea J. Colby**. This narrative is an integral part of the Report of Analysis.

Metals Analysis

The samples of Katahdin SDG WU0811 were prepared and analyzed for metals in accordance with the "Test Methods for Evaluating Solid Waste", SW-846, November 1986, Third Edition.

Inductively-Coupled Plasma Atomic Emission Spectroscopic Analysis (ICP)

Aqueous-matrix Katahdin Sample No. WU0811-1 was digested for ICP analysis on 03/29/04 (QC Batch UC29ICW0) in accordance with USEPA Method 3010A.

Aqueous-matrix Katahdin Sample Nos. WU0811-(2-3) were digested for ICP analysis on 03/30/04 (QC Batch UC30ICW0) in accordance with USEPA Method 3010A.

ICP analyses of the Katahdin SDG WU0811 sample digestates were performed in accordance with USEPA Method 6010B, using a Thermo Jarrell Ash (TJA) Trace ICP. All samples were analyzed within holding times and all QC criteria were met with the following comments or exceptions:

Some of the results for run QC samples (ICV, ICB, CCV, CCB, ICSA, and ICSAB) included in the accompanying data package may have exceeded acceptance limits for some elements. Please note that all client samples and batch QC samples associated with out-of-control results for run QC samples were subsequently reanalyzed for the analytes in question.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the Operations Manager or the Quality Assurance Officer as verified by the following signature.

Maria Crouch

J.3 Phase III

Tetra Tech NUS **INTERNAL CORRESPONDENCE**

TO: **M. PETERSON** **DATE:** **APRIL 17, 2007**

FROM: **TERRI L. SOLOMON** **COPIES:** **DV FILE**

SUBJECT: **INORGANIC DATA VALIDATION – ARSENIC, TOTAL DISSOLVED SOLIDS, TOTAL SUSPENDED SOLIDS**
CTO – 047 NAS JACKSONVILLE
SAMPLE DELIVERY GROUP (SDG) – F48437

SAMPLES: 4/Aqueous/

JAX47-937-MW025	JAX47-937-MW03S
JAX47-937-MW04S	JAX47-937-MW05S

Overview

The sample set for CTO 047, NAS Jacksonville, SDG F48437, consists of four (4) aqueous environmental samples. No field duplicate pairs are included within this SDG.

All samples were analyzed for arsenic, total dissolved solids and total suspended solids. The samples were collected by Tetra Tech NUS on April 3, 2007 and analyzed by Accutest Laboratories Southeast under Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria. Arsenic analyses were conducted using SW-846 method 6010B. Total dissolved solid analyses were conducted using SW-846 method 160.1. Total suspended solid analyses were conducted using SW-846 method 160.2.

Metals analyses were conducted using Inductively Coupled Plasma (ICP) instrumentation.

These data were evaluated based on the following parameters:

* • Data Completeness
* • Holding Times
* • Calibration Verification Results
• Laboratory Method/Preparation Blank Analyses
* • ICP Interference Check Sample Results
* • Matrix Spike/Matrix Spike Duplicate Results
* • Laboratory Control Sample/ Laboratory Control Sample Duplicate Results
* • ICP Serial Dilution Results
* • Detection Limits
* • Analyte Quantitation

* - All quality control criteria were met for this parameter.

Laboratory Blank Analyses

The following contaminant was detected in the laboratory method/preparation blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Arsenic	4.4 ug/L	22 ug/L

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results less than the blank action level for arsenic were qualified "U" as a result of laboratory blank contamination.

Notes

Laboratory duplicate, matrix spike / matrix spike duplicate and ICP serial dilution analyses were not performed on samples included within this SDG. No validation actions were warranted.

Executive Summary

Laboratory Performance: Arsenic was present in the laboratory method blank.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Review", October 2004 and the DOD document entitled "Quality System Manual (QSM) for Environmental Laboratories" (January 2006).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the DOD QSM and the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS-GFAA MSA's r < 0.995 / ICP PDS Recovery Noncompliance
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O - Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DOT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient r < 0.995
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

APPENDIX C
SUPPORT DOCUMENTATION

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Tetra Tech NUS **Job No:** F48437

Site: PSC47-NAS Jax **Report Date:** 4/10/2007 11:09:53

4 Samples were collected on 04/03/2007 and were received at Accutest on 04/04/2007 properly preserved, at 0.4 Deg. C and intact. These Samples received an Accutest job number of F48437. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Metals by Method SW846 6010B

Matrix: AQ **Batch ID:** MP11642

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Samples F48434-1MS, F48434-1MSD, F48434-1SDL, F48434-1DUP were used as the QC samples for metals.

RPD for Duplicate for Arsenic is outside control limits for sample MP11642-D1. RPD acceptable due to low duplicate and sample concentrations.

RPD for Serial Dilution for Arsenic is outside control limits for sample MP11642-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Wet Chemistry by Method EPA 160.1

Matrix: AQ **Batch ID:** GN24896

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample F48437-1DUP was used as the QC sample for Solids, Total Dissolved.

Wet Chemistry by Method EPA 160.2

Matrix: AQ **Batch ID:** GN24895

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample F48437-1DUP was used as the QC sample for Solids, Total Suspended.

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

Overview

The sample set for NAS Jacksonville, CTO 047, SDG BR006-005, consists of twenty solid environmental samples.

All of the samples were analyzed for arsenic. The samples were collected by Tetra Tech NUS on November 28, 2006 and analyzed by Environmental Conservation Laboratories, Inc. Arsenic analyses were conducted using SW-846 method 6010B.

These data were evaluated based on the following parameters:

* • Data Completeness
* • Holding Times
* • Calibration Recoveries
• Laboratory Method/Preparation Blank Analyses
* • ICP Interference Check Sample Result
* • Matrix Spike Recoveries
* • Laboratory Control Sample Recoveries
• Detection Limits
* • Analyte Quantitation

* - All quality control criteria were met for this parameter.

Laboratory Method/Preparation Blank Analyses

The following contaminant was detected in the laboratory method/preparation blanks at the following maximum concentration:

Analyte	Maximum Concentration	Action Level
Arsenic	2.24 µg/L	0.56 mg/kg

An action level of 5X the maximum concentration was used to evaluate the sample data for blank contamination. Sample aliquot, percent solids and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Arsenic was qualified due to laboratory blank contamination.

Notes

Non-detected arsenic results were not reported down to both the method detection limit (MDL) and the method reporting limit (MRL) on Form I reports as requested in the laboratory scope-of-work and required by the state of Florida. Non-detects were reported down to the MRL on Form I reports. The laboratory correctly reported the non-detected arsenic results down to the MDL in the electronic data deliverable (EDD).

The arsenic result on the laboratory method blank form was not reported down to the MDL.

The laboratory only reported to one significant figure for all non-detected results.

Sample JAX47-SB065-01-112806 was analyzed at a 5X dilution due to matrix interference according to the laboratory. The elevated detection limit for the non-detected arsenic result in sample JAX47-SB065-01-112806 is due to the 5X dilution.

Executive Summary

Laboratory Performance: Arsenic was qualified due to laboratory blank contamination.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Data Review", July 2002, and the Department of Defense (DoD) document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (January 2006).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the DoD QSM and the Quality Assurance Project Plan (QAPP)."

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C – Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

Metals

Method: The samples were extracted by USEPA Method 3050B and analyzed by 6010B Method for soils upon receipt to the laboratory in satisfactory condition.
Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- JAX47-SB065-01-112806 was re-run as a dilution due to matrix interference.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures.

OVERVIEW

The sample set for CTO 047, NAS Jacksonville, SDG BR006-006 consists of twelve (12) environmental soil samples. All above soil samples were analyzed for Target Compound List (TCL) organochlorine pesticides (PEST).

The samples were collected by TetraTech NUS on November 28 and 29, 2006 and analyzed by Environmental Conservation Laboratories, Inc. All analyses were conducted in accordance with Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria using SW-846 Method 8081A analytical and reporting protocols. The data contained in this SDG were validated with regard to the following parameters:

* • Data completeness
• Holding times
• Initial and continuing calibration
• Blank results
• Surrogate spike recoveries
* • Blank Spike/Blank Spike Duplicate Results
• Matrix Spike/Matrix Spike Duplicate Results
* • Detection Limits
* • Compound Quantitation
* • Compound Identification

The symbol (*) indicates that all quality control criteria were met for this parameter. Problems affecting data quality are discussed below; documentation supporting these findings is presented in Appendix C. Qualified Analytical results are presented in Appendix A. Results as reported by the laboratory are presented in Appendix B.

Pesticides

The laboratory reported down to Method Reporting Limits (MRL) on all Form Is for all compounds instead of to Method Detection Limits (MDLs). However, MDLs were included in the database for all compounds and these limits were used for validation.

The holding time limit of 14 days for sample extraction was exceeded for sample JAX47-SB086-06-112906. Positive and nondetect results in the sample were qualified estimated (J) and (UJ) for this noncompliance.

The following compounds was detected in the method blank prepared on 12/14/06 on column 1 and column 2 at the following maximum concentration:

Compound	Maximum Concentration	Action Level
4,4'DDT	0.300 ug/kg	1.50 ug/kg

An action level of 5X the maximum contaminant concentration was established to evaluate blank contamination for this compound.

Only sample JAX47-SB086-06-112906 was affected buy this noncompliance and was qualified nondetect (U) for blank contamination.

The dual column confirmation was noncompliant for at least one compound analyzed for every sample with the exception of JAX47-SB094-06-112806. The affected compounds in all other samples were qualified as estimated (J).

The continuing calibration performed on 12/14/06 at 03:47 on instrument JSVGCECD2 yielded a %D that exceeded the 15% quality control criterion for methoxychlor on column 1. Samples JAX47-SB095-06-112806 and JAX47-SB097-01-112806 had a positive result for methoxychlor reported on column 1 and were qualified estimated (J) for this noncompliance.

The continuing calibration performed on 12/14/06 at 08:33 on instrument JSVGCECD2 yielded a %D that exceeded the 15% quality control criterion for and 4,4'DDT and methoxychlor on column 1 and methoxychlor on column 2. No actions were taken as no positive results were reported for 4,4'DDT in any of the samples and because the noncompliance occurred on only one column. Positive results for methoxychlor were qualified estimated (J) and nondetect results were qualified estimated (UJ) in the associated samples for this noncompliance.

The continuing calibration performed on 12/20/06 at 11:59 on instrument JSVGCECD2 yielded a %D that exceeded the 15% quality control criterion for and 4,4'DDT on column 1 and on column 2. No action was taken due qualification for other noncompliance on sample JAX47-SB086-06-112906. Furthermore, %Ds exceeded the 15% quality control criterion for alpha-BHC, gamma- BHC, beta- BHC, delta- BHC, heptachlor, aldrin, heptachlor epoxide, chlordane-gamma, chlordane-alpha and endrin ketone. No actions were taken because this noncompliance occurred on only column 2.

The continuing calibration performed on 12/20/06 at 16:23 on instrument JSVGCECD2 yielded a %D that exceeded the 15% quality control criterion for 4,4'DDT on column 1 and on column 2. No action was taken for this noncompliance in sample JAX47-SB086-06-112906.

The continuing calibration performed on 12/27/06 at 10:46 on instrument JSVGCECD2 yielded a %D that

exceeded the 15% quality control criterion for 4,4'DDT and methoxychlor on column 1 and on column 2. The result for 4,4'DDT in sample JAX47-SB095-01-112806 was qualified estimated (J) for this noncompliance. No actions were taken due to this noncompliance for methoxychlor since it was not reported from this analysis.

The continuing calibration performed on 12/27/06 at 15:13 on instrument JSVGCECD2 yielded a %D that exceeded the 15% quality control criterion for 4,4'DDT and endosulfan II on column 1 and on column 2. The result for 4,4'DDT in sample JAX47-SB095-01-112806 was qualified estimated (J) for this noncompliance. The nondetect result for endosulfan II was qualified estimated (UJ) in sample JAX47-SB095-01-112806 for this noncompliance.

The continuing calibration performed on 01/05/07 at 17:07 on instrument JSVGCECD2 yielded a %D that exceeded the 15% quality control criterion for 4,4'DDT on column 1 and on column 2. Positive results for 4,4'DDT were qualified estimated (J) for this noncompliance.

The surrogate recovery for tetrachloro-m-xylene (TCX) was low for samples JAX47-SB094-06-112806, JAX47-SB095-01-112806 and JAX47-SB085-05-112906. Positive and nondetect results were qualified estimated (J) and (UJ) for this noncompliance.

The surrogate recovery for tetrachloro-m-xylene (TCX) and decachlorobiphenyl (DCB) was low and high respectively for sample JAX47-SB094-01-112806. No action was taken because the reported results were from the other column.

The surrogate recovery for decachlorobiphenyl (DCB) was high for sample JAX47-SB095-01-112806. Affected results were qualified estimated (J) for this noncompliance.

The MS/MSD analyses included within this SDG were not performed on a sample in this SDG. No action was taken for this noncompliance.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Dual column confirmation noncompliance. MDL versus RL issues on Form Is.
Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (10/99) and Department of Defense document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (January 2006). The text of this report has been formulated to address only those problem areas affecting data quality.

TO: MARK PETERSON – PAGE 4
DATE: MARCH 6, 2007

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the DoD QSM for guidelines and the Quality Assurance Project Plan (QAPP)."

APPENDIX C

SUPPORT DOCUMENTATION

Metals

Method: The samples were extracted by USEPA Method 3050B and analyzed by EPA Method 6010B. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications.

Semi-volatiles

Method: The samples were extracted/analyze by USEPA SW-846 Methods 3545/8081a. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- The Matrix Spike and Matrix Spike Duplicate were outside the DoD QSM control limits due to the sample matrix.
- The surrogate 2,4,5,6-TCMX for JAX47-SB094-06-112806 and JAX47-SB085-05-112906 was outside the DoD QSM control limits, however the surrogate was within the laboratory established control limits which are 54-153 for primary column and 55-152 for secondary column.
- The surrogate recovery for JAX47-SB095-01-112806 was outside the DoD QSM control limits due to sample matrix.
- JAX47-SB086-06-112906 was re-extracted outside of the method established hold time. Re-extraction was necessary due to the lack of surrogate noted in the primary extraction.
- CCVF was outside of DoD QSM control limits for 4,4-DDT, therefore results for this compound in any samples should be considered estimated.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures.

Overview

The sample set for NAS Jacksonville, CTO 047, SDG BR006-006, consists of twenty solid environmental samples.

All of the samples were analyzed for arsenic. The samples were collected by Tetra Tech NUS on November 28-29, 2006 and analyzed by Environmental Conservation Laboratories, Inc. Arsenic analyses were conducted using SW-846 method 6010B.

These data were evaluated based on the following parameters:

* • Data Completeness
* • Holding Times
* • Calibration Recoveries
• Laboratory Method/Preparation Blank Analyses
* • ICP Interference Check Sample Result
* • Matrix Spike Recoveries
* • Laboratory Control Sample Recoveries
• Detection Limits
* • Analyte Quantitation

* - All quality control criteria were met for this parameter.

Laboratory Method/Preparation Blank Analyses

The following contaminant was detected in the laboratory method/preparation blank at the following maximum concentration:

Analyte	Maximum Concentration	Action Level
Arsenic [1]	0.15 mg/kg	0.75 mg/kg

[1] Maximum contaminant level detected in the laboratory method blank.

An action level of 5X the maximum concentration was used to evaluate the sample data for blank contamination. Sample aliquot, percent solids and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Arsenic was qualified due to laboratory blank contamination.

Notes

Non-detected arsenic results were not reported down to both the method detection limit (MDL) and the method reporting limit (MRL) on Form I reports as requested in the laboratory scope-of-work and required by the state of Florida. Non-detects were reported down to the MRL on Form I reports. The laboratory correctly reported the non-detected arsenic results down to the MDL in the electronic data deliverable (EDD).

The laboratory only reported non-detected results to one significant figure.

The arsenic result on the laboratory method blank form was not reported down to the MDL.

Executive Summary

Laboratory Performance: Arsenic was qualified due to laboratory blank contamination.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Data Review", July 2002, and the Department of Defense (DoD) document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (January 2006).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the DoD QSM and the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C – Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

Metals

Method: The samples were extracted by USEPA Method 3050B and analyzed by EPA Method 6010B. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications.

Semi-volatiles

Method: The samples were extracted/analyze by USEPA SW-846 Methods 3545/8081a. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- The Matrix Spike and Matrix Spike Duplicate were outside the DoD QSM control limits due to the sample matrix.
- The surrogate 2,4,5,6-TCMX for JAX47-SB094-06-112806 and JAX47-SB085-05-112906 was outside the DoD QSM control limits, however the surrogate was within the laboratory established control limits which are 54-153 for primary column and 55-152 for secondary column.
- The surrogate recovery for JAX47-SB095-01-112806 was outside the DoD QSM control limits due to sample matrix.
- JAX47-SB086-06-112906 was re-extracted outside of the method established hold time. Re-extraction was necessary due to the lack of surrogate noted in the primary extraction.
- CCVF was outside of DoD QSM control limits for 4,4-DDT, therefore results for this compound in any samples should be considered estimated.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures.

OVERVIEW

The sample set for CTO 047, NAS Jacksonville, SDG BR006-007 consists of twenty (20) environmental soil samples. All above soil samples were analyzed for Target Compound List (TCL) organochlorine pesticides (PEST).

The samples were collected by TetraTech NUS on November 29, 2006 and analyzed by Environmental Conservation Laboratories, Inc. All analyses were conducted in accordance with Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria using SW-846 Method 8081A analytical and reporting protocols. The data contained in this SDG were validated with regard to the following parameters:

* • Data completeness
* • Holding times
• Initial and continuing calibration
• Blank results
• Surrogate spike recoveries
• Blank Spike/Blank Spike Duplicate Results
• Matrix Spike/Matrix Spike Duplicate Results
* • Detection Limits
• Compound Quantitation
* • Compound Identification

The symbol (*) indicates that all quality control criteria were met for this parameter. Problems affecting data quality are discussed below; documentation supporting these findings is presented in Appendix C. Qualified Analytical results are presented in Appendix A. Results as reported by the laboratory are presented in Appendix B.

Pesticides

The laboratory reported down to Reporting Limits (RL) on all Form Is for all compounds instead of to Method Detection Limits (MDLs). However, MDLs were included in the database for all compounds and these limits were used for validation.

The following compound was detected in the method blank associated with batch 6L08005 prepared on 12/08/06:

Compound	Maximum Concentration	Action Level
4,4'DDT	0.467 ug/kg	2.34 ug/kg

An action level of 5X the maximum contaminant concentration was established to evaluate blank contamination for this compound.

The following compound was detected in the method blank 6L14027 prepared on 12/14/06:

Compound	Maximum Concentration	Action Level
4,4'DDT	0.300 ug/kg	1.50 ug/kg

An action level of 5X the maximum contaminant concentration was established to evaluate blank contamination for this compound.

The continuing calibration performed on 12/14/06 at 22:09 on instrument JSVGCECD2 yielded a %D that exceeded the 15% quality control criterion for methoxychlor on both columns. No action was taken for this noncompliance because no results were reported for methoxychlor in the associated analysis sequence.

The continuing calibration performed on 12/15/06 at 02:55 on instrument JSVGCECD2 yielded a %D that exceeded the 15% quality control criterion for methoxychlor and 4,4'DDT on both columns. No action was taken for this noncompliance because no results were reported for methoxychlor or 4,4'DDT in the associated analysis sequence.

The continuing calibration performed on 12/15/06 at 07:40 on instrument JSVGCECD2 yielded a %D that exceeded the 15% quality control criterion for endosulfan sulfate on column 1 and on both columns for methoxychlor and 4,4'DDT. No action was taken for these noncompliances because the %D was only exceeded on one column for endosulfan sulfate and no results were reported for methoxychlor or 4,4'DDT in the associated analysis sequence.

The continuing calibration performed on 12/15/06 at 09:49 on instrument JSVGCECD2 yielded a %D that exceeded the 15% quality control criterion on both columns for methoxychlor and 4,4'DDT. No action was taken for this noncompliance because no results were reported for methoxychlor or 4,4'DDT in the associated analysis sequence.

The continuing calibration performed on 12/20/06 at 11:59 on instrument JSVGCECD2 yielded a %D that exceeded the 15% quality control criterion for 4,4'DDT and endrin ketone on column 1 and on column 2. The result for 4,4'DDT in sample JAX47-SB111-05-112906 was affected by this noncompliance; however, no action was taken due to qualification of this sample for lab blank contamination. No action was taken for endrin ketone for this noncompliance in the associated samples.

The continuing calibration performed on 12/20/06 at 18:06 on instrument JSVGCECD2 yielded a %D that exceeded the 15% quality control criterion on both columns for methoxychlor and 4,4'DDT. No action was taken for 4,4'DDT for this noncompliance because no results were reported in the associated analysis sequence. However, the result for methoxychlor was qualified nondetect estimated (UJ) in sample JAX47-SB111-05-112906 for this noncompliance.

The continuing calibration performed on 1/10/07 at 13:14 on instrument JSVGCECD2 yielded a %D that exceeded the 15% quality control criterion for methoxychlor, gamma-chlordane, alpha-chlordane, 4,4'DDE and endosulfan I on column 1 and on column 2. The result for methoxychlor in samples JAX47-SB093-01-112906, JAX47-SB108-01-112906 and JAX47-SB109-01-112906 were affected by this noncompliance and positive results qualified estimated (J). No action was taken for gamma-chlordane, alpha-chlordane, 4,4'DDE and endosulfan I because these compounds were not reported during this analysis sequence.

The surrogate recovery for tetrachloro-m-xylene (TCX) was low for samples JAX47-SB092-01-112906, JAX47-SB092-06-112906, JAX47-SB093-01-112906, JAX47-SB101-05-112906, JAX47-SB103-01-112906, JAX47-SB112-01-112906 and JAX47-SB112-05-112906. Positive results were qualified estimated (J) and nondetects were qualified estimated (UJ).

The calibration range performed on 1/10/07 at 00:29 on instrument JSVGCECD2 for 4,4'-DDT for sample JAX47-SB104-01-112906 was exceeded. The result was qualified estimated (J) for this noncompliance.

The dual column confirmation %D was greater than the 25% QC limit for at least one compound analyzed on 11 out of the 20 samples. The affected results were qualified as estimated (J) for this noncompliance. Compounds that were note confirmed by the second column were qualified nondetected and estimated (UJ).

The results for gamma-BHC, endosulfan sulfate and endosulfan I in sample JAX47-SB092-01-112906 were not confirmed on both columns and were qualified nondetected and estimated (UJ) for this noncompliance.

The result for gamma-BHC in sample JAX47-SB093-01-112906 was not confirmed on both columns and was qualified nondetected and estimated (UJ) for this noncompliance.

The result for gamma-chlordane in sample JAX47-SB093-06-112906 was not confirmed on both columns and was qualified nondetected and estimated (UJ) for this noncompliance.

The result for gamma-chlordane in sample JAX47-SB103-01-112906 was not confirmed on both columns and was qualified nondetected and estimated (UJ) for this noncompliance.

The result for gamma-chlordane in sample JAX47-SB104-05-112906 was not confirmed on both columns and was qualified nondetected and estimated (UJ) for this noncompliance.

The result for heptachlor epoxide in sample JAX47-SB109-06-112906 was not confirmed on both columns and was qualified nondetected and estimated (UJ) for this noncompliance.

The result for endosulfan sulfate in sample JAX47-SB111-01-112906 was not confirmed on both columns and was qualified nondetected and estimated (UJ) for this noncompliance.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Several calibration noncompliances were noted. Several dual column confirmation noncompliances were noted. Seven samples were qualified due to surrogate recovery noncompliances. MDLs were not summarized on sample Form Is.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (10/99) and Department of Defense document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (January 2006). The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the DoD QSM for guidelines and the Quality Assurance Project Plan (QAPP)."

Comments:

Metals

Method: The samples were extracted by USEPA Method 3050B and analyzed by EPA Method 6010B. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- JAX47-SB104-01-112906 was re-run as a dilution due to matrix interference.

Semi-volatiles

Method: The samples were extracted/analyze by USEPA SW-846 Methods 3545/8081. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- Surrogate 2,4,5,6-TCMX for JAX47-SB092-01-112906, JAX47-SB092-06-112906, JAX47-SB093-01-112906, JAX47-SB101-05-112906, JAX47-SB103-01-112906, JAX47-SB112-01-112906, JAX47-SB112-05-112906 were outside the DoD QSM control limits. The data was accepted based on the surrogate DBC being within the DoD QSM control limits.
- Methoxychlor for Continuing Calibration Verification Standard resulted outside and below the DoD QSM limit. Any sample result associated with this standard/compound is considered to be estimated bias low.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures.

SUBJECT: **INORGANIC & ORGANIC DATA VALIDATION – ARSENIC & PESTICIDES**
NAS JACKSONVILLE – CTO 047
SDG – BR006-007

SAMPLES: 2/Soil/BR006-007

JAX47-SB093-01-112906 JAX47-SB104-01-112906

Overview

The sample set for NAS Jacksonville, CTO 047, SDG BR006-007, consists of two soil environmental samples.

Both samples were analyzed for arsenic and organochlorine pesticides (PEST) via the synthetic precipitation leaching procedure (SPLP). The samples were collected by Tetra Tech NUS on November 29, 2006 and analyzed by Environmental Conservation Laboratories, Inc. SPLP extractions, arsenic and PEST analyses were conducted using SW-846 methods 1312, 6010B and 8081, respectively.

These data were evaluated based on the following parameters:

* • Data Completeness
* • Holding Times
* • Calibration Recoveries
* • Laboratory Method/Preparation Blank Analyses
* • ICP Interference Check Sample Result
• Matrix Spike/Matrix Spike Duplicate Recoveries
* • Laboratory Control Sample Recoveries
• Detection Limits
* • Analyte Quantitation

* - All quality control criteria were met for this parameter.

The percent difference (%D) between columns exceeded 100% for the following compounds:

Sample	Compound	%D	QUAL
JAX47-SB093-01-112906	Alpha-Chlordane	467	J
	Dieldrin	350	J
JAX47-SB104-01-112906	Alpha-Chlordane	280	J
	Dieldrin	333	J

Positive results with a %D > 100% were qualified as estimated, "J".

Notes

Several results were qualified as estimated, "J", due to uncertainty near the detection limit.

Non-detected arsenic and pesticide results were not reported down to both the method detection limit (MDL) and the method reporting limit (MRL) on Form I reports as requested in the laboratory scope-of-work and required by the state of Florida. Non-detects were reported down to the MRL on Form I reports. The laboratory correctly reported the non-detected arsenic and pesticide results down to the MDL in the electronic data deliverable (EDD).

The arsenic and pesticide results on the laboratory method blank forms were not reported down to the MDL.

The laboratory only reported to one significant figure for all non-detected results.

The matrix spike (MS) and matrix spike duplicate (MSD) percent recoveries for alpha-chlordane and gamma-chlordane were greater than the respective upper quality control limits of those compounds in sample JAX47-SB089-02-113006. No data was qualified because the MS and MSD were performed on a sample (JAX47-SB089-02-113006) that was not analyzed in this SDG.

Executive Summary

Laboratory Performance: The laboratory did not report method detection limits on the Form I reports as requested in the laboratory statement-of-work and required by the state of Florida.

Other Factors Affecting Data Quality: The percent difference between columns non-compliance resulted in the estimation of several pesticide results.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Data Review", October 2004, the "National Functional Guidelines for Organic Data Review", October 1999, and the Department of Defense (DoD) document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (January 2006).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the DoD QSM and the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C – Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

Metals

Method: The samples were extracted by USEPA Method 1312/3050B and analyzed by EPA Method 6010B. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications.

Semi-volatiles

Method: The samples were extracted/analyze by USEPA SW-846 Methods 1312/3545/8081A. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- Matrix Spike and Matrix Spike Duplicate were outside the DoD QSM control limits.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Overview

The sample set for NAS Jacksonville, CTO 047, SDG BR006-007, consists of two (2) leachate and twenty (20) soil environmental samples. No field duplicate pairs were included in this SDG.

All samples were analyzed for arsenic. The samples were collected by Tetra Tech NUS, Inc. on November 29, 2006 and analyzed by Environmental Conservation Laboratories, Inc. Arsenic analyses were conducted using EPA methods 1312/3050B and 6010B methodologies.

These data were evaluated based on the following parameters:

* • Data Completeness
* • Holding Times
* • Calibration Recoveries
* • Laboratory Method/Preparation Blank Analyses
* • ICP Interference Check Sample Results
* • Matrix Spike / Matrix Spike Duplicate Recoveries
* • Laboratory Control Sample Recoveries
* • Detection Limits
* • Analyte Quantitation

* - All quality control criteria were met for this parameter.

Notes

Arsenic reported for sample JAX47-SB104-01-112906 was analyzed at a 5X dilution.

Executive Summary

Laboratory Performance: None.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines *for Inorganic Data Review*", *October 2004*.

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

Appendix A
Qualified Analytical Results

Data Validation Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

Appendix C
Support Documentation

Metals

Method: The samples were extracted by USEPA Method 1312/3050B and analyzed by EPA Method 6010B. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications.

Semi-volatiles

Method: The samples were extracted/analyze by USEPA SW-846 Methods 1312/3545/8081A. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- Matrix Spike and Matrix Spike Duplicate were outside the DoD QSM control limits.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following *signatures*.

Metals

Method: The samples were extracted by USEPA Method 3050B and analyzed by EPA Method 6010B. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- JAX47-SB104-01-112906 was re-run as a dilution due to matrix interference.

Semi-volatiles

Method: The samples were extracted/analyze by USEPA SW-846 Methods 3545/8081. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- Surrogate 2,4,5,6-TCMX for JAX47-SB092-01-112906, JAX47-SB092-06-112906, JAX47-SB093-01-112906, JAX47-SB101-05-112906, JAX47-SB103-01-112906, JAX47-SB112-01-112906, JAX47-SB112-05-112906 were outside the DoD QSM control limits. The data was accepted based on the surrogate DBC being within the DoD QSM control limits.
- Methoxychlor for Continuing Calibration Verification Standard resulted outside and below the DoD QSM limit. Any sample result associated with this standard/compound is considered to be estimated bias low.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures.

OVERVIEW

The sample set for NAS Jacksonville CTO 047, SDG BR006-010 consists of ten (10) environmental soil samples and four (4) leachates. All soil and leachates samples were analyzed for pesticide compounds (PEST).

The samples were collected by Tetra Tech NUS, Inc. on November 29 and 30, 2006 and analyzed by Environmental Conservation Laboratory (ENCO). All analyses were conducted in accordance with SW-846 Methods 8081A analysis and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters:

*	• Data completeness
*	• Holding times
*	• GC/MS Tuning
	• Initial and continuing calibration
	• Blank results
	• Surrogate spike recoveries
*	• Blank Spike/Blank Spike Duplicate Results
	• Matrix Spike/Matrix Spike Duplicate Results
*	• Detection Limits
*	• Compound Quantitation
*	• Compound Identification

The symbol (*) indicates that quality control criteria were met for this parameter. Problems affecting data quality are discussed below; documentation supporting these findings is presented in Appendix C. Qualified Analytical results are presented in Appendix A. Results as reported by the laboratory are presented in Appendix B.

PEST

The following compounds were detected in the method blanks at the following maximum concentrations:

Compound	Maximum Concentration	Action Level
4,4'-DDT	0.000300 mg/kg	0.0015 mg/kg

Action levels of 5X the maximum contaminant concentration were established to evaluate blank contamination. Dilution factors and sample aliquots were taken into consideration during the application of all action levels. Positive results for these compounds were qualified undetected (U).

The matrix spike/matrix spike duplicate (MS/MSD) performed on sample JAX47-SB089-02-113006 had percent recoveries (%Rs) less than the quality control limit for 4,4'-DDE, dieldrin, alpha and gamma-chlordane in the both MS and MSD. The %Rs were greater than the quality control limit for beta-BHC, 4,4'-DDT, and 4,4'-DDD in both the MS and MSD. The MS %Rs and RPD were greater than the quality control limits for heptachlor and endrin. The positive results for dieldrin, alpha and gamma- chlordane were qualified as estimated (J) in sample JAX47-SB089-02-113006. Positive results for beta-BHC, 4,4'-DDT, 4,4'-DDD, and heptachlor were qualified as estimated (J) in sample JAX47-SB089-02-113006. No action was taken for endrin because it was not detected. Nondetects are not impacted by high %Rs and RPDs.

The laboratory also provided MS/MSD results for samples JAX47-SB100-01-11306 JAX47-SB110-01-113006 however these samples were not included in this SDG. Therefore, the MS/MSD results were not evaluated.

The surrogate %Rs for decachlorobiphenyl on column 1 and 2 were 10% or lower in sample JAX47-SB089-02-113006. It is likely that the very low %Rs were due to interference. Positive and nondetected results in this sample were qualified as estimated (J) and (UJ), respectively.

The surrogate %Rs for tetrachloro-m-xylene on column 1 was low and decachlorobiphenyl on columns 1 and 2 were high in sample JAX47-SB096-01-113006. Positive and nondetected results in this sample were qualified as estimated (J) and (UJ), respectively.

The surrogate %Rs for decachlorobiphenyl on column 1 was high and tetrachloro-m-xylene on columns 1 and 2 were low in sample JAX47-SB099-01-113006. Positive and nondetected results in this sample were qualified as estimated (J) and (UJ), respectively.

The continuing calibrations performed on 12/14/06 at 3:47 and 8:33 on instrument JSVGCECD2 yielded a few %Ds that exceeded the 15%, however only quality control samples were impacted by these calibrations. Therefore,, no actions were warranted as no environmental samples were impacted by this noncompliance.

The continuing calibration performed on 12/23/06 at 7:11 on instrument JSVGCECD2 yielded %Ds that exceeded the 15% quality control criterion for beta-BHC and delta-BHC on both columns. The positive and nondetected results reported for these compounds were qualified as estimated (J) and (UJ) respectively, in samples JAX47-SB089-02-113006, JAX47-SB089-05-113006, JAX47-SB096-01-113006, JAX47-SB098-01-113006, and JAX47-SB098-05-113006.

The continuing calibration performed on 12/23/06 at 10:12 on instrument JSVGCECD2 yielded %Ds that exceeded the 15% quality control criterion for heptachlor, endrin, 4,4'-DDD, 4,4'-DDT, endrin aldehyde, and methoxychlor on both columns. The positive and nondetected results reported for these compounds in samples JAX47-SB089-02-113006, JAX47-SB089-05-113006, JAX47-SB096-01-113006, JAX47-SB098-01-113006, and JAX47-SB098-05-113006 were qualified as estimated (J) and (UJ), respectively.

The continuing calibration performed on 12/26/06 at 21:53 on instrument JSVGCECD2 yielded %Ds that exceeded the 15% quality control criterion for methoxychlor on both columns. No actions were warranted as methoxychlor results were not reported from the dilution analysis of JAX47-SB096-05-113006RE1

The continuing calibration performed on 12/27/06 at 10:46 on instrument JSVGCECD2 yielded %Ds that exceeded the 15% quality control criterion for 4,4'-DDT and methoxychlor on both columns. No actions were

warranted for methoxychlor because this compound was not reported from the dilution analysis of JAX47-SB096-01-113006RE3. The positive result for 4,4'-DDT was qualified as estimated (J) in the dilution analysis of JAX47-SB096-01-113006RE3.

The continuing calibration performed on 12/27/06 at 15:13 on instrument JSVGCECD2 yielded %Ds that exceeded the 15% quality control criterion for heptachlor epoxide, gamma-chlordane, alpha-chlordane, 4,4'-DDE, endosulfan I, dieldrin, endosulfan II, 4,4'-DDT, endrin aldehyde, and methoxychlor on both columns. No actions were warranted for any of these compounds except 4,4'-DDT because these compounds were not reported from the dilution analysis of JAX47-SB096-01-113006RE3. The positive result for 4,4'-DDT was qualified as estimated (J) in the dilution analysis of JAX47-SB096-01-113006RE3.

The continuing calibrations performed on 1/16/07 at 1:49 and 3:07 on instrument JSVGCECD2 yielded %Ds that exceeded the 15% quality control criterion for beta-bHC and delta-BHC on both columns. No actions were warranted as results for these compounds were not reported from the dilution analysis of JAX47-SB089-02-113006RE3.

The continuing calibration performed on 12/15/06 at 18:34 on instrument JSVGCECD2 yielded %Ds that exceeded the 15% quality control criterion for heptachlor, alpha-chlordane, 4,4'-DDT, and methoxychlor on both columns and heptachlor epoxide, gamma-chlordane, endosulfan I, endrin, 4,4'-DDD, endosulfan II, and endrin ketone on column 2. The positive and nondetected results reported for heptachlor, and alpha-chlordane in samples JAX47-SB113-01-112906 and JAX47-SB113-06-112906 were qualified as estimated (J) and (UJ), respectively.

The continuing calibration performed on 12/15/07 at 23:19 on instrument JSVGCECD2 yielded %Ds that exceeded the 15% quality control criterion for alpha-chlordane, 4,4'-DDT, endrin aldehyde, and methoxychlor on both columns and heptachlor, gamma-chlordane, endosulfan I, and dieldrin on column 1. The positive and nondetected results reported for alpha-chlordane, and endrin aldehyde in samples JAX47-SB113-01-112906 and JAX47-SB113-06-112906 were qualified as estimated (J) and (UJ), respectively.

The continuing calibrations performed on 1/18/07 at 11:45 and 13:54 on instrument JSVGCECD2 yielded %Ds that exceeded the 15% quality control criterion for a few compounds on column 1. No actions were warranted as no environmental samples were analyzed under these calibrations.

The continuing calibration performed on 12/20/06 at 11:59 on instrument JSVGCECD2 yielded %Ds that exceeded the 15% quality control criterion for endrin ketone on both columns and alpha-BHC, gamma-BHC, beta-BHC, delta-BHC, heptachlor, aldrin, heptachlor epoxide, gamma-chlordane, alpha-chlordane, and 4,4'-DDT on column 2. The positive results reported for 4,4'-DDT in samples JAX47-SB099-05-113006RE1 and JAX47-SB099-01-113006RE1 were qualified as estimated (J). No actions were warranted for the remaining parameters because %Ds were noncompliant on only one column.

The continuing calibration performed on 12/20/06 at 16:23 on instrument JSVGCECD2 yielded %Ds that exceeded the 15% quality control criterion for 4,4'-DDT on both columns and heptachlor, heptachlor epoxide, gamma-chlordane, alpha-chlordane, endosulfasn II, 4,4'-DDT, and endrin ketone on column 2. The positive results reported for 4,4'-DDT in samples JAX47-SB099-05-113006RE1 and JAX47-SB099-01-113006RE1 were qualified as estimated (J). No actions were warranted for the remaining compounds as they were not detected and were noncompliant on only one column.

The continuing calibration performed on 12/20/06 at 18:06 on instrument JSVGCECD2 yielded %Ds that exceeded the 15% quality control criterion for methoxychlor and 4,4'-DDT on both columns. No actions were warranted as no environmental samples were run under this calibration.

Sample JAX47-SB089-02-113006 was reanalyzed at a 20-fold dilution because the concentrations of beta-BHC, gamma-chlordane, alpha-chlordane, 4,4'-DDE, dieldrin, 4,4'-DDD, and 4,4'-DDT were in excess of the linear calibration range of the instrument in the original sample analysis. Results for the aforementioned compounds (except 4,4'-DDT) were reported from the 20-fold dilution analysis. The sample required a further 200-fold dilution as 4,4'-DDT concentrations were still in excess of the calibration range in the 20-fold dilution. 4,4'-DDT was reported from the 200-fold dilution.

Sample JAX47-SB089-05-113006 was reanalyzed at a 10-fold dilution because the concentrations of beta-BHC and delta-BHC were in excess of the linear calibration range of the instrument in the original sample analysis.

Results for the aforementioned compounds were reported from the 10-fold dilution analysis.

Sample JAX47-SB096-01-113006 was reanalyzed at a 50-fold dilution because the concentrations of heptachlor, heptachlor epoxide, endosulfan I, dieldrin, endrin, endosulfan II, endrin aldehyde, methoxychlor, endosulfan sulfate, gamma-chlordane, alpha-chlordane, 4,4'-DDE, 4,4'-DDD, and 4,4'-DDT were in excess of the linear calibration range of the instrument in the original sample analysis. Results for the aforementioned compounds (except gamma-chlordane, alpha-chlordane, 4,4'-DDE, 4,4'-DDD, and 4,4'-DDT) were reported from the 50-fold dilution analysis. The sample required a further 500-fold dilution as gamma-chlordane, alpha-chlordane, 4,4'-DDE, and 4,4'-DDD concentrations were still in excess of the calibration range in the 50-fold dilution. Gamma-Chlordane, alpha-chlordane, 4,4'-DDE, and 4,4'-DDD were reported from the 200-fold dilution. 4,4'-DDT was still in excess of the calibration range in the 500-fold dilution, hence the sample was analyzed one final time at a 200000-fold dilution in order to bring 4,4'-DDT into the calibration range, only 4,4'-DDT was reported from the 200000-fold analysis.

Sample JAX47-SB096-05-113006 was reanalyzed at a 20-fold dilution because the concentrations of 4,4'-DDT was in excess of the linear calibration range of the instrument in the original sample analysis. The result for 4,4'-DDT was reported from the 20-fold dilution analysis.

Sample JAX47-SB099-01-113006 was reanalyzed at a 20-fold dilution because the concentrations of heptachlor epoxide, gamma-chlordane, alpha-chlordane, dieldrin, 4,4'-DDD, 4,4'-DDE, and 4,4'-DDT were in excess of the linear calibration range of the instrument in the original sample analysis. Results for the aforementioned compounds (except 4,4'-DDE and 4,4'-DDT) were reported from the 20-fold dilution analysis. The sample required a further 200-fold dilution as 4,4'-DDT and 4,4'-DDE concentrations were still in excess of the calibration range in the 20-fold dilution. 4,4'-DDT and 4,4'-DDE were reported from the 200-fold dilution.

Positive pesticide results were qualified as estimated (J) as a result of high percent differences (>100%) between analytical columns in the following:

Analyte	%D
JAX47-SB113-06-113006	
gamma-Chlordane	221.3
alpha-Chlordane	1276.9
JAX47-SB089-02-113006	
alpha-BHC	130.8
delta-BHC	1188.6
Heptachlor epoxide	318.3
Endrin ketone	118.8
JAX47-SB089-05-113006	
gamma-BHC	840.9
alpha-Chlordane	2440
JAX47-SB096-01-113006	
alpha-BHC	210.1
beta-BHC	2223.3
delta-BHC	1608.3
Endrin ketone	232.8
Heptachlor	870.9
Heptachlor Epoxide	108.7

Endosulfan I	1751.8
Endrin	346.5
Endrin aldehyde	259.5
Methoxychlor	925
JAX47-SB098-01-113006	
gamma-Chlordane	132.4
Dieldrin	250
JAX47-SB099-01-113006	
alpha-BHC	210
Methoxychlor	861.8
Endosulfan sulfate	386.5
Heptachlor epoxide	123.8
4,4'-DDD	111.8

Positive pesticide results were qualified as estimated (J) as a result of percent differences (>25% but less than 100%) between analytical columns in the following:

Analyte	%D
JAX47-SB113-06-113006	
delta-BHC	60
JAX47-SB089-02-113006	
Endosulfan II	85.1
Endosulfan sulfate	55.6
4,4'-DDD	82.6
JAX47-SB096-01-113006	
gamma-BHC	73.7
Endosulfan II	56.2
Endosulfan sulfate	73.7
4,4'-DDD	25.6
JAX47-SB096-05-113006	
4,4'-DDD	80.8
JAX47-SB098-05-113006	
4,4'-DDD	37.3
JAX47-SB099-01-113006	
beta-BHC	76.6
JAX47-SB099-05-113006	
Dieldrin	44.4
4,4'-DDD	40.5

SPLP PEST

The MS/MSD performed on sample JAX47-SB089-02-113006 had percent recoveries (%Rs) greater than the quality control limit for alpha and gamma- chlordane in the both MS and MSD. The positive results for alpha and gamma- chlordane were qualified as estimated (J) in sample JAX47-SB089-02-113006.

Sample JAX47-SB089-05-113006 was reanalyzed at a 20-fold dilution because the concentration of 4,4'-DDD was in excess of the linear calibration range of the instrument in the original sample analysis. The result for 4,4'-DDD was reported from the 20-fold dilution analysis.

Sample JAX47-SB096-01-113006 was reanalyzed at a 200-fold dilution because the concentration of 4,4'-DDT was in excess of the linear calibration range of the instrument in the original sample analysis. The result for 4,4'-DDT was reported from the 200-fold dilution analysis.

Positive pesticide results were qualified as estimated (J) as a result of high percent differences (>100%) between analytical columns in the following:

Analyte	%D
JAX47-SB089-02-113006	
Heptachlor Epoxide	246.2
gamma-Chlordane	340.9
alpha-Chordane	1705.3
4,4'-DDD	200
JAX47-SB089-05-113006	
gamma-Chlordane	200
alpha-Chordane	166.7
4,4'-DDE	475
JAX47-SB096-01-113006	
Heptachlor Epoxide	1030
alpha-Chordane	123.5
Endrin ketone	154.5
4,4'-DDD	319.7
JAX47-SB099-01-113006	
4,4'-DDD	125
alpha-Chordane	201.4

Positive pesticide results were qualified as estimated (J) as a result of percent differences (>25% but less than 100%) between analytical columns in the following:

Analyte	%D
JAX47-SB089-02-113006	
alpha-BHC	33.3
delta-BHC	33.3
JAX47-SB089-05-113006	
Heptachlor Epoxide	50
JAX47-SB096-01-113006	
Endosulfan sulfate	40
JAX47-SB099-01-113006	
Heptachlor Epoxide	39.4

Additional Comments:

Positive results less than the reporting limit (RL) were qualified as estimated (J), due to uncertainty near the detection limit.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Several pesticide compounds had noncompliant calibration %Ds. Several surrogate noncompliances were noted. Positive pesticide results were qualified as estimated due to high %Ds between analytical columns.

Other Factors Affecting Data Quality: Many samples required dilution. Several MS/MSD noncompliances were noted.

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (10/99). The text of this report has been formulated to address only those problem areas affecting data quality.

Metals

Method: The samples were extracted by USEPA Method 3050B and analyzed by EPA Method 6010B. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications.

Semi-volatiles

Method: The samples were extracted/analyze by USEPA SW-846 Methods 3545/8081A. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- The Matrix Spike and Matrix Spike Duplicate were outside the DoD QSM control limits due to the sample matrix.
- The surrogate recoveries for JAX47-SB089-02-113006, JAX47-SB096-01-113006, JAX47-SB099-01-113006 were outside the DoD QSM control limits due to sample matrix.
- 4,4-DDT for JAX47-SB096-01-113006 was run at 200,000 dilution factor. The Continuing Calibration Verification Standard result for 4,4-DDT was outside and below the DoD QSM limit, therefore the result associated with this standard/compound is considered to be estimated bias low.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures.

FLORIDA DATA QUALIFIERS

I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
*	Compound recovery outside of quality control limits.
L	Off-scale high. Actual value is known to be greater than value given. To be used when the concentration of the analyte is above the acceptable level for quantitation (exceeds the linear range of highest calibration standard) and the calibration curve is known to exhibit a negative deflection.
J	Estimated value. A justification will be included in the narrative for any result that has been flagged with a "J".
V	Indicates the analyte was detected in the sample and the associated method blank.
N	Presumptive evidence of a compound based on a mass spectral library search.
Q	Sample held beyond the accepted holding time. This code shall be used if the value is derived from a sample that was prepared or analyzed after the approved holding time restrictions for sample preparation or analysis
Y	The laboratory analysis was from an improperly preserved sample. The data may not be accurate.

CASE NARRATIVE

Tetra Tech NUS, Inc/NAS Jacksonville, CTO 047

Project Manger Mark Peterson

SDG BR006-008

Lab Sample ID	Client Sample ID
B610372-01	JAX47-SB089-02-113006
B610372-02	JAX47-SB089-05-113006
B610372-03	JAX47-SB096-01-113006
B610372-07	JAX47-SB099-01-113006

Metals

Method: The samples were extracted by USEPA Method 1312/3050B and analyzed by EPA Method 6010B. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications.

Semi-volatiles

Method: The samples were extracted/analyze by USEPA SW-846 Methods 1312/3545/8081A. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- The Matrix Spike and Matrix Spike Duplicate were outside the DoD QSM control limits.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures.

Overview

The sample set for NAS Jacksonville, CTO 047, SDG BR006-008, consists of ten soil environmental samples.

All samples were analyzed for arsenic. Four samples were also analyzed for arsenic via the synthetic precipitation leaching procedure (SPLP). The samples were collected by Tetra Tech NUS on November 29-30, 2006 and analyzed by Environmental Conservation Laboratories, Inc. SPLP extractions and arsenic analyses were conducted using SW-846 methods 1312 and 6010B, respectively.

These data were evaluated based on the following parameters:

* • Data Completeness
* • Holding Times
* • Calibration Recoveries
• Laboratory Method/Preparation Blank Analyses
* • ICP Interference Check Sample Result
* • Matrix Spike/Matrix Spike Duplicate Recoveries
* • Laboratory Control Sample Recoveries
• Detection Limits
* • Analyte Quantitation

* - All quality control criteria were met for this parameter.

Laboratory Method/Preparation Blank Analyses

The following contaminants were detected in the laboratory method/preparation blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Arsenic [1]	0.180 mg/kg	0.920 mg/kg

[1] Maximum contaminate level found in the soil prepartion method blank.

An action level of 5X the maximum concentration was used to evaluate the sample data for blank contamination. Sample aliquot, percent solids and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Arsenic was qualified due to laboratory blank contamination.

Notes

Non-detected arsenic results were not reported down to both the method detection limit (MDL) and the method reporting limit (MRL) on Form I reports as requested in the laboratory scope-of-work and required by the state of Florida. Non-detects were reported down to the MRL on Form I reports. The laboratory correctly reported the non-detected arsenic results down to the MDL in the electronic data deliverable (EDD).

The arsenic results on the laboratory method blank forms were not reported down to the MDL.

The laboratory only reported to one significant figure for all non-detected results.

Executive Summary

Laboratory Performance: Arsenic was qualified due to laboratory blank contamination.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Data Review", July 2002, and the Department of Defense (DoD) document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (January 2006).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the DoD QSM and the Quality Assurance Project Plan (QAPP)."

2. Appendix B - Results as reported by the Laboratory
3. Appendix C – Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

Metals

Method: The samples were extracted by USEPA Method 3050B and analyzed by EPA Method 6010B. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications.

Semi-volatiles

Method: The samples were extracted/analyze by USEPA SW-846 Methods 3545/8081A. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- The Matrix Spike and Matrix Spike Duplicate were outside the DoD QSM control limits due to the sample matrix.
- The surrogate recoveries for JAX47-SB089-02-113006, JAX47-SB096-01-113006, JAX47-SB099-01-113006 were outside the DoD QSM control limits due to sample matrix.
- 4,4-DDT for JAX47-SB096-01-113006 was run at 200,000 dilution factor. The Continuing Calibration Verification Standard result for 4,4-DDT was outside and below the DoD QSM limit, therefore the result associated with this standard/compound is considered to be estimated bias low.

Metals

Method: The samples were extracted by USEPA Method 1312/3050B and analyzed by EPA Method 6010B. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications.

Semi-volatiles

Method: The samples were extracted/analyze by USEPA SW-846 Methods 1312/3545/8081A. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- The Matrix Spike and Matrix Spike Duplicate were outside the DoD QSM control limits.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures.

JAX-47-937MW1S-112906	JAX-47-937MW5S-112906	JAX-47-EB03
JAX-47-EB04	JAX-47-MW15D-112906	JAX-47-MW15S-112906
JAX-47-937MW3S-112906	TRIP BLANK #3	TRIP BLANK #4

OVERVIEW

The sample set for NAS Jacksonville CTO 047, SDG BR006-009 consists of two (2) trip blanks, two (2) equipment blanks (JAX-47-EB03, JAX-47-EB04) and five (5) environmental water samples. All samples were analyzed as indicated above. The trip blanks were analyzed for VOCs only.

The samples were collected by TetraTech NUS on November 28 and 29, 2006 and analyzed by Environmental Conservation laboratories, Inc. All analyses were conducted in accordance with SW-846 Methods 8260B, 8270C and 8081A analysis and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters:

*	• Data completeness
*	• Holding times
*	• GC/MS Tuning
	• Initial and continuing calibration
*	• Blank results
*	• Surrogate spike recoveries
*	• Internal standard recoveries
	• Blank Spike/Blank Spike Duplicate Results
	• Matrix Spike/Matrix Spike Duplicate Results
*	• Detection Limits
*	• Compound Quantitation
	• Compound Identification

The symbol (*) indicates that quality control criteria were met for this parameter. Problems affecting data quality are discussed below; documentation supporting these findings is presented in Appendix C. Qualified Analytical results are presented in Appendix A. Results as reported by the laboratory are presented in Appendix B.

Volatiles

The following compound was detected in the method blanks at the following maximum concentration:

Compound	Maximum Concentration	Action Level
Acetone	7.36 ug/L	73.6 ug/L

An action level of 10X the maximum contaminant concentration (for acetone) was established to evaluate blank contamination. Dilution factors were taken into consideration during the application of all action levels. Positive results for acetone less than the Action Level were qualified nondetect (U). Field quality control blanks were not qualified for lab blank contamination.

The percent standard deviations (%RSDs) for bromomethane, methyl cyclohexane and bromoform were greater than the 30% quality control criterion. The nondetected results reported for these compounds were qualified estimated (UJ). Methyl cyclohexane was detected in sample JAX-47-MW15D-112906 and was qualified estimated (J).

The continuing calibration Percent Differences (%Ds) for bromomethane and tetrachloroethene were greater than 25% on instrument JVGCMS1 on 12/07/06. The nondetected results reported for bromomethane and tetrachloroethene were qualified as estimated (UJ). Positive results were qualified estimated (J) for samples JAX-47-937MW1S-112906, JAX-47-937MW5S-112906, JAX-47-937MW3S-112906 for tetrachloroethene.

The Laboratory Control Samples (LCS) 6L07026-BS1 had Percent Recoveries (%Rs) for dichlorofluoromethane, chloromethane, toluene, 1,2-dibromoethane, chlorobenzene, o-xylene, isopropylbenzene, 1,4-dichlorobenzene and 1,2-dichlorobenzene that were higher than the respective upper quality control limits. No action was taken in nondetected samples because the bias was high from the LCS. Sample JAX-47-937MW5S-1112906 was qualified estimated (J) for toluene, chlorobenzene, isopropyl benzene and 1,2 dichlorobenzene for this noncompliance. Samples JAX-47-EB03 and JAX-47-EB04 were qualified estimated (J) for toluene for this noncompliance. Sample JAX-47-937MW3S-1112906 was qualified estimated (J) for toluene, chlorobenzene and isopropylbenzene for this noncompliance.

The reported result for cis-1,2-dichloroethene in samples JAX-47-937MW3S-112906 and JAX-47-937MW5S-112906 had a 10X dilution applied. The reported result for total xylenes in sample JAX-47-937MW5S-112906 also had a 10X dilution applied.

SVOCs

The continuing calibration run on 12/05/06 at 11:34 on instrument JSVGCMS1 yielded %Ds greater than the 25% QC limit for 3-nitroaniline, 4-nitroaniline, 4-chloroaniline, 2,4-dinitrophenol and carbazole. The nondetected results reported for these compounds were qualified estimated (UJ).

The Laboratory Control Samples (LCS) 6L04001-BS1 had Percent Recoveries (%Rs) that were higher than the respective upper quality control limits for 4-chloroaniline, 3-nitroaniline, 4-nitoaniline, N-nitrosodiphenylamine and carbazole. No positive results were reported for these compounds, so no action was taken other than for previous qualifications listed above.

The reported results for 2,4,5-trichlorophenol and 2,4-dichlorophenol in sample JAX-47-937MW3S-112906 had dilution factors applied of 100X and 20X for the respective compounds.

PEST

The surrogate (%R) was high on one column only for decachlorobiphenyl (DCB) in sample JAX-47-937MW5S-112906. No action was taken for this noncompliance. The surrogate (%R) was high for 2,4,5,6-tetrachloro-m-xylene on both columns in sample JAX-47-937MW3S-112906. Positive results for affected compounds were qualified estimated (J) for this noncompliance.

All samples except JAX-47-MW15S-112906 had at least one dual column confirmation noncompliance associated with the sample. Samples JAX-47-937MW1S-112906, JAX-47-937MW3S-112906 and JAX-47-937MW5S-112906 were noncompliant for multiple compounds. The other samples had only one dual column noncompliant compound. Positive results with %Ds greater than the 25% QC limit were qualified estimated (J) for this noncompliance.

The positive result for gamma-BHC in sample JAX-47-937MW1S-112906 was not confirmed on both columns and was qualified nondetected estimated (UJ) for this noncompliance.

The reported result for 4,4'-DDD in sample JAX-47-937MW3S-112906 had a 10X dilution applied.

The results for beta-BHC and aldrin in sample JAX-47-937MW3S-112906 were beyond the linear calibration range and were qualified estimated (J) in this sample for this noncompliance.

The results for delta-BHC and aldrin in sample JAX-47-937MW5S-112906 were beyond the linear calibration range and were qualified estimated (J) in this sample for this noncompliance.

Additional Comments:

Positive results less than the method reporting limit (MRL) were qualified as estimated (J), due to uncertainty near the detection limit.

The lab reported to the method reporting limits (MRL) on sample form Is and reported down to method detection limits (MDL) in the database.

Matrix spike/matrix spike duplicate (MS/MSD) %Rs were high for 4-chloroaniline, 3-nitroaniline, 4-nitroaniline, N-nitrosodiphenylamine and carbazole. No action was taken because all results were nondetected.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Acetone was detected in the method blank and qualifications were made for positive results. Qualifications were made for a few initial calibration %RSD for VOCs. Several VOC and SVOC compounds had noncompliant continuing calibration %Ds and were qualified accordingly.

Other Factors Affecting Data Quality: Several LCS and MS/MSD %R noncompliances were noted affecting both VOCs and SVOCs. Multiple dual column %D noncompliances were noted for pesticide analysis.

TO: MARK PETERSON – PAGE 4
DATE: MARCH 7, 2007

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (10/99) and the Department of Defense (DoD) Quality Systems Manual (QSM) (January 2006). The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the DoD QSM and the Quality Assurance Project Plan (QAPP)."

SUPPORT DOCUMENTATION

CASE NARRATIVE

Tetra Tech NUS, Inc/NAS Jacksonville, CTO 047

Project Manger Mark Peterson

SDG BR006-009

Lab Sample ID	Client Sample ID
B610310-01	JAX-47-937MW1S-112906
B610310-02	JAX-47-937MW5S-112906
B610310-03	JAX-47-EB03
B610310-04	JAX-47-EB04
B610310-05	JAX-47-MW15D-112906
B610310-06	JAX-47-MW15S-112906
B610310-07	JAX47-937MW3S-112906
B610310-08	Trip Blank #3
B610310-09	Trip Blank #4

Volatiles

Method: The samples were analyzed by USEPA Method 8260B (VOA vial field sampling followed by purge and trap then capillary column GC/MS). Water samples were received into the laboratory in satisfactory condition.
Comments: The volatile analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- Trip Blank #3 and Trip Blank #4 were received for analysis but not noted on the chain of custody. Samples were analyzed per client request.
- The following samples reported positive results for acetone which is one of the materials referred to as "common laboratory solvents": JAX-47-937MW5S-112906, JAX-47-EB03, JAX-47-EB04, JAX47-937MW3S-112906 and Trip Blank #4. Their presence is suspected as being due to laboratory contamination. The associated method blank and matrix spike results for this component indicates that this contamination is of a sporadic and irregular nature, and may not be actually present in the samples. The Florida Department of Environmental Protection forbids the use of "blank subtraction" on such results, and requires that all positive data determined be reported as analyzed, with appropriate data qualifiers if necessary.
- JAX-47-EB03 and JAX-47-EB04 are equipment blanks which took positive results for toluene. Samples were re-analyzed outside method specified hold time with results confirming the original run. JAX-47-EB03 confirmation analysis resulted in 11.3ug/L for toluene and JAX-47-EB04 resulted in 11.5ug/L for toluene.
- Matrix Spike and Matrix Spike Duplicate failed DoD QSM specified control limits for dichlorodifluoromethane, chloromethane, bromomethane, isopropylbenzene, 1,2 dichlorobenzene, and 1,4-Dichlorobenzene. Samples were accepted based on the Laboratory Control Standard and based on passing %RPD values.
- The Laboratory Control Standard was outside the DoD QSM specified control limits. Upon re-analysis within a 24 hour period the Laboratory Control Standard passed the specified control limits for all compounds except chloromethane. The results of this compound should be considered estimated and bias high. Samples in the batch did not have any results for chloromethane so the data was accepted.
- Continuing Calibration Standard were outside established limits for several compounds however CCC and SPCC compounds passed.

Metals

Method: The samples were extracted by USEPA Method 3050b and analyzed by EPA Method 6010b. Water samples were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications.

Semi-volatiles

Method: The samples were extracted/analyzed by USEPA SW-846 Methods 3545/8270c. Water samples were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- Matrix Spike and Matrix Spike Duplicate were outside the established control limits. Data was accepted based on Laboratory Control Standard and %RPD recovery passing.
- Laboratory Control Standard was above the control limits for several compounds. Samples were clean for those compounds and data was accepted.
- Continuing Calibration Standard were outside established limits for several compounds however CCC and SPCC compounds passed.

Method: The samples were extracted/analyzed by USEPA SW-846 Methods 3545/8081a. Water samples were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- DBC surrogate recovery was outside the DoD QSM control limit for JAX-47-937MW5S-112906 due to matrix interference, however the recovery passed using Column B with a result of 120%.
- TCMX surrogate recovery was outside the established control limit on both columns due to sample matrix.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures.
