JAX-47-MW15S-112906	

Overview

The sample set for NAS Jacksonville, CTO 047, SDG BR006-009, consists of five aqueous environmental samples and two field quality control blanks.

All samples were analyzed for total arsenic and three samples were also analyzed for dissolved arsenic. The samples were collected by Tetra Tech NUS on November 29, 2006 and analyzed by Environmental Conservation Laboratories, Inc. Arsenic analyses were conducted using SW-846 method 6010B.

These data were evaluated based on the following parameters:

* • Data Completeness
* • Holding Times
* • Calibration Recoveries
• Laboratory Method/Preparation Blank Analyses
* • ICP Interference Check Sample Result
* • Matrix Spike/Matrix Spike Duplicate Recoveries
* • Laboratory Control Sample Recoveries
• Detection Limits
* • Analyte Quantitation

* - All quality control criteria were met for this parameter.

Notes

Originally, the laboratory did not report the linear calibration range of the inductively coupled plasma (ICP) atomic emission spectrometer (AES). After being contacted by the data reviewer, the laboratory provided the linear calibration range of the instrument.

The non-detected arsenic result for sample JAX-47-MW15D-112906 was not reported down to both the method detection limit (MDL) and the method reporting limit (MRL) on Form I report as requested in the laboratory scope-of-work and required by the state of Florida. The non-detected result was reported down to the MRL on Form I report. The laboratory correctly reported the non-detected arsenic result down to the MDL in the electronic data deliverable (EDD).

The arsenic result on the laboratory method blank form was not reported down to the MDL.

The laboratory only reported to one significant figure for all non-detected results.

Executive Summary

Laboratory Performance: None.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Data Review", July 2002, and the Department of Defense (DoD) document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (January 2006).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the DoD QSM and the Quality Assurance Project Plan (QAPP)."

2. Appendix B - Results as reported by the Laboratory
3. Appendix C – Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

CASE NARRATIVE

Tetra Tech NUS, Inc/NAS Jacksonville, CTO 047

Project Manger Mark Peterson

SDG BR006-009

Lab Sample ID	Client Sample ID
B610310-01	JAX-47-937MW1S-112906
B610310-02	JAX-47-937MW5S-112906
B610310-03	JAX-47-EB03
B610310-04	JAX-47-EB04
B610310-05	JAX-47-MW15D-112906
B610310-06	JAX-47-MW15S-112906
B610310-07	JAX47-937MW3S-112906
B610310-08	Trip Blank #3
B610310-09	Trip Blank #4

Volatiles

Method: The samples were analyzed by USEPA Method 8260B (VOA vial field sampling followed by purge and trap then capillary column GC/MS). Water samples were received into the laboratory in satisfactory condition.
Comments: The volatile analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- Trip Blank #3 and Trip Blank #4 were received for analysis but not noted on the chain of custody. Samples were analyzed per client request.
- The following samples reported positive results for acetone which is one of the materials referred to as "common laboratory solvents": JAX-47-937MW5S-112906, JAX-47-EB03, JAX-47-EB04, JAX47-937MW3S-112906 and Trip Blank #4. Their presence is suspected as being due to laboratory contamination. The associated method blank and matrix spike results for this component indicates that this contamination is of a sporadic and irregular nature, and may not be actually present in the samples. The Florida Department of Environmental Protection forbids the use of "blank subtraction" on such results, and requires that all positive data determined be reported as analyzed, with appropriate data qualifiers if necessary.
- JAX-47-EB03 and JAX-47-EB04 are equipment blanks which took positive results for toluene. Samples were re-analyzed outside method specified hold time with results confirming the original run. JAX-47-EB03 confirmation analysis resulted in 11.3ug/L for toluene and JAX-47-EB04 resulted in 11.5ug/L for toluene.
- Matrix Spike and Matrix Spike Duplicate failed DoD QSM specified control limits for dichlorodifluoromethane, chloromethane, bromomethane, isopropylbenzene, 1,2 dichlorobenzene, and 1,4-Dichlorobenzene. Samples were accepted based on the Laboratory Control Standard and based on passing %RPD values.
- The Laboratory Control Standard was outside the DoD QSM specified control limits. Upon re-analysis within a 24 hour period the Laboratory Control Standard passed the specified control limits for all compounds except chloromethane. The results of this compound should be considered estimated and bias high. Samples in the batch did not have any results for chloromethane so the data was accepted.
- Continuing Calibration Standard were outside established limits for several compounds however CCC and SPCC compounds passed.

Metals

Method: The samples were extracted by USEPA Method 3050b and analyzed by EPA Method 6010b. Water samples were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications.

Semi-volatiles

Method: The samples were extracted/analyzed by USEPA SW-846 Methods 3545/8270c. Water samples were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- Matrix Spike and Matrix Spike Duplicate were outside the established control limits. Data was accepted based on Laboratory Control Standard and %RPD recovery passing.
- Laboratory Control Standard was above the control limits for several compounds. Samples were clean for those compounds and data was accepted.
- Continuing Calibration Standard were outside established limits for several compounds however CCC and SPCC compounds passed.

Method: The samples were extracted/analyzed by USEPA SW-846 Methods 3545/8081a. Water samples were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- DBC surrogate recovery was outside the DoD QSM control limit for JAX-47-937MW5S-112906 due to matrix interference, however the recovery passed using Column B with a result of 120%.
- TCMX surrogate recovery was outside the established control limit on both columns due to sample matrix.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures.

Subject: RE: Metals Limits (2).xls

Matt,

Correct, the arsenic is a one-point calibration with the 1 ppm. However, the Low Level Quality Control Standard, (QCS-low) is the amount of analyte in the solution equal to the MQL (Minimum Quantitative Limit) of that analyte with the acceptance criteria of +/- 20% and it is not part of the curve. The QCS –low is a standard to verify that the instrument is responding down to the reporting limit. This is a requirement by NELAC/DoD when using a one-point calibration.

The Linear Dynamic Range (LDR) is the concentration range over which the instrument response to an analyte linearity with the acceptance criteria of +/- 10%. This is also a NELAC/DoD requirement with a one-point curve and must be performed every six months.

The "E" qualifier is estimated concentration because the concentration was about the one-point calibration; however, the "E" should have not been reported if the concentration is below the LDR or above the QCS. Element's programmers are addressing this problem

Thanks,

Chris Tompkins

Subject: RE: Metals Limits (2).xls

Chris,

Arsenic is 1ppm in the curve column, 100ppm in the LDR column, and 0.010ppm in the QCS low column. I believe this means that the one point calibration was run off of a 1ppm arsenic standard and that the low point of the curve is 0.010ppm and the high point is 100ppm, correct?

What do the acrynomns LDR and QCS stand for?

What does your "E" qualifier mean for metals? I did not find it in the definitions section of the Sample Summary/Laboratory Chronicle for SDG: BR006-009.

Thanks,

Matt

Matt,
Here is the form that we just talked about. Please let me know if you have any other questions.

Thanks,

Chris Tompkins

1/Aqueous/PEST
JAX47-R01-113007

OVERVIEW

The sample set for NAS Jacksonville CTO 047, SDG BR006-010 consists of one (1) trip blank, and thirteen (13) environmental water samples. One field duplicate pair was included in this SDG: JAX-DU01-120106/JAX47-MW13S-120106. All samples were analyzed for volatile organic compounds (VOC), semivolatile organic compounds (SVOC), and pesticide compounds (PEST). The trip blank was analyzed for VOCs only.

The samples were collected by TetraTech NUS on November 30 and December 1, 2006 and analyzed by Environmental Conservation Laboratory (ENCO). All analyses were conducted in accordance with SW-846 Methods 8260B, 8270C, and 8081A analysis and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters:

*	• Data completeness
*	• Holding times
*	• GC/MS Tuning
	• Initial and continuing calibration
	• Blank results
	• Surrogate spike recoveries
*	• Internal standard recoveries
	• Blank Spike/Blank Spike Duplicate Results
*	• Matrix Spike/Matrix Spike Duplicate Results
	• Field Duplicate Precision
*	• Detection Limits
*	• Compound Quantitation
*	• Compound Identification

The symbol (*) indicates that quality control criteria were met for this parameter. Problems affecting data quality are discussed below; documentation supporting these findings is presented in Appendix C. Qualified Analytical results are presented in Appendix A. Results as reported by the laboratory are presented in Appendix B.

Volatiles

The following compounds were detected in the method blanks at the following maximum concentrations:

Compound	Maximum Concentration	Action Level
Acetone	2.2 ug/L	22 ug/L
1,2,4-trichlorobenzene	0.26 ug/L	1.3 ug/L

Blank Actions

- Value < Reporting Limit (RL); report RL followed by a U.
- Value > RL and < Action level; report value followed by a U.
- Value > RL and > action level; report value unqualified.

Action levels of 10X the maximum contaminant concentration (for acetone) were established to evaluate blank contamination. Action levels of 5X the maximum contaminant concentration (for 1,2,4-trichlorobenzene) were established to evaluate blank contamination. Dilution factors and sample aliquots were taken into consideration during the application of all action levels. Positive results for 1,2,4-trichlorobenzene were qualified as indicated above. No positive results were reported for acetone in the environmental samples. Acetone was also detected in the trip blank. However, the trip blank was not qualified for method blank contamination.

The initial calibration relative response factor (RRF) was less than the 0.05 quality control limit for 4-methyl-2-pentanone on instrument JVGCMS1 on 11/30/06. The continuing calibration RRF (12/15/06 at 9:39) was also less than 0.05. The nondetected result reported for this compound in all samples were rejected, qualified (UR).

Initial calibration percent relative standard deviations (%RSDs) were greater than the 30% quality control limit for bromomethane, methylcyclohexane, and bromoform on instrument JVGCMS1 on 12/0706. The positive and nondetected results reported for these compounds were qualified as estimated (J) and (UJ), respectively. All samples in the SDG are affected.

The continuing calibration percent difference (%D) for bromomethane was greater than the 25% quality control limit on instrument JVGCMS1 on 12/7/06 at 0:14. The nondetected results reported for this compound were qualified as estimated (UJ) in all samples except the dilution analysis of sample JAX47-937MW2S-113006.

The continuing calibration %D for dichlorodifluoromethane, bromomethane, acetone, carbon disulfide, and tetrachloroethane was greater than the 25% quality control limit on instrument JVGCMS1 on 12/15/06 at 9:39. No actions were necessary as the only sample affected was the dilution analysis of JAX47-937MW2S-113006 and only cis-1,2-dichloroethene was reported from this analysis.

The Laboratory Control Samples (LCS) 6L07013 had percent recoveries (%Rs) for dichlorodifluoromethane and chloromethane that was higher than the respective quality control limit. No action was necessary as no positive results were reported for these compounds in the affected samples and nondetects are not impacted by high %Rs.

According to the lab case narrative the matrix spike/matrix spike duplicate (MS/MSD)was performed on an alternate sample because of insufficient sample volume.

Sample JAX47-937MW6D-113006 was submitted but was not logged on the chain of custody. The project manager authorized analysis.

Sample JAX47-937MW2S-113006 was reanalyzed at a 5-fold dilution because the concentration of cis-1,2-dichloroethene was in excess of the linear calibration range of the instrument. Only the result for cis-1,2-dichloroethene was reported from the 5-fold dilution analysis. The dilution analysis was performed outside the maximum allowable holding time hence the cis-1,2-dichloroethene result was qualified as estimated (J).

Poor field duplicate precision was noted for 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, benzene, and chlorobenzene in the sample pair JAX47-DU01-120106/JAX47-MS13S-120106. the relative

precent differences (RPDs) for these compounds were greater than the 30% quality control limit. Positive results for these compounds in the field duplicate pair were qualified as estimated (J).

SVOCs

Initial calibration %RSDs were greater than the 30% quality control limit for hexachlorocyclopentadiene, 2,4-dinitrophenol, N-nitrosodiphenylamine, and pentachlorophenol on instrument JSVGCMS1 on 11/01/06. The nondetected results reported for these compounds were qualified as estimated (UJ). All samples in the SDG are affected.

The continuing calibration %D for 4-chloroaniline, 2,4-dinitrophenol, 4-nitroaniline, 2-methyl-4,6-dinitrophenol, and carbazole were greater than the 25% quality control limit on instrument JSVGCMS1 on 12/8/06 at 12:27. The nondetected results reported for these compounds were qualified as estimated (UJ) in all samples.

The continuing calibration %D for 4-chloroaniline, 2-nitroaniline, 3-nitroaniline, and carbazole were greater than the 25% quality control limit on instrument JSVGCMS1 on 12/8/06 at 14:37. The nondetected results reported for these compounds were qualified as estimated (UJ) in all samples.

The LCS 6L07001 had %Rs for 4-chloroaniline, 3-nitroaniline, N-nitrosodiphenylamine, and carbazole that were higher than the respective quality control limits. No actions were necessary as no positive results were reported for these compounds in the affected samples and nondetects are not impacted by high %Rs.

The surrogate %R for 2-fluorobiphenyl was high in sample JAX47-MW13D-1200106. No actions were warranted as only one fractional surrogate was noncompliant.

The internal standard area for perylene-d12 was high in sample JAX47-13S-120106. All compounds quantiated using the failed internal standard were qualified as estimated. Only nondetects were reported and these were qualified (UJ).

Sample JAX47-937MW2S-113006 was reanalyzed at a 10-fold dilution because the concentration of 2,4,5-trichlorophenol was in excess of the linear calibration range of the instrument. Only the result for 2,4,5-trichlorophenol was reported from the 10-fold dilution analysis.

Pest

The initial calibration performed on 12/1/06 at instrument JSVGCECD2 yielded %RSDs that exceeded the 20% quality control criterion for delta-BHC on column 1 and 4,4'-DDT on column2. Since the noncompliances only occur on one column only positive results are affected and the positive delta-BHC results in samples JAX47-937MW2S-113006 and JAX47-MW27S-113006 were qualified as estimated (J).

The continuing calibration performed on 12/8/06 at 11:13 on instrument JSVGCECD2 yielded %Ds that exceeded the 15% quality control criterion for gamma-chlordane and endrin on both columns and aldrin, heptachlor epoxide, gamma-chlordane, 4,4-DDE, endosulfan I, dieldrin, 4,4'-DDD, endosulfan II, and endrin ketone on column 2. The positive and nondetected results reported for gamma-chlordane and endrin in samples JAX47-937MW2S-113006, JAX47-MW6D-113006, JAX47-937MW10S-113006, JAX47-MW18D-113006, and JAX47-MW18S-113006 were qualified as estimated (J) and (UJ), respectively.

The continuing calibration performed on 1/5/06 at 17:58 on instrument JSVGCECD2 yielded a %D that exceeded the 15% quality control criterion for delta-BHC on both column 1. No actions were warranted as no environmental samples were impacted by this noncompliance.

The surrogate %R for decachlorobiphenyl on column 1 was high in sample JAX47-937MW2S-113006. Positive results reported from column I in this sample were qualified as estimated (J). Nondetects are no impacted by this noncompliance.

The laboratory control sample 6L07002 yielded a low %R for endrin ketone on column 2. No action was warranted as the recovery was noncompliant on one column only.

Positive pesticide results were qualified as estimated (J) as a result of high percent differences (>100%) between analytical columns in the following:

Analyte	%D
JAX47-937MW2S-113006	
gamma-BHC	1757
beta-BHC	378.4
Aldrin	1321.1
Endosulfan sulfate	593.3
Endrin ketone	944.5
JAX47-MW20S-113006	
Heptachlor epoxide	100
JAX47-MW27S-113006	
Alpha-chlordane	500
4,4'-DDD	1600
JAX47-R01-113006	
Dieldrin	1300
JAX47-DU01-120106	
Endrin	320
Endosulfan II	114.3
Endrin Ketone	750
JAX47-MW13S-120106	
4,4'-DDE	425
Endrin	316.7
Endosulfan II	125
Methoxychlor	309.1
Endrin ketone	211.8

Positive pesticide results were qualified as estimated (J) as a result of percent differences (>25% but less than 100%) between analytical columns in the following:

Analyte	%D
JAX47-937MW2S-113006	
Alpha-Chlordane	39.1
4,4'-DDE	94.1
4,4'-DDD	80.3
JAX47-MW20S-113006	
Endosulfan II	33.3
JAX47-MW27S-113006	
Dieldrin	33.3
Endrin ketone	50
JAX47-DU01-120106	
Aldrin	40
Heptachlor epoxide	25.9
JAX47-MW13S-120106	
Heptachlor	33.3
Aldrin	45.5
Heptachlor epoxide	46.4
alpha-Chlordane	36.8

Poor field duplicate precision was noted for alpha-chlordane, endrin aldehyde, and endrin ketone in the sample pair JAX47-DU01-120106/JAX47-MS13S-120106. the relative precent differences (RPDs) for these compounds were greater than the 30% quality control limit. Positive results for these compounds in the field duplicate pair were qualified as estimated (J).

The laboratory reported the higher of the results from the 2 analytical columns but the Form Is don't always agree with the database. Results summarized in the database were used for validation.

Additional Comments:

Positive results less than the reporting limit (RL) were qualified as estimated (J), due to uncertainty near the detection limit.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Acetone and 1,2,4-trichlorobenzene were detected in method blanks. Several VOC, SVOC, and PEST compounds had noncompliant calibration %RSDs and %Ds. SVOC and PEST surrogate noncompliances were noted. VOC, SVOC, and PEST LCS noncompliances were noted. Positive pesticide results were estimated due to high %Ds between analytical columns.

Other Factors Affecting Data Quality: A few VOC, SVOC, and PEST samples required dilution.

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (10/99). The text of this report has been formulated to address only those problem areas affecting data quality.

B610359-13	Trip Blank #2

Semi-volatile

Method: The samples were extracted and analyzed by USEPA SW-846 Methods 3545/8270c. Water samples were received into the laboratory in satisfactory condition.

Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- Due to insufficient sample, the Matrix Spike and Matrix Spike Duplicate was performed on an alternative sample not related to this project.
- The analysis of the Laboratory Control Standard, Matrix Spike and Matrix Spike Duplicate had positive results that exceeded the DoD QSM established control limits. The corresponding samples did not show positive results for those compounds, therefore the data was accepted.
- The surrogate 2-Fluorobiphenyl for sample ID JAX-MW13D-120106 was outside of the DoD QSM established control limits. The remaining surrogates were within the established control limits.
- Several compounds did not meet the specified control limits for the Continuing Calibration Check Standard. Data was accepted on criteria that all CCC and SPCC compounds passed.

Method: The samples were extracted/analyze by USEPA SW-846 Methods 3545/8081A. Waters were received into the laboratory in satisfactory condition.

Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- Due to insufficient sample, Matrix Spike and Matrix Spike Duplicate was performed on an alternative sample not related to this project.
- Laboratory Control Standard for Endrin Ketone on the secondary column was outside the DoD QSM established control limits however it is within the marginal exceedance limit.
- Matrix Spike was outside the DoD QSM established limits for Endrin Ketone but was in the marginal exceedance limit.
- JAX47-937MW2S-113 for the surrogate DBC was outside the DoD QSM established control limits due to sample matrix.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures.

Volatiles

Method: The samples were analyzed by USEPA Method 8260B (VOA vial field sampling followed by purge and trap then capillary column GC/MS). Water samples were received into the laboratory in satisfactory condition.

Comments: The volatile analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- Due to insufficient sample, one of the Matrix Spike and Matrix Spike Duplicate was performed on an alternative sample not related to this project.
- JAX47-937MW6D-113006 was submitted for analysis but was not on the chain of custody. The sample was analyzed per client request.
- JAX47-937MW2S-113006 was analyzed within the method specified hold time. Cis-1,2 dichloroethene had a result that was above the high point of the calibration curve. The compound was re-analyzed at dilution, however was outside of the method specified hold time.
- The Matrix Spike and Matrix Spike Duplicate had several compounds that were outside the DoD QSM control limits. Data was accepted based on an acceptable Laboratory Control Standard and precision data.
- The Laboratory Control Standard for dichlorodifluoromethane and chloromethane exceeded the DoD QSM upper control limits. Results for these compounds should be considered bias high. Samples associated with this laboratory control standard did not have positive results for these compounds.
- Several compounds did not meet the specified control limits for the Continuing Calibration Check Standard. Data was accepted on criteria that all CCC and SPCC compounds passed.

Metals

Method: The samples were extracted by USEPA Method 3050B and analyzed by EPA Method 6010B. Water samples were received into the laboratory in satisfactory condition.

Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications.

Overview

The sample set for NAS Jacksonville, CTO 047, SDG BR006-010, consists of twelve aqueous environmental samples. One field duplicate pair (JAX47-DU01-120106 / JAX47-MW13S-120106) is included in this SDG.

All samples were analyzed for total arsenic and two samples were also analyzed for dissolved arsenic. The samples were collected by Tetra Tech NUS on November 30 - December 1, 2006 and analyzed by Environmental Conservation Laboratories, Inc. Arsenic analyses were conducted using SW-846 method 6010B.

These data were evaluated based on the following parameters:

* • Data Completeness
* • Holding Times
* • Calibration Recoveries
* • Laboratory Method/Preparation Blank Analyses
* • ICP Interference Check Sample Result
* • Matrix Spike/Matrix Spike Duplicate Recoveries
* • Laboratory Control Sample Recoveries
* • Field Duplicate Precison
• Detection Limits
* • Analyte Quantitation

* - All quality control criteria were met for this parameter.

Notes

Originally, the laboratory did not report the linear calibration range of the inductively coupled plasma (ICP) atomic emission spectrometer (AES). After being contacted by the data reviewer, the laboratory provided the linear calibration range of the instrument.

The non-detected arsenic results were not reported down to both the method detection limit (MDL) and method reporting limit (MRL) on Form I reports as requested in the laboratory scope-of-work and required by the state of Florida. The non-detected results were reported down to the MRL on the Form I reports. The laboratory correctly reported the non-detected arsenic results down to the MDL in the electronic data deliverable (EDD).

The laboratory used "937" in the identification of sample JAX47-MW10S-113006. The chain-of-custody record did not include this designation so it was removed from the sample Form I reports and the database.

The arsenic result on the laboratory method blank form was not reported down to the MDL.

The laboratory only reported to one significant figure for all non-detected results.

Executive Summary

Laboratory Performance: The laboratory incorrectly reported detection limits on several forms.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Data Review", July 2002, and the Department of Defense (DoD) document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (January 2006).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the DoD QSM and the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C – Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

TETRA TECH NUS, INC

CHAIN OF CUSTODY
NUMBER: 112G00497-1212006-2

Project No: 112G00497	Facility: JACKSONVILLE NAS	Project Manager: Mark Peterson	Carrier: Hand Deliver	Laboratory Name: Environmental Conservation Laboratories 4810 Executive Park Court, Suite 211 Jacksonville, FL 32216
Task No: CTO 0047	Turn Around Time: Standard	Field Ops Leader: Charles Metz	Carrier/Waybill No.	Point of Contact: Lab Contact 904-296-3007

Volatiles

Method: The samples were analyzed by USEPA Method 8260B (VOA vial field sampling followed by purge and trap then capillary column GC/MS). Water samples were received into the laboratory in satisfactory condition.

Comments: The volatile analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- Due to insufficient sample, one of the Matrix Spike and Matrix Spike Duplicate was performed on an alternative sample not related to this project.
- JAX47-937MW6D-113006 was submitted for analysis but was not on the chain of custody. The sample was analyzed per client request.
- JAX47-937MW2S-113006 was analyzed within the method specified hold time. Cis-1,2 dichloroethene had a result that was above the high point of the calibration curve. The compound was re-analyzed at dilution, however was outside of the method specified hold time.
- The Matrix Spike and Matrix Spike Duplicate had several compounds that were outside the DoD QSM control limits. Data was accepted based on an acceptable Laboratory Control Standard and precision data.
- The Laboratory Control Standard for dichlorodifluoromethane and chloromethane exceeded the DoD QSM upper control limits. Results for these compounds should be considered bias high. Samples associated with this laboratory control standard did not have positive results for these compounds.
- Several compounds did not meet the specified control limits for the Continuing Calibration Check Standard. Data was accepted on criteria that all CCC and SPCC compounds passed.

Metals

Method: The samples were extracted by USEPA Method 3050B and analyzed by EPA Method 6010B. Water samples were received into the laboratory in satisfactory condition.

Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications.

Semi-volatile

Method: The samples were extracted and analyzed by USEPA SW-846 Methods 3545/8270c. Water samples were received into the laboratory in satisfactory condition.

Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- Due to insufficient sample, the Matrix Spike and Matrix Spike Duplicate was performed on an alternative sample not related to this project.
- The analysis of the Laboratory Control Standard, Matrix Spike and Matrix Spike Duplicate had positive results that exceeded the DoD QSM established control limits. The corresponding samples did not show positive results for those compounds, therefore the data was accepted.
- The surrogate 2-Fluorobiphenyl for sample ID JAX-MW13D-120106 was outside of the DoD QSM established control limits. The remaining surrogates were within the established control limits.
- Several compounds did not meet the specified control limits for the Continuing Calibration Check Standard. Data was accepted on criteria that all CCC and SPCC compounds passed.

Method: The samples were extracted/analyze by USEPA SW-846 Methods 3545/8081A. Waters were received into the laboratory in satisfactory condition.

Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- Due to insufficient sample, Matrix Spike and Matrix Spike Duplicate was performed on an alternative sample not related to this project.
- Laboratory Control Standard for Endrin Ketone on the secondary column was outside the DoD QSM established control limits however it is within the marginal exceedance limit.
- Matrix Spike was outside the DoD QSM established limits for Endrin Ketone but was in the marginal exceedance limit.
- JAX47-937MW2S-113 for the surrogate DBC was outside the DoD QSM established control limits due to sample matrix.

Subject: RE: Metals Limits (2).xls

Matt,

Correct, the arsenic is a one-point calibration with the 1 ppm. However, the Low Level Quality Control Standard, (QCS-low) is the amount of analyte in the solution equal to the MQL (Minimum Quantitative Limit) of that analyte with the acceptance criteria of +/- 20% and it is not part of the curve. The QCS –low is a standard to verify that the instrument is responding down to the reporting limit. This is a requirement by NELAC/DoD when using a one-point calibration.

The Linear Dynamic Range (LDR) is the concentration range over which the instrument response to an analyte linearity with the acceptance criteria of +/- 10%. This is also a NELAC/DoD requirement with a one-point curve and must be performed every six months.

The "E" qualifier is estimated concentration because the concentration was about the one-point calibration; however, the "E" should have not been reported if the concentration is below the LDR or above the QCS. Element's programmers are addressing this problem

Thanks,

Chris Tompkins

Subject: RE: Metals Limits (2).xls

Chris,

Arsenic is 1ppm in the curve column, 100ppm in the LDR column, and 0.010ppm in the QCS low column. I believe this means that the one point calibration was run off of a 1ppm arsenic standard and that the low point of the curve is 0.010ppm and the high point is 100ppm, correct?

What do the acrynomns LDR and QCS stand for?

What does your "E" qualifier mean for metals? I did not find it in the definitions section of the Sample Summary/Laboratory Chronicle for SDG: BR006-009.

Thanks,

Matt

Matt,
Here is the form that we just talked about. Please let me know if you have any other questions.

Thanks,

Chris Tompkins

SUBJECT: **ORGANIC DATA VALIDATION- PEST**
CTO 047, NAS JACKSONVILLE
SDG BR006-011

SAMPLES: 4/SPLP

JAX47-SB100-01-113006 JAX47-SB105-01-113006
JAX47-SB106-01-113006 JAX47-SB107-01-113006

OVERVIEW

The sample set for CTO 047, NAS Jacksonville, SDG BR006-011 consists of four (4) environmental soil SPLP leachate samples. All above listed samples were analyzed as indicated above.

The samples were collected by TetraTech NUS on November 30, 2006 and analyzed by Environmental Conservation Laboratories, Inc. All analyses were conducted in accordance with Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria using SW-846 Method 8081 analytical and reporting protocols. The data contained in this SDG were validated with regard to the following parameters:

*	• Data completeness
*	• Holding times
*	• Initial and continuing calibration
*	• Blank results
*	• Surrogate spike recoveries
	• Blank Spike/Blank Spike Duplicate Results
*	• Matrix Spike/Matrix Spike Duplicate Results
*	• Detection Limits
*	• Compound Quantitation
*	• Compound Identification

The symbol (*) indicates that all quality control criteria were met for this parameter. Problems affecting data quality are discussed below; documentation supporting these findings is presented in Appendix C. Qualified Analytical results are presented in Appendix A. Results as reported by the laboratory are presented in Appendix B.

Pesticides

The laboratory reported down to Reporting Limits (RL) on all Form Is for all compounds instead of to Method Detection Limits (MDLs). However, MDLs were included in the database for all compounds and these limits were used for validation.

The dual column confirmation %D was greater than the 25% QC limit for at least one compound analyzed in all samples. The affected results were qualified as estimated (J) for this noncompliance.

Endosulfan II was reported as positive in sample JAX47-SB105-01-113006, but was not confirmed on the second column. The result was changed to nondetect and was estimated (UJ).

TO: **MARK PETERSON – PAGE 2**
DATE: **MARCH 6, 2007**

EXECUTIVE SUMMARY

Laboratory Performance Issues: Several dual column confirmation noncompliances were noted. MDL versus RL issues on Form Is.
Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (10/99) and Department of Defense document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (January 2006). The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the DoD QSM for guidelines and the Quality Assurance Project Plan (QAPP)."

Metals

Method: The samples were extracted by USEPA Method 1312/3050B and analyzed by EPA Method 6010B. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications.

Semi-volatiles

Method: The samples were extracted/analyze by USEPA SW-846 Methods 1312/3545/8081A. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures.

OVERVIEW

The sample set for CTO 047, NAS Jacksonville, SDG BR006-011 consists of eight (8) environmental soil samples. All above aqueous samples were analyzed as indicated above.

The samples were collected by TetraTech NUS on November 30, 2006 and analyzed by Environmental Conservation Laboratories, Inc. All analyses were conducted in accordance with Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria using SW-846 Method 8081A analytical and reporting protocols. The data contained in this SDG were validated with regard to the following parameters:

*	• Data completeness
*	• Holding times
*	• Initial and continuing calibration
*	• Blank results
*	• Surrogate spike recoveries
	• Blank Spike/Blank Spike Duplicate Results
	• Matrix Spike/Matrix Spike Duplicate Results
*	• Detection Limits
	• Compound Quantitation
*	• Compound Identification

The symbol (*) indicates that all quality control criteria were met for this parameter. Problems affecting data quality are discussed below; documentation supporting these findings is presented in Appendix C. Qualified Analytical results are presented in Appendix A. Results as reported by the laboratory are presented in Appendix B.

Pesticides

The laboratory reported down to Reporting Limits (RL) on all Form Is for all compounds instead of to Method Detection Limits (MDLs). However, MDLs were included in the database for all compounds and these limits were used for validation.

The following compound was detected in the method blank on 12/15/06 at 19:00 on column 1 and column 2 at the following maximum concentration:

Compound	Maximum Concentration	Action Level
4,4'DDT	0.167 ug/kg	0.835 ug/kg

An action level of 5X the maximum contaminant concentration was established to evaluate blank contamination for this compound. Dilution factors, % solids and sample aliquot were taken into consideration in the establishment of the blank action level. No action was taken because all DDT results exceeded the blank action level.

The dual column confirmation %D was greater than the 25% QC limit for at least one compound analyzed on 6 out of the 8 samples. The affected results were qualified as estimated (J) for this noncompliance. Compounds not confirmed, but reported by the laboratory were qualified as estimated (UJ).

The continuing calibration performed on 12/15/06 at 18:34 on instrument JSVGCECD2 yielded a %D that exceeded the 15% quality control criterion for heptachlor on column 1 and column 2. The positive result in samples JAX47-SB105-01-113006 and JAX47-SB106-01-113006 was qualified estimated (J) for this noncompliance. Nondetects in associated samples were qualified estimated (UJ).

The continuing calibration performed on 12/15/06 at 23:19 on instrument JSVGCECD2 yielded a %D that exceeded the 15% quality control criterion for alpha chlordane, endosulfan sulfate, methoxychlor, and endrin aldehyde and on column 1 and column 2. The positive result for methoxychlor in sample JAX47-SB107-01-113006 was qualified estimated (J) for this noncompliance. Nondetects for endrin aldehyde, alpha chlordane, and endosulfan sulfate in associated samples were qualified estimated (UJ).

The continuing calibration performed on 12/16/06 at 01:28 on instrument JSVGCECD2 yielded a %D that exceeded the 15% quality control criterion for methoxychlor, 4,4'-DDD and 4,4'-DDT on column 1 and column 2. Positive and nondetect results for methoxychlor and 4,4'-DDD qualified estimated (J)/(UJ).

The continuing calibration performed on 12/21/06 at 21:20 on instrument JSVGCECD2 yielded a %D that exceeded the 15% quality control criterion for 4,4'-DDD and 4,4'-DDT on column 1 and column 2. The positive result for 4,4'-DDD was qualified estimated (J) in sample JAX47-SB105-01-113006 for this noncompliance. 4,4'-DDT was not reported in samples associated with this calibration.

The continuing calibration performed on 12/21/06 at 23:29 on instrument JSVGCECD2 yielded a %D that exceeded the 15% quality control criterion for 4,4'-DDT on column 1 and column 2. No action was taken for this noncompliance because no positive results were reported for 4,4'-DDT in the associated samples.

The surrogate recovery (%R) for decachlorobiphenyl (DCB) was high for samples JAX47-SB107-01-113006 and JAX47-SB106-01-113006 and low for sample JAX47-SB100-01-113006. No action was taken for this noncompliance because only one surrogate was out of specification.

The MS/MSD %Rs for sample JAX47-SB100-01-113006 were poor for 4,4'-DDE, 4,4'-DDD and 4,4'-DDT, but no action was taken because sample concentrations exceeded the spike concentration but a factor of at least 5X. Numerous other MS/MSD noncompliances on both columns were noted. All RPDs are outside of QC limits. All positive results and nondetects were estimated (J)/(UJ) for this noncompliance except 4,4'-DDE, 4,4'-DDD and 4,4'-DDT.

DATE: MARCH 6, 2007

EXECUTIVE SUMMARY

Laboratory Performance Issues: Several calibration noncompliances were noted. Several dual column confirmation noncompliances were noted. One surrogate failed criteria in three samples. The lab did not summarize MDLs on Form Is.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (10/99) and Department of Defense document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (January 2006). The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the DoD QSM for guidelines and the Quality Assurance Project Plan (QAPP)."

APPENDIX C

SUPPORT DOCUMENTATION

Metals

Method: The samples were extracted by USEPA Method 3050B and analyzed by EPA Method 6010B. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications.

Semi-volatiles

Method: The samples were extracted/analyze by USEPA SW-846 Methods 3545/8081A. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- DBC surrogate recoveries for JAX47-SB100-01-113006, JAX47-SB106-01-113006, JAX47-SB107-01-113006 were outside the DoD QSM control limits due to sample matrix.
- Continuing Calibration Verification Standard 9LJA014 result for 4,4-DDT and Methoxychlor were outside and below the DoD QSM. None of the samples had any reportable data associated with this standard, however the laboratory control standard, matrix spike, matrix spike duplicate and associate batch blank were reported using this continuing calibration verification standard. All the quality control was within the DoD QSM control limits and the batch blank ran after a passing calibration verification standard.
- The Matrix Spike and Matrix Spike Duplicate were outside the DoD QSM control limits due to the sample matrix.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures.

Overview

The sample set for NAS Jacksonville, CTO 047, SDG BR006-011, consists of four (4) leachate and eight (8) soil environmental samples. No field duplicate pairs were included in this SDG.

All samples were analyzed for arsenic. The samples were collected by Tetra Tech NUS, Inc. on November 30, 2006 and analyzed by Environmental Conservation Laboratories, Inc. Arsenic analyses were conducted using EPA methods 1312/3050B and 6010B methodologies.

These data were evaluated based on the following parameters:

* • Data Completeness
* • Holding Times
* • Calibration Recoveries
* • Laboratory Method/Preparation Blank Analyses
* • ICP Interference Check Sample Results
* • Matrix Spike / Matrix Spike Duplicate Recoveries
* • Laboratory Control Sample Recoveries
* • Detection Limits
* • Analyte Quantitation

* - All quality control criteria were met for this parameter.

Notes

None.

Executive Summary

Laboratory Performance: None.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Data Review", October 2004.

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Results
2. *Appendix B - Results as reported by the Laboratory*
3. Appendix C - Support Documentation

Appendix A
Qualified Analytical Results

Data Validation Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

Support Documentation

Metals

Method: The samples were extracted by USEPA Method 1312/3050B and analyzed by EPA Method 6010B. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications.

Semi-volatiles

Method: The samples were extracted/analyze by USEPA SW-846 Methods 1312/3545/8081A. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures.

Metals

Method: The samples were extracted by USEPA Method 3050B and analyzed by EPA Method 6010B. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications.

Semi-volatiles

Method: The samples were extracted/analyze by USEPA SW-846 Methods 3545/8081A. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- DBC surrogate recoveries for JAX47-SB100-01-113006, JAX47-SB106-01-113006, JAX47-SB107-01-113006 were outside the DoD QSM control limits due to sample matrix.
- Continuing Calibration Verification Standard 9LJA014 result for 4,4-DDT and Methoxychlor were outside and below the DoD QSM. None of the samples had any reportable data associated with this standard, however the laboratory control standard, matrix spike, matrix spike duplicate and associate batch blank were reported using this continuing calibration verification standard. All the quality control was within the DoD QSM control limits and the batch blank ran after a passing calibration verification standard.
- The Matrix Spike and Matrix Spike Duplicate were outside the DoD QSM control limits due to the sample matrix.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures.

OVERVIEW

The sample set for CTO 047 NAS Jacksonville, SDG BR006-013 consists of twenty (20) solid environmental samples and eight (8) Synthetic Precipitation Leaching Procedure (SPLP) samples. Two field duplicates were included in this SDG: JAX47-SB091-04-120106 / JAX47-DU02-120106 and JAX47-SB090-03-120106 / JAX47-DU03-120106. The results for samples JAX47-SB091-04-120106 and JAX47-SB090-03-120106 are contained in SDG BR006-013. The samples were analyzed for pesticides (PEST) organic compounds.

The samples were collected by TetraTech NUS on December 1, 2006 and analyzed by Environmental Conservation Laboratories, Inc. SPLP extractions and all analyses were conducted in accordance with SW-846 Methods 1312 and 8081A analysis and reporting protocols. The data contained in this SDG were validated with regard to the following parameters:

* • Data completeness
* • Holding times
• Initial/continuing calibrations
• Laboratory method blank results
• Surrogate Recoveries
• Blank Spike/Blank Spike Duplicate Results
• Matrix Spike/Matrix Spike Duplicate Results
• Field Duplicate Results

* • Compound Quantitation
• Compound Identification
* • Detection Limits

The symbol (*) indicates that quality control criteria were met for this parameter. Problems affecting data quality are discussed below; documentation supporting these findings is presented in Appendix C. Qualified Analytical results are presented in Appendix A.

Soil Pesticides

The sample JAX47-SB110-01-113006 was extracted one day outside of the 14 day extraction hold time. The positive and non-detected results for sample JAX47-SB110-01-113006 have been qualified as estimated (J) and (UJ), respectively.

The following compound was detected in the method blanks at the maximum concentration below:

Compound	Maximum Concentration	Blank Action Level
4,4'-DDT	0.000300 mg/kg	0.0015 mg/kg

Sample aliquot, percent solids, and dilution factors were taken into consideration when applying the blank action levels. The method blank was reported on a wet weight basis. The positive 4,4'-DDT result in sample JAX47-SB078-06-120106, JAX47-SB079-06-120106, JAX47-SB080-01-120106, JAX47-SB080-05-120106, JAX47-SB081-02-120106, and JAX47-SB081-05-120106 below the blank action level were qualified as non-detected, (U).

Calibration verification percent differences (%Ds) exceeded the 15% quality control limits for methoxychlor on instrument JSVGCECD2, on 1/03/07, at 17:36 for the primary column and secondary column. No action was taken on this basis because the associated samples were dilutions and methoxychlor was not reported from the diluted analysis.

Calibration verification %Ds exceeded the 15% quality control limits for 4,4'-DDD and 4,4'-DDT on instrument JSVGCECD2, on 12/21/06, at 21:20 for the primary column and secondary column. The positive results for 4,4'-DDT in samples JAX47-SB087-05-120106 and JAX47-DU02-120106 have been qualified as estimated (J).

Calibration verification %Ds exceeded the 15% quality control limits for 4,4'-DDT and methoxychlor on instrument JSVGCECD2, on 12/27/06, at 04:46 for the primary column and secondary column. The positive and non-detected results for 4,4'-DDT and methoxychlor in samples JAX47-DU03-120106, JAX47-SB078-01-120106, and JAX47-SB078-06-120106 have been qualified as estimated (J) or (UJ), respectively. The non-detected results for methoxychlor in samples JAX47-DU02-120106 and JAX47-SB110-05-113006 have been qualified as estimated (UJ).

Calibration verification %Ds exceeded the 15% quality control limits for 4,4'-DDT and methoxychlor on instrument JSVGCECD2, on 12/27/06, at 10:46 for the primary column and secondary column. The positive result for methoxychlor in sample JAX47-SB087-01-120106 has been qualified as estimated (J). No action was required for 4,4'-DDT.

Calibration verification %Ds exceeded the 15% quality control limits for heptachlor epoxide, gamma-chlordane, alpha-chlordane, 4,4'-DDE, endosulfan I, dieldrin, endosulfan II, 4,4'-DDT, endrin aldehyde, and methoxychlor on instrument JSVGCECD2, on 12/27/06, at 15:13 for the primary column. The secondary column had %Ds that exceeded the quality control limits for heptachlor epoxide, gamma-chlordane, alpha-chlordane, 4,4'-DDE, endosulfan I, dieldrin, endosulfan II, 4,4'-DDT, endrin aldehyde, methoxychlor, and endrin ketone. The positive and non-detected results for heptachlor epoxide, gamma-chlordane, alpha-chlordane, 4,4'-DDE, endosulfan I, dieldrin, endosulfan II, and endrin aldehyde, in samples JAX47-SB088-03-120106, JAX47-SB088-06-120106, and JAX47-SB087-05-120106 have been qualified as estimated (J) and (UJ), respectively. The positive and non-detected results for heptachlor epoxide, gamma-chlordane, alpha-chlordane, endosulfan I, dieldrin, methoxychlor, and endrin aldehyde, in sample JAX47-SB087-01-120106 have been qualified as estimated (J) and (UJ), respectively. No action was taken on the endrin ketone results because the primary column met the control limit.

Calibration verification %Ds exceeded the 15% quality control limits for 4,4'-DDT and endrin ketone on instrument JSVGCECD2, on 12/20/06, at 11:59 for the primary column. The secondary column had %Ds that exceeded the quality control limits for alpha-BHC, gamma-BHC, beta-BHC, delta-BHC, heptachlor, aldrin, heptachlor epoxide, gamma-chlordane, alpha-chlordane, 4,4'-DDT, and endrin ketone. The positive and non-detected results for 4,4'-DDT and endrin ketone in samples JAX47-SB079-06-120106 and JAX47-SB082-02-120106 have been qualified as estimated (J) and (UJ), respectively. No action was taken on the other compounds because they were not detected and within the control limits for the primary column.

Calibration verification %D exceeded the 15% quality control limit for 4,4'-DDT on instrument JSVGCECD2, on 12/20/06, at 16:23 for the primary column. The secondary column had %Ds that exceeded the quality control limits for gamma-chlordane, alpha-chlordane, endosulfan II, 4,4'-DDT, and endrin ketone. The positive results for 4,4'-DDT in samples JAX47-SB079-06-120106 and JAX47-SB082-02-120106 have been qualified as estimated (J). No action was taken on the other compounds because they were not detected and within the control limits for the primary column.

Calibration verification %Ds exceeded the 15% quality control limits for 4,4'-DDT and methoxychlor on instrument JSVGCECD2, on 12/20/06, at 18:06 for the primary column and secondary column. The positive result for methoxychlor in sample JAX47-SB110-01-113006 has been qualified as estimated (J).

Calibration verification %Ds exceeded the 15% quality control limits for alpha-BHC, heptachlor, aldrin, heptachlor epoxide, gamma-chlordane, alpha-chlordane, 4,4'-DDE, endosulfan I, dieldrin, endosulfan II, 4,4'-DDT, methoxychlor, and endrin ketone on instrument JSVGCECD2, on 12/12/06, at 00:56 for the primary column. The secondary column had %Ds that exceeded the quality control limits for 4,4'-DDT and methoxychlor. The non-detected result for methoxychlor in sample JAX47-SB081-02-120106 has been qualified as estimated (UJ). No action was taken on the other compounds because they were not detected and within the control limits for the secondary column.

Calibration verification %Ds exceeded the 15% quality control limits for heptachlor, alpha-chlordane, endosulfan I, 4,4'-DDT, and methoxychlor on instrument JSVGCECD2, on 12/12/06, at 05:41 for the primary column. The secondary column had %Ds that exceeded the quality control limits for 4,4'-DDT and methoxychlor. The non-detected result for methoxychlor in sample JAX47-SB081-02-120106 have been qualified as estimated (UJ). No action was taken on the other compounds because they were not detected and within the control limits for the secondary column.

Calibration verification %Ds exceeded the 15% quality control limits for beta-BHC and delta-BHC on instrument JSVGCECD2, on 1/16/06, at 01:49 for the primary column and secondary column. No action was taken on this basis because beta-BHC and delta-BHC were not reported from the sample runs associated with this calibration verification.

Calibration verification %Ds exceeded the 15% quality control limits for beta-BHC and delta-BHC on instrument JSVGCECD2, on 1/16/06, at 03:07 for the primary column and secondary column. No action was taken on this basis because beta-BHC and delta-BHC were not reported from the sample run associated with this calibration verification.

The surrogate tetrachloro-m-xylene had percent recoveries less than the quality control limit for method blank (6L08006-BLK1) on both columns. No action was taken on this basis because QC samples are not qualified.

The surrogate tetrachloro-m-xylene had percent recoveries less than the quality control limit for samples JAX47-SB088-06-120106, JAX47-SB087-01-120106, JAX47-SB080-05-120106, JAX47-SB081-02-120106, JAX47-SB081-05-120106, and JAX47-SB82-05-120106 or reanalyses associated with these samples on both columns. The positive and non-detected results for the aforementioned samples have been qualified as estimated (J) and (UJ), respectively.

The surrogate tetrachloro-m-xylene had percent recoveries less than the quality control limit for samples JAX47-SB079-01-120106 and JAX47-SB080-01-120106 on both columns. The positive and non-detected results for all compounds in the aforementioned samples have been qualified as estimated (J) and (UJ), respectively.

The surrogate tetrachloro-m-xylene had a percent recovery less than the quality control limit and decachlorobiphenyl had a recovery greater than the quality control limit for sample JAX47-SB110-05-113006 on

the primary column. The results for sample JAX47-SB110-05-113006 were reported from the primary column. The positive and non-detected results for JAX47-SB110-05-113006 have been qualified as estimated (J) and (UJ), respectively.

The surrogate decachlorobiphenyl had a percent recovery greater than the quality control limit for sample JAX47-SB110-01-113006 on the confirmation column. The sample was re-analyzed with similar results. No action was taken on this basis because all other surrogate recoveries met control limits.

The surrogate tetrachloro-m-xylene had percent recoveries greater than the quality control limit for sample JAX47-SB087-05-120106RE. No action was taken on this basis because only a non-detected methoxychlor results was reported from this run.

The matrix spike / matrix spike duplicate (MS/MSD) performed on sample JAX47-SB110-01-113006 had percent recoveries generally greater than the quality control limits in the MS and less than the quality control limit in the MSD. In addition the relative percent differences (RPDs) for most compounds were outside the quality control limits. Because the percent recoveries and RPDs for most compounds are out of control all positive and non-detected results for sample JAX47-SB110-01-113006 have been qualified as estimated (J) and (UJ), respectively.

The laboratory control sample (LCS) associated with batch 6L08006 had a percent recovery less than the quality control limit for endrin aldehyde on both columns. The positive and non-detected endrin aldehyde results for samples associated with batch 6L08006 have been qualified as estimated (J) and (UJ), respectively.

The field duplicate precision exceeded the 50% relative percent difference (RPD) quality control limit for 4,4'-DDT and gamma-chlordane in the field duplicate pair JAX47-SB090-03-120106 / JAX47-DU03-120106. Positive results for 4,4'-DDT and gamma-chlordane in the duplicate samples JAX47-SB090-03-120106 / JAX47-DU03-120106 were qualified as estimated (J).

The field duplicate precision exceeded the 50% relative percent difference (RPD) quality control criteria and/or was greater than 2X the reporting limit for beta-BHC and delta-BHC in the field duplicate pair JAX47-SB091-04-120106 / JAX47-DU02-120106. The positive and non-detected results for beta-BHC and delta-BHC in the duplicate samples JAX47-SB091-04-120106 / JAX47-DU02-120106 were qualified as estimated (J) and (UJ), respectively.

The laboratory reported heptachlor epoxide as a positive in the electronic database but as a non-detect on the Form I for sample JAX47-SB080-05-120106. The heptachlor epoxide result was not confirmed on the confirmation column. The heptachlor epoxide result for sample JAX47-SB080-05-120106 has been qualified as estimated (UJ) in the database.

The laboratory reported endrin ketone as a positive in the electronic database but as a non-detect on the Form I for sample JAX47-SB083-05-120106. The endrin ketone result was not confirmed on the confirmation column. The endrin ketone result for sample JAX47-SB083-05-120106 has been qualified as estimated (UJ) in the database.

The laboratory reported methoxychlor as a positive in the electronic database but as a non-detect on the Form I for sample JAX47-DU02-120106. The methoxychlor result was not confirmed on the confirmation column. The methoxychlor result for sample JAX47-DU02-120106 has been qualified as estimated (UJ) in the database.

The percent difference (%D) between analytical columns for the pesticide analyses exceeded 25% for positive results reported for several compounds in the following samples and the results have been qualified as estimated, "J":

Sample Number	Compound	RPD	Qualification
JAX47-SB110-01-113006	4,4'-DDD	42.4%	J
	Endrin aldehyde	42.4%	J
	Endrin ketone	59.9%	J

	Endrin ketone	104%	J
	Endosulfan sulfate	146%	J
JAX47-SB087-05-120106	gamma-Chlordane	32.3%	J

SPLP Pesticides

The sample JAX47-SB110-01-113006 SPLP extraction was started one day outside of the 14 day SPLP extraction hold time. The positive and non-detected results for sample JAX47-SB110-01-113006 have been qualified as estimated (J) and (UJ), respectively.

The laboratory reported a result greater than the linear calibration range of the instrument for alpha-chlordane in sample JAX47-SB110-05-113006. The alpha-chlordane result for sample JAX47-SB110-05-113006 has been qualified as estimated (J).

Calibration verification %D exceeded the 15% quality control limits for delta-BHC on instrument JSVGCECD2, on 1/13/07, at 23:47 for the primary column. The secondary column had %Ds that exceeded the quality control limits for beta-BHC and delta-BHC. The non-detected results for delta-BHC in samples JAX47-SB110-05-113006 and JAX47-SB082-02-120106 have been qualified as estimated (UJ). No action was taken on the beta-BHC results because the primary column met the control limit.

Calibration verification %Ds exceeded the 15% quality control limits for alpha-BHC, gamma-BHC, beta-BHC, delta-BHC, endrin, endrin aldehyde, and endosulfan sulfate on instrument JSVGCECD2, on 1/14/07, at 04:31 for the primary column. The secondary column had %Ds that exceeded the quality control limits for alpha-BHC, gamma-BHC, beta-BHC, delta-BHC, gamma-chlordane, endrin, endrin aldehyde, and endosulfan sulfate. The positive and non-detected results for alpha-BHC, gamma-BHC, beta-BHC, delta-BHC, endrin, endrin aldehyde, and endosulfan sulfate in samples JAX47-SB110-05-113006 and JAX47-SB082-02-120106 have been qualified as estimated (J) and (UJ), respectively. The non-detected results for alpha-BHC, gamma-BHC, endrin, endrin aldehyde, and endosulfan sulfate in sample JAX47-SB081-05-120106 have been qualified as estimated (UJ). No action was taken on the gamma-chlordane results because the primary column met the control limit.

The percent difference (%D) between analytical columns for the pesticide analyses exceeded 25% for positive results reported for several compounds in the following samples and the results have been qualified as estimated, "J":

Sample Number	Compound	% Difference	Qualification
JAX47-SB110-01-113106	Heptachlor epoxide	27.8%	J
	gamma-Chlordane	629%	J
	Methoxychlor	42.9%	J
JAX47-SB110-05-113006	beta-BHC	42.9%	J
	Endosulfan I	508%	J
	Endrin	1450%	J
	Endosulfan sulfate	71.4%	J
	Dieldrin	30.3%	J
	Heptachlor epoxide	581%	J
	alpha-Chlordane	219%	J
	Methoxychlor	120%	J
	4,4'-DDD	36.9%	J
	4,4'-DDT	36.7%	J
	Aldrin	69%	J
JAX47-SB081-02-120106	alpha-Chlordane	190%	J
JAX47-SB081-05-120106	Heptachlor epoxide	250%	J
	alpha-Chlordane	175%	J
JAX47-SB082-02-120106	Heptachlor epoxide	410%	J
	alpha-Chlordane	60.4%	J
JAX47-SB082-05-120106	alpha-Chlordane	117%	J
JAX47-SB083-01-120106	beta-BHC	31.6%	J
	Dieldrin	47.2%	J
	Endrin	36.4%	J
JAX47-SB083-05-120106	alpha-Chlordane	110%	J

Additional Comments:

Soil samples JAX47-SB110-01-113006, JAX47-SB110-05-113006, JAX47-DU02-120106, JAX47-SB082-02-120106, JAX47-SB083-01-120106, JAX47-SB087-01-120106, and JAX47-SB087-05-120106 required

dilutions for several pesticides because of concentrations greater than the linear calibration range of the instrument. All other compounds were reported from the undiluted analysis.

SPLP sample JAX47-SB110-05-113006 required a 20X dilution for 4,4'-DDD and 4,4'-DDT because of concentrations greater than the linear calibration range of the instrument. All other compounds were reported from the undiluted analysis.

Positive results less than the reporting limit (RL) were qualified as estimated "J", due to uncertainty near the detection limit.

The samples in this package exhibited difficult samples matrix. In some cases, results were reported from three different analysis of the sample. The multiple sample runs along with the difficult sample matrix made validating the appropriate result very difficult.

The laboratory calculated percent differences (%Ds) between columns instead of relative percent differences, and most of the calculations were incorrect for the SPLP sample analyses. The laboratory was asked to correct the calculations and after one week submitted forms with the same incorrect calculations. The %Ds reported by the laboratory were used to qualify data. No data was rejected because of high %Ds. All %Ds greater than 25% were qualified as estimated.

The original continuing calibrations associated with this SDG were not being compared to the correct initial calibrations. The laboratory was asked to resubmit the correct continuing to initial calibration comparisions. The correct comparisions were submitted one week after the problem was brought to the laboratories attention.

The results for several samples reported on the Form Is did not match the results reported in the database. The laboratory sometimes reported the lower concentration on the Form Is but the higher concentration in the database. The higher concentration is considered the valid result and no change was made to the database.

EXECUTIVE SUMMARY

Laboratory Performance Issues: The compound 4,4'-DDT was detected in the soil method blank. Several compounds for soil and SPLP samples exceeded the continuing calibration %D criteria resulting in qualification of the data. The continuing calibrations were not associated with the correct initial calibrations in the original data submission causing time delays for data validation.

Other Factors Affecting Data Quality: Several soil surrogate and matrix spike percent recoveries had non-compliances resulting in the qualification of data. Percent difference between columns for soil and SPLP samples exceeded criteria for several compounds resulting in qualification of the data. Field duplicate precision non-compliances resulted in qualification of the data.

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (October 1999), and Department of Defense (DoD) document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (January 2006). The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the DoD QSM."

Attachments:

Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Data Validation Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's r < 0.995 / ICP PDS Recovery Noncompliance
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient r < 0.995
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

Metals

Method: The samples were extracted by USEPA Method 3050B and analyzed by EPA Method 6010B. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications.

Semi-volatiles

Method: The samples were extracted/analyze by USEPA SW-846 Methods 3545/8081A. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- The closing Continuing Calibration Verification Standard 9LEA024 was outside the DoD QSM control limits for Endosulfan I, 4,4-DDT and Methoxychlor. There was insufficient sample for re-analysis for JAX47-SB081-02-120106. The opening continuing calibration verification standard was within the DoD QSM control limits.
- Surrogate 2,4,5,6-TCMX for JAX47-SB079-01-120106, JAX47-SB080-01-120106, JAX47-SB080-05-120106, JAX47-SB081-05-120106, JAX47-SB082-01-120106, JAX47-SB087-01-120106, JAX47-SB081-02-120106 were outside the DoD QSM control limits. The data was accepted based on the surrogate DBC being within the DoD QSM control limits.
- Surrogate DBC for JAX47-SB110-01-113006 was outside the DoD QSM control limits. The data was accepted based on the surrogate 2,4,5,6-TCMX passing the DoD QSM control limits.
- The Matrix Spike and Matrix Spike Duplicate were outside the DoD QSM control limits due to the sample matrix.
- Laboratory Control Standard for 6L08006-BS1 for the Endrin Aldehyde is outside the DoD QSM control limits but within the marginal exceedance limits.
- The closing Continuing Calibration Verification Standard 9LDA020 was outside and above the DoD QSM control limits for 4,4-DDT. Results associated with this standard/compound are considered to be estimated bias low. JAX47-SB087-05-120106 RE1, JAX47-DU02-120106 RE1 are the related samples.
- JAX47-SB110-05-113006 surrogate recoveries for 2,4,5,6-TCMX and DBC were outside the DoD QSM control limits due to sample matrix.
- Methoxychlor for Continuing Calibration Verification Standard resulted outside and below the DoD QSM limit. Any sample result associated with this standard/compound is considered to be estimated bias low. JAX47-SB087-01-120106 is the related sample.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures.

Metals

Method: The samples were extracted by USEPA Method 1312/3050B and analyzed by EPA Method 6010B. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications.

Semi-volatiles

Method: The samples were extracted/analyze by USEPA SW-846 Methods 1312/3545/8081A. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- Continuing Calibration Verification Standard 9AGA049 was outside and above the DoD QSM control limits for Beta-BHC and Delta-BHC. The method blank, matrix spike, matrix spike duplicate and laboratory control standard were all within the DoD control limits. Results associated with these standard/compounds are considered to be estimated bias high. The only sample affected was JAX47-SB110-05-113006.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures.

Overview

The sample set for NAS Jacksonville, CTO 047, SDG BR006-012, consists of eight (8) leachate and twenty (20) soil environmental samples. Two (2) field duplicate samples (JAX47-DU02-120106 and JAX47-DU03-120106) were included within this SDG. Samples JAX47-SB091-04-120106 and JAX47-SB090-03-120106, contained in SDG BR006-013, are the field duplicates of the previously referenced blind field duplicates.

All samples were analyzed for arsenic. The samples were collected by Tetra Tech NUS, Inc. on November 30 and December 1, 2006 and analyzed by Environmental Conservation Laboratories, Inc. Arsenic analyses were conducted using EPA methods 1312/3050B and 6010B methodologies.

These data were evaluated based on the following parameters:

* • Data Completeness
* • Holding Times
* • Calibration Recoveries
• Laboratory Method/Preparation Blank Analyses
* • ICP Interference Check Sample Results
* • Matrix Spike / Matrix Spike Duplicate Recoveries
* • Laboratory Control Sample Recoveries

* • Field Duplicate Precision
* • Detection Limits
* • Analyte Quantitation

* - All quality control criteria were met for this parameter.

Laboratory Method/Preparation Blank Analyses

The following contaminant was detected in the laboratory preparation blank at the following maximum concentration:

Analyte	Maximum Concentration	Action Level
Arsenic[1]	0.228 mg/kg	1.14 mg/kg

[1] Affects soil samples only.

An action level of 5X the maximum concentration was used to evaluate the sample data for blank contamination. Sample aliquot, percent solids, and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Arsenic was qualified due to laboratory blank contamination.

Notes

None.

Executive Summary

Laboratory Performance: Arsenic was qualified due to laboratory blank contamination.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Data Review", October 2004.

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

Appendix A
Qualified Analytical Results

Data Validation Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

7440-38-2	Arsenic	0.8	1		EPA 6010B

Appendix C
Support Documentation

Metals

Method: The samples were extracted by USEPA Method 1312/3050B and analyzed by EPA Method 6010B. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications.

Semi-volatiles

Method: The samples were extracted/analyze by USEPA SW-846 Methods 1312/3545/8081A. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- Continuing Calibration Verification Standard 9AGA049 was outside and above the DoD QSM control limits for Beta-BHC and Delta-BHC. The method blank, matrix spike, matrix spike duplicate and laboratory control standard were all within the DoD control limits. Results associated with these standard/compounds are considered to be estimated bias high. The only sample affected was JAX47-SB110-05-113006.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures.

Metals

Method: The samples were extracted by USEPA Method 3050B and analyzed by EPA Method 6010B. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications.

Semi-volatiles

Method: The samples were extracted/analyze by USEPA SW-846 Methods 3545/8081A. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- The closing Continuing Calibration Verification Standard 9LEA024 was outside the DoD QSM control limits for Endosulfan I, 4,4-DDT and Methoxychlor. There was insufficient sample for re-analysis for JAX47-SB081-02-120106. The opening continuing calibration verification standard was within the DoD QSM control limits.
- Surrogate 2,4,5,6-TCMX for JAX47-SB079-01-120106, JAX47-SB080-01-120106, JAX47-SB080-05-120106, JAX47-SB081-05-120106, JAX47-SB082-01-120106, JAX47-SB087-01-120106, JAX47-SB081-02-120106 were outside the DoD QSM control limits. The data was accepted based on the surrogate DBC being within the DoD QSM control limits.
- Surrogate DBC for JAX47-SB110-01-113006 was outside the DoD QSM control limits. The data was accepted based on the surrogate 2,4,5,6-TCMX passing the DoD QSM control limits.
- The Matrix Spike and Matrix Spike Duplicate were outside the DoD QSM control limits due to the sample matrix.
- Laboratory Control Standard for 6L08006-BS1 for the Endrin Aldehyde is outside the DoD QSM control limits but within the marginal exceedance limits.
- The closing Continuing Calibration Verification Standard 9LDA020 was outside and above the DoD QSM control limits for 4,4-DDT. Results associated with this standard/compound are considered to be estimated bias low. JAX47-SB087-05-120106 RE1, JAX47-DU02-120106 RE1 are the related samples.
- JAX47-SB110-05-113006 surrogate recoveries for 2,4,5,6-TCMX and DBC were outside the DoD QSM control limits due to sample matrix.
- Methoxychlor for Continuing Calibration Verification Standard resulted outside and below the DoD QSM limit. Any sample result associated with this standard/compound is considered to be estimated bias low. JAX47-SB087-01-120106 is the related sample.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures.

OVERVIEW

The sample set for CTO 047 NAS Jacksonville, SDG BR006-013 consists of five (5) solid environmental samples and five (5) Synthetic Precipitation Leaching Procedure (SPLP) samples. Two field duplicates were included in this SDG: JAX47-SB091-04-120106 / JAX47-DU02-120106 and JAX47-SB090-03-120106 / JAX47-DU03-120106. The results for samples JAX47-DU02-120106 and JAX47-DU03-120106 are contained in SDG BR006-012.The samples were analyzed for pesticides (PEST) organic compounds.

The samples were collected by TetraTech NUS on December 1, 2006 and analyzed by Environmental Conservation Laboratories, Inc. SPLP extractions and all analyses were conducted in accordance with SW-846 Methods 1312 and 8081A analysis and reporting protocols. The data contained in this SDG were validated with regard to the following parameters:

*	• Data completeness
*	• Holding times
	• Initial/continuing calibrations
	• Laboratory method blank results
	• Surrogate Recoveries
*	• Blank Spike/Blank Spike Duplicate Results
	• Matrix Spike/Matrix Spike Duplicate Results
	• Field Duplicate Results
*	• Compound Quantitation
	• Compound Identification
*	• Detection Limits

The symbol (*) indicates that quality control criteria were met for this parameter. Problems affecting data quality are discussed below; documentation supporting these findings is presented in Appendix C. Qualified Analytical results are presented in Appendix A.

Soil Pesticides

The following compound was detected in the method blank:

Compound	Maximum Concentration	Blank Action Level
4,4'-DDT	0.000167 mg/kg	0.000835 mg/kg

Sample aliquot, percent solids, and dilution factors were taken into consideration when applying the blank action levels. The method blank was reported on a wet weight basis. The positive 4,4'-DDT result in sample JAX47-SB090-06-120106 below the blank action level was qualified as non-detected, (U).

Calibration verification percent differences (%Ds) exceeded the 15% quality control limits for heptachlor, alpha-chlordane, 4,4'-DDT, methoxychlor, and endrin ketone on instrument JSVGCECD2, on 12/18/06, at 11:31 for the primary column. The secondary column had %Ds that exceeded the quality control limits for heptachlor, heptachlor epoxide, gamma-chlordane, alpha-chlordane, 4,4'-DDE, endosulfan I, dieldrin, endrin, 4,4'-DDD, endosulfan II, 4,4'-DDT, methoxychlor, and endrin ketone. The positive and non-detected results for heptachlor, alpha-chlordane, 4,4'-DDT, methoxychlor, and endrin ketone in sample JAX47-SB090-06-120106 have been qualified as estimated (J) and (UJ), respectively. No action was taken on the remaining compounds because the %Ds met control limits on the primary column.

Calibration verification percent differences (%Ds) exceeded the 15% quality control limits for aldrin and endrin aldehyde on instrument JSVGCECD2, on 12/18/06, at 18:39 for the primary column. The secondary column had %Ds that exceeded the quality control limits for heptachlor, endosulfan I, and endrin. No action was taken on this basis because the %Ds met control limits on the primary column or secondary column for all compounds.

Calibration verification percent differences (%Ds) exceeded the 15% quality control limits for 4,4'-DDE, 4,4'-DDT, and methoxychlor on instrument JSVGCECD2, on 12/19/06, at 12:04 for the primary column. The secondary column had %Ds that exceeded the quality control limits for heptachlor epoxide, gamma-chlordane, alpha-chlordane, 4,4'-DDE, endosulfan I, dieldrin, endosulfan II, 4,4'-DDT, methoxychlor, endosulfan sulfate, and endrin ketone. The positive results for 4,4'-DDE and 4,4'-DDT in sample JAX47-SB091-04-120106 have been qualified as estimated (J). No action was taken on the remaining compounds because they were not reported from the diluted run for sample JAX47-SB091-04-120106.

Calibration verification percent differences (%Ds) exceeded the 15% quality control limits for 4,4'-DDT and methoxychlor on instrument JSVGCECD2, on 12/19/06, at 16:22 for the primary column. The secondary column had %Ds that exceeded the quality control limits for 4,4'-DDT and methoxychlor. The positive result for 4,4'-DDT in sample JAX47-SB091-04-120106 has been qualified as estimated (J). No action was taken on the remaining compounds because they were not reported from the diluted run for sample JAX47-SB091-04-120106.

Calibration verification percent differences (%Ds) exceeded the 15% quality control limits for alpha-chlordane and methoxychlor on instrument JSVGCECD2, on 1/09/07, at 11:04 for the primary column. The secondary column had %Ds that exceeded the quality control limits for aldrin, heptachlor epoxide, gamma-chlordane, alpha-chlordane, endosulfan I, dieldrin, endosulfan II, 4,4'-DDT, and methoxychlor. The positive and non-detected results for alpha-chlordane and methoxychlor in the associated samples have been qualified as estimated (J) and (UJ), respectively. The positive heptachlor epoxide result for sample JAX47-SB091-04-120106 was qualified as estimated (J) because it was reported from the secondary column. No action was taken on the remaining compounds because the %Ds met control limits on the primary column.

The surrogate tetrachloro-m-xylene had percent recoveries less than the quality control limit for samples JAX47-SB-91-06-120106 and JAX47-SB-91-04-120106 on both columns. The positive and non-detected results for samples JAX47-SB-91-06-120106 and JAX47-SB-91-04-120106 have been qualified as estimated (J) and (UJ), respectively.

The surrogate tetrachloro-m-xylene had a percent recovery less than the quality control limit for sample JAX47-SB-91-01-120106 on the confirmation column. No action was taken on this basis because the results were

reported from the primary column.

The field duplicate precision exceeded the 50% relative percent difference (RPD) quality control limit for 4,4'-DDT and gamma-chlordane in the field duplicate pair JAX47-SB090-03-120106 / JAX47-DU03-120106. Positive results for 4,4'-DDT and gamma-chlordane in the duplicate samples JAX47-SB090-03-120106 / JAX47-DU03-120106 were qualified as estimated (J).

The field duplicate precision exceeded the 50% relative percent difference (RPD) quality control criteria or was greater than 2X the reporting limit for beta-BHC and delta-BHC in the field duplicate pair JAX47-SB091-04-120106 / JAX47-DU02-120106. The positive and non-detected results for beta-BHC and delta-BHC in the duplicate samples JAX47-SB091-04-120106 / JAX47-DU02-120106 were qualified as estimated (J) and (UJ), respectively.

The matrix spike / matrix spike duplicate (MS/MSD) performed on sample JAX47-SB091-04-120106 had percent recoveries less than the quality control limit for delta-BHC, 4,4'-DDE, and 4,4'-DDT in the MS and MSD. No action was taken on this basis because the pesticide concentrations for delta-BHC, 4,4'-DDE, and 4,4'-DDT were at least 2X the spike added amount. The MS/MSD recoveries for 4,4'-DDD were greater than the quality control limit. The positive result for 4,4'-DDD has been qualified as estimated (J) in sample JAX47-SB091-04-120106. The MSD recoveries for alpha-BHC, gamma-BHC, beta-BHC, heptachlor epoxide, gamma-chlordane, alpha-chlordane, dieldrin, endrin, endosulfan sulfate, and endrin ketone were less than the quality control limit. No action was taken on this basis because the MS had acceptable recoveries.

The percent difference (%D) between analytical columns for the pesticide analyses exceeded 25% for positive results reported for several compounds in the following samples and the results have been qualified as estimated, "J":

Sample Number	Compound	% Difference	Qualification
JAX47-SB090-06-120106	Dieldrin	33.3%	J
JAX47-SB091-01-120106	Endrin aldehyde	60.2%	J
JAX47-SB091-04-120106	Endrin ketone	28.9%	J
	Heptachlor epoxide	62.5%	J
JAX47-SB091-04-120106	gamma-BHC	110%	J
	Endosulfan sulfate	287%	J

SPLP Pesticides

The matrix spike / matrix spike duplicate (MS/MSD) performed on sample JAX47-SB091-04-120106 had percent recoveries greater than the quality than the quality control limit for beta-BHC in the MS and MSD. No action was taken on this basis because the pesticide concentration for beta-BHC was approximately 7X the spike added amount.

Calibration verification percent differences (%Ds) exceeded the 15% quality control limits for beta-BHC and delta-BHC on instrument JSVGCECD2, on 1/13/07, at 17:20 for the secondary column. No action was taken on this basis because all compounds met control limits for the primary column.

Calibration verification percent differences (%Ds) exceeded the 15% quality control limits for beta-BHC and delta-BHC on instrument JSVGCECD2, on 1/13/07, at 22:04 for the primary column. The secondary column had %Ds that exceeded the quality control limits for beta-BHC, delta-BHC, and endrin. The non-detected results for beta-BHC and delta-BHC in sample JAX47-SB091-01-120106 have been qualified as estimated (UJ). No action was taken on the endrin results because the primary column met the control limit.

The percent difference (%D) between analytical columns for the pesticide analyses exceeded 25% for positive results reported for several compounds in the following samples and the results have been qualified as estimated, "J":

Sample Number	Compound	% Difference	Qualification
JAX47-SB090-03-120106	Dieldrin	33.3%	J
JAX47-SB091-04-120106	gamma-Chlordane	72.7%	J
JAX47-SB090-03-120106	alpha-Chlordane	150%	J
	Endosulfan II	157%	J
JAX47-SB090-06-120106	gamma-Chlordane	267%	J
	alpha-Chlordane	150%	J
	Heptachlor epoxide	350%	J
JAX47-SB091-01-120106	alpha-Chlordane	107%	J
JAX47-SB091-04-120106	Methoxychlor	150%	J
	alpha-Chlordane	243%	J
JAX47-SB091-06-120106	alpha-Chlordane	175%	J

Additional Comments:

Soil sample JAX47-SB091-04-120106 required a 10X dilution for beta-BHC, delta-BHC, 4,4'-DDE, and 4,4'-DDT because of concentrations greater than the linear calibration range of the instrument. All other compounds were reported from the undiluted analysis.

SPLP sample JAX47-SB091-04-120106 required a 20X dilution for beta-BHC and delta-BHC because of concentrations greater than the linear calibration range of the instrument. All other compounds were reported from the undiluted analysis.

Positive results less than the reporting limit (RL) were qualified as estimated "J", due to uncertainty near the detection limit.

EXECUTIVE SUMMARY

Laboratory Performance Issues: The compound 4,4'-DDT was detected in the soil method blank. Several compounds for soil and SPLP samples exceeded the continuing calibration %D criteria resulting in qualification of the data.

Other Factors Affecting Data Quality: Several soil surrogate and matrix spike percent recoveries had non-compliances resulting in the qualification of data. Percent difference between columns for soil and SPLP samples exceeded criteria for several compounds resulting in qualification of the data.

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (October 1999), and Department of Defense (DoD) document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (January 2006). The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the DoD QSM."

Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$ / ICP PDS Recovery Noncompliance
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

Metals

Method: The samples were extracted by USEPA Method 3050B and analyzed by EPA Method 6010B. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications.

Semi-Volatiles

Method: The samples were extracted/analyzed by USEPA SW-846 Methods 3545/8081A. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- JAX47-SB091-01-20106 was submitted for EPA method 8081A but was not requested on the Chain of Custody form. This sample was analyzed per client request.
- Surrogate 2,4,5,6-TCMX for JAX47-SB091-04-120106 and JAX47-SB091-06-120106 was outside the DoD QSM control limits. The data was accepted based on the surrogate DBC being within the DoD QSM control limits.
- 4,4 DDT for Continuing Calibration Verification Standard 4 resulted outside and below the DoD QSM limit. Any sample result associated with this standard/compound is considered to be estimated bias low.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures.

Metals

Method: The samples were extracted by USEPA Method 1312/3050B and analyzed by EPA Method 6010B. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications.

Semi-Volatiles

Method: The samples were extracted/analyzed by USEPA SW-846 Methods 1312/3545/8081A. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- Matrix Spike and Matrix Spike Duplicate were outside the DoD QSM control limits.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures.

Overview

The sample set for NAS Jacksonville, CTO 047, SDG BR006-013, consists of five (5) leachate and five (5) soil environmental samples. Samples JAX47-SB090-03-120106 and JAX47-SB091-04-120106 are the field duplicate pairs of samples JAX47-DU03-120106 and JAX47-DU02-120106, respectively.

All samples were analyzed for arsenic. The samples were collected by Tetra Tech NUS, Inc. on December 6, 2006 and analyzed by Environmental Conservation Laboratories, Inc. Arsenic analyses were conducted using EPA methods 1312/3050B and 6010B methodologies.

These data were evaluated based on the following parameters:

* • Data Completeness
* • Holding Times
* • Calibration Recoveries
• Laboratory Method/Preparation Blank Analyses
* • ICP Interference Check Sample Results
* • Matrix Spike / Matrix Spike Duplicate Recoveries
* • Laboratory Control Sample Recoveries
* • Detection Limits
* • Analyte Quantitation

* - All quality control criteria were met for this parameter.

Laboratory Method/Preparation Blank Analyses

The following contaminant was detected in the laboratory preparation blank at the following maximum concentration:

Analyte	Maximum Concentration	Action Level
Arsenic[(1)]	0.161 mg/kg	0.805 mg/kg

[(1)] Affects soil samples only.

An action level of 5X the maximum concentration was used to evaluate the sample data for blank contamination. Sample aliquot, percent solids, and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Arsenic was qualified due to laboratory blank contamination.

Notes

None.

Executive Summary

Laboratory Performance: Several soil samples were qualified due to blank contamination.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Data Review", October 2004.

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

Appendix A
Qualified Analytical Results

Data Validation Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

Support Documentation

Metals

Method: The samples were extracted by USEPA Method 1312/3050B and analyzed by EPA Method 6010B. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications.

Semi-Volatiles

Method: The samples were extracted/analyzed by USEPA SW-846 Methods 1312/3545/8081A. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- Matrix Spike and Matrix Spike Duplicate were outside the DoD QSM control limits.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following *signatures*.

Semi-Volatiles

Method: The samples were extracted/analyzed by USEPA SW-846 Methods 3545/8081A. Soils were received into the laboratory in satisfactory condition.
Comments: The analyses for these samples were completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- JAX47-SB091-01-20106 was submitted for EPA method 8081A but was not requested on the Chain of Custody form. This sample was analyzed per client request.
- Surrogate 2,4,5,6-TCMX for JAX47-SB091-04-120106 and JAX47-SB091-06-120106 was outside the DoD QSM control limits. The data was accepted based on the surrogate DBC being within the DoD QSM control limits.
- 4,4 DDT for Continuing Calibration Verification Standard 4 resulted outside and below the DoD QSM limit. Any sample result associated with this standard/compound is considered to be estimated bias low.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. OVERVIEW

The sample set for CTO 047, NAS Jacksonville, SDG BR006-014 consists of sixteen (16) environmental aqueous samples. All above aqueous samples were analyzed as indicated above.

The samples were collected by TetraTech NUS on December 1, 5, 8, 2006 and analyzed by Environmental Conservation Laboratories, Inc. All analyses were conducted in accordance with Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria using SW-846 Methods 8260B, 8270C and 8081A analytical and reporting protocols. The data contained in this SDG were validated with regard to the following parameters:

* • Data completeness
* • Holding times
* • GC/MS Tuning
• Initial and continuing calibration
• Blank results
• Surrogate spike recoveries
* • Internal standard recoveries
• Blank Spike/Blank Spike Duplicate Results
• Matrix Spike/Matrix Spike Duplicate Results
* • Detection Limits
• Compound Quantitation
* • Compound Identification

The symbol (*) indicates that all quality control criteria were met for this parameter. Problems affecting data quality are discussed below; documentation supporting these findings is presented in Appendix C. Qualified Analytical results are presented in Appendix A. Results as reported by the laboratory are presented in Appendix B.

Volatiles

The laboratory reported down to Reporting Limits (RL) on all Form Is for all compounds instead of to Method Detection Limits (MDLs). However, MDLs were included in the database for all compounds and these limits were used for validation.

The initial calibration %RSD was greater than the 30% QC limit for methyl cyclohexane. Positive results were qualified estimated (J) in samples JAX47-MW11S-120106 and JAX47-MW25S-120806. Nondetect results were qualified estimated (UJ) in all other samples.

The continuing calibration performed on 12/08/06 at 10:04 on instrument JVGCMS1 yielded a %D that exceeded the 25% quality control criterion for tetrachloroethene. Positive results were qualified estimated (J) in the affected samples. Nondetect results were qualified estimated (UJ) in the affected samples.

The continuing calibration performed on 12/11/06 at 16:53 on instrument JVGCMS1 yielded a %D that exceeded the 25% quality control criterion for dichlorofluoromethane, acetone, carbon disulfide, and tetrachloroethene. The positive result for tetrachloroethene in sample JAX47-MW17S-120506 was qualified estimated (J). Nondetect results were qualified estimated (UJ) in the aforementioned sample for the other noncompliant compounds.

The continuing calibration performed on 12/12/06 at 11:00 on instrument JVGCMS1 yielded a %D that exceeded the 25% quality control criterion for dichlorofluoromethane, acetone, carbon disulfide, 1,1-dichloroethane, 2-butanone, chloroform, 1,1,1-trichloroethene, 1,2-dichloroethane, tetrachloroethene and 1,2,4-trichlorobenzene. Positive results were qualified estimated (J) in the affected samples. Nondetect results were qualified estimated (UJ) in the affected samples.

The following compounds were detected in the method blanks at the following maximum concentration:

Compound	Maximum Concentration	Action Level
Acetone	2.28 ug/L	22.8 ug/L
1,2,4-trichlorobenzene	0.210 ug/L	1.05 ug/L

An action level of 10X the maximum contaminant concentration was established to evaluate blank contamination for these compounds for acetone and 5X the maximum contaminant concentration for 1,2,4-trichlorobenzene. Positive results were qualified as indicated above.

The LCS sample 6L12026-BS1 had a %R for bromodichloromethane that was below the QC limit. No positive results were reported for this compound. Nondetect results were qualified estimated (UJ) for the affected samples.

Semivolatiles

The laboratory reported down to Reporting Limits (RL) on all Form Is for all compounds instead of to Method Detection Limits (MDLs). However, MDLs were included in the database for all compounds and these limits were used for validation.

The initial calibration %RSD was greater than the 30% QC limit for pentachlorophenol. The positive result was qualified estimated (J) in sample JAX47-937MW4S-120106. Nondetect results were qualified estimated (UJ) in all other samples.

The continuing calibration performed on 12/17/06 at 13:47 on instrument JVGCMS1 yielded a %D that exceeded the 25% quality control criterion for 3-nitroaniline, carbazole and N-nitrosodiphenylamine. No positive results were reported for these compounds in the affected samples. Nondetect results were qualified estimated (UJ) in the affected samples.

The continuing calibration performed on 12/18/06 at 17:53 on instrument JVGCMS1 yielded a %D that exceeded the 25% quality control criterion for 4-chloroaniline, 3-nitroaniline, 4-nitroaniline, 2,4-dinitrophenol, 2-methyl-4,6-dinitrophenol and carbazole. No positive results were reported for these compounds in the affected samples. Nondetect results were qualified estimated (UJ) in the affected samples.

The continuing calibration performed on 12/19/06 at 11:18 on instrument JVGCMS1 yielded a %D that exceeded the 25% quality control criterion for 4-chloroaniline, 3-nitroaniline, 4-nitroaniline, 2-methyl-4,6-dinitrophenol and carbazole. These compounds were not reported in the affected samples.

Sample JAX-MW11S-120106 had a 10X dilution factor applied for Napthalene and 2-methylnapthalene.

The LCS sample 6L12004-BS1 had a %R for 4-chloroaniline, 3-nitroaniline, 4-nitroaniline, N-nitrosodiphenylamine and carbazole that exceeded the QC limit. No actions were taken because no positive results were reported for these compounds.

The LCS sample 6L08004-BS1 had a %R for 3-nitroaniline, 4-nitroaniline, N-nitrosodiphenylamine and carbazole that exceeded the QC limit. No actions were taken because no positive results were reported for these compounds.

Surrogate recovery was high for 2,4,6-tribromophenol in samples JAX47-MW16D-120506, JAX47-MW17D-120506, JAX47-MW14S-120806 and JAX47-MW12S-120806 and for nitrobenzene-d5 in sample JAX47-MW17D-120506. No action was taken for these noncompliances because no positive results were reported in the affected samples.

Pesticides

The laboratory reported down to Reporting Limits (RL) on all Form Is for all compounds instead of to Method Detection Limits (MDLs). However, MDLs were included in the database for all compounds and these limits were used for validation.

The following compound was detected in the method blank prepared on 12/08/06:

Compound	Maximum Concentration	Action Level
4,4'DDT	0.002 ug/L	0.010 ug/L

An action level of 5X the maximum contaminant concentration was established to evaluate blank contamination for the above compound Sample aliquot and dilution factors were taken into consideration when applying the blank action level. Positive results less than the blank action level were qualified as nondeteced. The positive results were qualified nondetect (U) for 4,4'DDT in samples JAX47-MW11D-120106 and JAX47-937MW11S-120106.

The LCS sample 6L11022-BS1 had a %R for alpha-chlordane that was below the QC limit on column 1. No action was taken because the noncompliance only occurred on one column. Additionally, the %R for

endrin ketone was below the QC limit on column 1 and column 2. Positive results in samples JAX47-MW14S-120806, JAX47-MW12S-120806 and JAX47-MW17S-120506 were qualified estimated (J). Nondetect results for endrin ketone in samples associated with this batch were qualified estimated (UJ).

The dual column confirmation %D was greater than the 25% QC limit for at least one compound analyzed on 11 out of the 16 samples. The affected results were qualified as estimated (J) for this noncompliance.

The continuing calibration performed on 12/12/06 at 21:31 on instrument JSVGCECD2 yielded a %D that exceeded the 15% quality control criterion for methoxychlor on column 1. No action was taken for this noncompliance because the %D was only exceeded for one column.

The continuing calibration performed on 12/13/06 at 02:43 on instrument JSVGCECD2 yielded a %D that exceeded the 15% quality control criterion for alpha-BHC and methoxychlor on column 1. No action was taken for these noncompliances because the %D was only exceeded for one column.

The continuing calibration performed on 12/13/06 at 07:03 on instrument JSVGCECD2 yielded a %D that exceeded the 15% quality control criterion for methoxychlor on column 1 and column 2. Positive and nondetect results for methoxychlor were qualified estimated (J)/(UJ) in associated samples for this noncompliance.

The continuing calibration performed on 12/13/06 at 13:19 on instrument JSVGCECD2 yielded a %D that exceeded the 15% quality control criterion for methoxychlor on column 1 and column 2. Positive and nondetect results for methoxychlor were qualified estimated (J)/(UJ) in associated samples for this noncompliance.

The continuing calibration performed on 12/13/06 at 19:59 on instrument JSVGCECD2 yielded a %D that exceeded the 15% quality control criterion for 4,4'DDT on column 1. The positive result for 4,4'DDD on column 1 in sample JAX47-MW17S-120506 was qualified estimated (J) for this noncompliance.

The continuing calibration performed on 12/14/06 at 20:25 and 22:09 on instrument JSVGCECD2 yielded a %D that exceeded the 15% quality control criterion for methoxychlor on column 1 and column 2. No action was taken for this noncompliance because methoxychlor was not analyzed for in the associated samples.

The surrogate recovery (%R) for tetrachloro-m-xylene (TCX) was high for sample JAX47-MW14S-120806. The surrogate recovery (%R) for decachlorobiphenyl (DCB) was high for samples JAX47-MW25S-120806, JAX47-MW14S-120806, JAX47-MW12S-120806 and JAX47-MW28S-120806. Positive results were qualified estimated (J) in the associated samples.

The calibration range for sample JAX47-MW17S-120506 was exceeded on 12/13/06 at 18:41 on instrument JSVGCECD2 for 4,4'-DDD. The result was qualified as estimated, (J) for this noncompliance.

Alpha-BHC in sample JAX47-MW17S-120506 was not detected on both columns and was qualified nondetected and estimated (UJ) for this noncompliance.

In the matrix spike MW-1, the %R was marginally below the lower QC limit for both the MS and MSD samples for endrin ketone. No action was taken for this noncompliance.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Several volatile, semivolatile, and pesticide calibration noncompliances were noted. Dual column confirmation noncompliance. Surrogate noncompliances were noted in the

semivolatile and pesticide fractions. Blank contamination was noted in all fractions. Form Is did not contain MDLs. Several pesticide dual column confirmation noncompliances were noted.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (10/99) and Department of Defense document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (January 2006). The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the DoD QSM for guidelines and the Quality Assurance Project Plan (QAPP)."

Volatiles

Method: The samples were analyzed by USEPA Method 8260B (VOA vial field sampling followed by purge and trap then capillary column GC/MS) for waters upon receipt to the laboratory in satisfactory condition.
Comments: The volatile analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- The Matrix Spike and Matrix Spike Duplicate had several compounds that were outside the DoD QSM control limits. Data was accepted based on an acceptable Laboratory Control Standard and precision data.
- Laboratory Control Standard was outside the DoD QSM control limits for Bromodichloromethane but was within the DoD QSM marginal exceedance limits.
- Several compounds did not meet the specified control limits for the Continuing Calibration Check Standard. Data was accepted on criteria that all CCC and SPCC compounds passed.

Metals

Method: The samples were extracted by USEPA Method 3050 and analyzed by EPA Method 6010 for soils upon receipt to the laboratory in satisfactory condition.
Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- The dissolved Arsenic result for JAX47-937MW4S-120106 was higher than the total Arsenic result. Sample was re-prepped and re-analyzed producing similar results. Both sets of data were reported.

Semi-volatiles

Method: The samples were extracted/analyze by USEPA SW-846 Methods 3545/8270c for waters upon receipt to the laboratory in satisfactory condition.

Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- Due to insufficient sample, the MS/MSD was performed on an alternative sample not related to this project.
- The surrogate 2,4,6-Tribromophenol for JAX47-MW12S-120806 was outside the DoD QSM control limits. All the remaining surrogates were with the acceptable limit and data was accepted.
- Several compounds did not meet the specified control limits for the Continuing Calibration Check Standard. Data was accepted on criteria that all CCC and SPCC compounds passed.
- Laboratory Control Standard, Matrix Spike and Matrix Spike Duplicate exceeded DoD QSM control limits for several compounds. The associated samples were clean for those compounds, therefore data was accepted.

Method: The samples were extracted/analyze by USEPA SW-846 Methods 3545/8081c for soils upon receipt to the laboratory in satisfactory condition.

Comments: The analyses for these samples were satisfactorily completed within sample holding times and met the corresponding specifications with the following note/exceptions:

- Due to insufficient sample, the MS/MSD was performed on an alternative sample not related to this project.
- Laboratory Control Standard, Matrix Spike and Matrix Spike Duplicate for Endrin Ketone was outside the DoD QSM control limits but was within DoD QSM marginal exceedance limits.
- The surrogate DBC was outside DoD QSM control limits for the following samples: JAX47-MW12S-120806, JAX47-MW25S-120806, JAX47-MW28S-120806. The surrogate 2,4,5,6-TCMX was within the DoD QSM control limits therefore data was accepted.
- JAX47-MW14S-120806 surrogate recovery for DBC was outside the DoD QSM control limits.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures.
