CONCURRENCE FOR NO FURTHER ACTION SIGNATURE PAGE

Site 7 – HMX Spill, Slurry Mix Building
Naval Support Facility, Indian Head
Indian Head, Maryland

In 2005, in partnership with the United States Environmental Protection Agency (USEPA) Region III and the Maryland Department of the Environment (MDE), the Navy prepared this decision document for Site 7 (HMX Spill, Slurry Mix Building) at the Naval Support Facility, Indian Head in Indian Head, Maryland. Based upon a review of available information, it is the consensus of the Department of the Navy, the USEPA Region III, with concurrence from the MDE, and members of the Indian Head Installation Restoration Team (IHIRT), that Site 7 requires no further action under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), as amended. As appropriate, constituent concentrations, pathways, and receptors were evaluated by comparing analytical data to the most recent version of USEPA Region III risk-based concentrations (RBCs), conducting a human health risk evaluation, conducting an ecological risk evaluation, reviewing historical site data, and applying best professional judgment. Details are provided in the Site Screening Process (SSP) Report. In the event that contamination posing an unacceptable risk to human health or the environment is discovered after execution of this agreement, the IHIRT agrees to reevaluate Site 7 as deemed necessary.
