Attached are the Navy RPM comments.

One main comment that is repeated throughout the document is linking the metals contamination in groundwater to a CERCLA release. Through multiple scoping sessions we have been told that this wouldn't be able to be definitively linked to a CERCLA release. With that said Navy had decided that if there was a risk that was unable to be risk managed we would complete a remedial action to correct the issue; with the thought that EPA wouldn't let us walk away from contamination because there was no supposed link to the soil burning activities. I would prefer to remove the text stating linking it to a CERCLA release unless you can explain to me why it is necessary to have it stated in those terms.

Thanks.
