100					OPER & TRNG FAC				
110					AIRFIELD PAVEMENTS				
111					RUNWAYS				
<p>Series 111 Category Codes include criteria for runways for fixed wing aircraft and runways or landing pads for rotary wing aircraft. Runways are prepared surfaces for the landing and takeoff of both fixed wing and rotary wing aircraft. Landing pads are prepared surfaces for the Vertical Takeoff and Landing (VTOL) of rotary wing aircraft (including V-22).</p>

<p>Refueler trucks are the preferred method to fuel aircraft. However, direct fueling stations may be considered for: (1) carrier aircraft, including helicopters, when the mission dictates a continuing need for rapid turnaround without shutting engines down, (2) cargo/transport aircraft with prescribed short ground times or (3) patrol aircraft which require an average refueling of 2500 gallons or more.</p>

122					MARINE FUEL DISPENSING				
<p>This basic Category Code includes the following: Marine fueling facilities designed for small vessels and capital ships that should be able to refuel the largest ship that can dock at the station's waterfront. Small craft fueling stations used to refuel such small craft as crash boats and administrative boats. Marine ready fuel storage tanks for the ready issue operation storage of a particular grade of fuel for small boats and yard craft.</p>

152					WHARFS				

A wharf is an open type marginal structure for the berthing of vessels; it is usually connected to the shore at more than one point. In general, the planning criteria that apply to piers are also applicable to wharves. Either may serve the same practicable purpose, however, since their physical design and layout will be much different, their capacities for berthing and cargo handling will vary. Piers are generally preferable structures; however, certain locations will dictate the use of a wharf rather than a pier because of the marginal fairway and topography involved.

Facilities designated for the service career and reserve training of Navy and Marine Corps personnel. There are two basic categories under this code: 171 TRAINING BUILDINGS, and 179 TRAINING FACILITIES OTHER THAN BUILDINGS									
171					TRAINING BUILDINGS				
Class room/special buldings designed to provide space for training and general instruction. Facilities in this basic category are identified according to the nature of instruction provided. The major building types are: 171-1.1 Academic Instruction Building, 171-1.2 Reserve Training Building, 171-1.3 Applied Instruction Building, and 171-1.4 Operational Trainer Space.

219 MAINT-INSTAL
REPAIR & OPER

This basic category includes maintenance shops for repair and overhaul of installation facilities (public works and public utilities), including installed shop and other and other equipment, and utility distribution systems, used in support of maintenance operations at military and/or industrial installations. The maintenance and repair of vehicles and weight-handling and construction equipment, utility plant, and maintenance shops are not included in this category. For the former, see Category Code series 214 and 218, and the latter, see Category Code series 811.

220					PRODUCTION				
<p>The production facility is part of the production system that processes raw materials, components and labor into finished goods.1 Production facilities are typically one-of-a-kind; therefore space requirements should be developed from the ground up; first for the individual workstations; then departmental requirements by summing the workstations within the department. Applying industrial engineering practices and methods would provide sufficient and accurate space requirements. Accurate future product demand forecasts are necessary so the facility can be sized for future growth. The facility should be sized for forecasted production growth 5 to 10 years beyond initial operating capability.</p>									
221					PRODUCTION - AIRCRAFT				
<p>Facilities for constructing and assembling new components, air frames and related assemblies and spares, aircraft engines and related spares, and aircraft equipment and spares.</p>

This category group consists of non-covered storage areas, paved or otherwise established, for storage of General Supply Materials. Several of the excluded types of functions include miscellaneous materials coded under other basic category codes (e.g., ammunition on open pad coded under 425-10 and open storage areas for non-supply oriented functions coded under 852-35). This code also refers to open areas primarily to provide space for the receipt, processing, staging and issue of material that has been deemed excess to Navy needs and is awaiting some resale or final disposal and whose value is not significantly impacted by uncovered exposure to the environment. This code may also be used for such open yards required for staging or storage of items being held for their scrap value to ongoing missions or systems.

810					ELECTRIC POWER				
811					ELECTRIC POWER- SOURCE				
<p>Electric power for base facilities operation is normally derived from local commercial sources. Where commercial sources are used, transformer substations are required to transform the electrical energy to satisfy the station's load requirement. Where commercial electricity is not available, power plants will be planned. Standby generator plants are planned to provide adequate uninterrupted power supply in emergencies. Planning for power plants will include the building, the power generating equipment, and supporting appurtenances such as fuel storage for plant operation, auxiliary power, and switching stations.</p>

812					ELECT TRANSMN/DISTR LINES				
Distribution and transmission lines are required to supply electricity to buildings, street lighting, floodlighting, and perimeter lighting. Lines may be either overhead or underground and will include poles, ductbanks, and controls to distribute electrical energy from the source to each using facility. Planning for distribution and transmission lines will require engineering calculation of critical power demand loads and future load growth. Airfield pavement lighting is planned as described under Category Code 136.

822					HEAT- TRNSMSN/DISTR LINES				

This basic category encompasses the transmission and distribution lines for steam and associated hot water lines throughout an installation. In temperate and tropical climates and at locations where the water table is high, steam lines will be aboveground. Routing of steam or hot water lines requiring underground installation under runways and taxiways should be held to a minimum to avoid interference by maintenance and repair operations. Adequate clearances shall be provided above roads, railroads, streets, walks, and tow-ways.

830					SEWAGE AND WASTE				
<p>Category group 830 describes the facilities required for the collection, transportation, treatment, and disposal of sewage and industrial waste, and disposal of storm drainage water in storm and sanitary sewer systems. Components of sewage and refuse facilities include sewage treatment plants, outfall sewer lines, septic tanks, septic tank drain fields, sanitary sewers, sewage pumping stations, and incinerators. Certain industrial waste must be kept separately and treated separately from the sanitary sewage. In planning for sewage and waste facilities cognizance shall be taken of the Federal Water Pollution Control Act as amended, applicable to municipalities, industries, and others that may contribute to the pollution of surface and underground waters in the United States.</p>

842 WATER-DISTRIBTN
SYS POTABL

Potable water will be transmitted from a storage tank or a treatment plant to all station demand points through a pipeline. An engineering study of the pressures and quantities of water required at the demands points will serve as the basis for planning the sizes and lengths of pipe required for the water distribution pipelines. Planning for a potable water distribution pipeline will include requirements for piping, valves, pumps, connections, excavation, and backfilling. The pipeline shall be listed in linear feet (LF). Requirements will be determined by an engineering study.

843					WATER, FIRE PROTECTION				
<p>Fire protection requirements often dominate the plans of a water supply system. When the supply of fresh water is not adequate, salt water may be used. Since fire flow demands are usually greater than either the domestic or industrial demands, the capacity of the system will generally be determined by the fire flow demands. Fire flows are expressed in gallons per minute and are separate from the other water requirements.</p>

Units Of Measure And Their Symbols

AC	ACRES	BD	HOSPITAL BEDS, NORMAL CAPACITY
BL	BARRELS (42 GALS EACH)	BX	BOXES
CF	CUBIC FEET	CM	CUBIC FEET/MINUTE
CP	CANDLE POWER	CY	CUBIC YARDS
DS	DEPTH OF WATER OVERSILL @ HIGH TIDE	DW	DEPTH OF WATER OVERSILL @ LOW TIDE
EA	EACH	FA	FAMILY UNITS (HOUSING)
FB	LINEAR FEET OF BERTHING	FP	FIRING POINT (FIRING RANGES)
GA	GALLONS	GM	GALLONS PER MINUTE
HO	HOLES (GOLF COURSE)	IN	INCHES
KG	THOUSANDS OF GALLONS PER DAY	KV	KILOVOLT AMPERES
KW	KILOWATTS	LA	LANES (BOWLING)
LC	LIGHT CARE, HOSPITAL SPACE	LF	LINEAR FEET
LN	SET OF FIRING POINTS	MB	MILLIONS OF BTU PER HOUR
ME	METERS	MG	MILLIONS OF GALLONS
MI	STATUTE MILES	MW	MEGAWATTS
NF	NET SQUARE FEET (HOUSING)	NS	NET SQUARE FEET (STORAGE)
OL	OUTLETS, NUMBER OF	OU	OPERATING UNITS
PH	POUNDS PER HOUR	PN	PERSONS, DESIGN CAPACITY
SE	SEATS, NUMBER OF	SF	SQUARE FEET
SH	STACKING HEIGHT	SI	SITES
SP	STARTING POINT	SY	SQUARE YARDS
TC	TOTAL CUBIC FEET	TH	TONS PER HOUR
TN	TONS	TR	TONS, REFRIGERATION
VE	NUMBER OF VEHICLES
