

THE YOKOSUKA, NEGISHI, & IKEGO GUIDE TO COLLECTION AND DISPOSAL OF HOUSEHOLD HAZARDOUS WASTES

Leftover household products that contain corrosive, toxic, ignitable, or reactive ingredients are considered to be "household hazardous waste" or HHW". Products, such as paints, cleansers, oils, Lead-Acid batteries, pesticides, solvents, automotive products, garden products and etc. that contain potentially hazardous ingredients require special care when you dispose of them. To properly manage the collection and disposal of HHW, the NAVY Family Housing Self Help Center and the CFAY PWD Environmental Division are providing the Yokosuka, Negishi, & Ikego a guide to collect and dispose of HHWs.

All Navy Housing Residents should:

- 1) Completely use up the products listed in the attached Household Hazardous Waste Turn-In Guide.
- 2) Give usable, leftover products listed in the attached Household Hazardous Waste Turn-In Guide to friends, neighbors, or donate to churches, schools, or community groups.
- 3) Use non-hazardous or less hazardous alternative whenever possible.
- 4) Follow the instructions in the attached Household Hazardous Waste Turn-In Guide for the proper disposal of HHW. The Household Hazardous Waste Turn-In Guide also lists the location of the HHW collection points at Yokosuka, Negishi and Ikego Navy Family Housing Self Help Facilities and their hours of operation.

This program is an effort to reduce the amount of HHW being disposed of as solid waste within the Yokosuka Naval Complex. A successful HHW collection and disposal program requires only a small effort at the source resulting in conserving natural resources and protecting the environment. It makes sense and it's the right thing to do for the U.S. Navy, our host nation of Japan, and the planet Earth.
