## Introduction

The purpose of this document is to address comments on the Draft Preliminary Assessment / Site Inspection (PA/SI) report for the Site 49, Suspected Minor Dump located at Marine Corps Air Station (MCAS) New River. The North Carolina Department of Environment and Natural Resources (NCDENR) Superfund Section provided the comments listed below. Responses to comments are provided in bold.

## NCDENR Comments (dated November 23, 2010)

### *Specific Comment*

1. Section 3.1.2 on the bottom of page 3-1 discusses the location of the drainage pipe from building AS810 as shown on Figure 2-1. The paragraph states that the location of the drain pipe is in the vicinity of IR49-IS07. This is probably a typo. The sample location closest to the drain pipe is IS01. Please make appropriate changes.

**The text will be revised to state the location of the drain pipe is in the vicinity of IR49-IS01.**

2. Section 3.1.8 on page 3-4 states that IDW for off-site disposal was staged at the Parachute Tower Road staging area. In the future please do not store IDW at Parachute Tower Road. All IDW should be staged on Site or at less than 90 day storage facilities. Staging of IDW for work at the Air Station should be staged at the less than 90 day facility at the Air Station and IDW for work at Main Side sites should be stored at the 90 day facility on Main Side.

**IDW generated at Site 49 was staged in accordance with the 2010 Base Waste Management Plan agreed upon by the partnering team. This issue was discussed at the February 2011 partnering team meeting and going forward IDW will be staged in accordance with the resolutions from that meeting.**
