Subject: Re: Response to Comments - Draft OU14 Phase I Tech Memo

Good Morning All,

I reviewed Michelle's comments (before the were sent to the team) and the Draft Phase I Interim Report. The comment is correct and the response is acceptable. The response actually supports the comment. This can all be discussed during the allotted meeting time for the OU14 discussion. I just want to make sure that we are all on the same page. The intent of the comment is to make sure we have crossed all of the t's and dotted all of the i's. An eco assessment at this point is merely an evaluation and what is presented in the response is acceptable.

In reviewing the document, one question came to mind, that would help direct the investigation. Is the gw contamination a result of one source area, (wash rack) or are there multiple areas? It would help to have groundwater plume maps drawn from the data points. This would present a quick visual on what is going on in the area.

Subject: Response to Comments - Draft OU14  
Tech Memo

Phase I

Hello team:

Attached is a Response to Comments (RTC) document addressing NCDENR's and EPA's comments on the Draft OU14 Phase I Tech Memo. The NCDENR comment was relatively minor, but the response to the EPA comment might need to be discussed. Please review the RTC prior to the partnering meeting so that we can discuss the responses during the time period allocated for OU14. However, feel free to respond with your thoughts or concerns prior to the meeting if you wish.

The attached file is a PDF. We have been having difficulties lately transferring files via email to both George and Gena. Please let me know if you can't access the attachment and we'll figure something out.

Thanks!

Doug
