Subject: Supplemental Toxicity Sampling SAP

Chris & Bill,

Peg & I have looked over the Draft Sampling and Analysis Plan for Supplemental Toxicity Sampling of Composted Material from MFA & MFB. We have the following comments:

- 1) Section 2.2.2. refers to sample collection in accordance with the approved FS-QAPP. Note that the sampling procedures in the QAPP are for sampling of windrows while still at the Biofacility. As this supplemental sampling is done on windrows that have been backfilled, we need to include the sampling procedures for backfilled "mature" windrows. This information should include depth of sampling within the target windrow, sampling equipment information, etc.
- 2) Table 2-1 mistakenly refers to Figures H2 and H4 instead of I2 & I4.

Thanks!
Pete
