QED PUMP CERTIFICATION

The enclosed pump has been tested for the EPA priority pollutant parameters under conditions more critical than those required in current accepted ground water monitoring practices. We certify that this pump will not adversely affect the results of your ground water sample analysis.

Summary of Field Activities
October 18, 1998 through November 12, 1998**

The following is a summary of field activities conducted October 18 through November 12, 1998 at the NSWC Crane facility, Crane, IN. Monitoring wells were developed at the four sites, the Ammunition Burning Grounds (ABG), Old Rifle Range (ORR), Demolition Range (DR) and Sanitary Waste Landfill (SWL). Dedicated bladder pumps were installed in 40 wells at the ABG, ORR and DR sites; two wells at the ORR as well as all wells at the SWL are in need of pump installation.

Well development was accomplished by both surging and pumping the wells. Purge water was contained in a 300-gallon pick-up truck mounted tank and discharged into NSWC-permitted sanitary sewer system via on site manhole #327.

Eighteen monitoring wells, two surface water and two spring water points were sampled completing Round 1 sampling at the ABG. All monitoring points were sampled following the procedures laid-out in the May 1998 FSP.

The dedicated bladder pumps installed were QED Environmental Systems, Well Wizard® Pump Model P1150. All pumps come from the factory "certified clean" and the certificate for each pump was maintained and will be included in the Round 1 report. The 12 pumps for the SWL have been purchased and are being stored on site and will be installed during an upcoming field effort.
