Subject: FW: Biofacility Quarterly Report

Peter,

I received comments from EPA on the 2nd quarter 2002 IPR. The only comment addressed the 1st paragraph of section 3.5. Please rewrite the 1st paragraph of section 3.5 as follows, "On June 13th, 15 wipe samples were obtained in accordance with Phase one of FCR-FS036 (see Appendix A) to determine the effectiveness of the decontamination process on the compost buildings. The floor of the North compost building and the walls and ceiling of the South compost building were sampled and analyzed for explosives. All Phase one results (included in Appendix B) were non-detect. The remaining sampling listed in FCR-FS036 will be conducted during the next reporting period." Please provide a written response to comment using Pete's original question, "It states that all decon sampling has been completed, but only seems to present data for the North and South buildings. Will the Middle building data be submitted in the next report along with the drainage ditch and groundwater sampling?" Also please provide replacement pages for the corrections, which I believe should include pages 3 & 4 and 5 & 6.

If you are too swamped by the trying to get the MFA Battery IMR out, then I can prepare the response and replacement pages. I have the electronic version of the report and I think I can handle making these changes. Please let me know what your preference is?

Thanks,
Christine

Pete,

Two things:

1. I believe I told you only the results of the first round had been received by the end of this reporting period, so that was all that was reported, but in reality, the phase 2 sampling wasn't even taken until 7/10/02.
2. Sorry to be such a bother, but is this the kind of wording you're looking for in section 3.5: "On June 13th, 15 wipe samples were obtained in accordance with Phase one of FCR-FS036 (see Appendix A) to determine the effectiveness of the decontamination process on the compost buildings. The floor of the North compost building and the walls and ceiling of the South compost building were sampled and analyzed for explosives. All Phase one results (included in Appendix B) were non-detect. The remaining sampling listed in FCR-FS036 will be conducted during the next reporting period."

Will this suffice?

Thanks,
Chris

Before I send the request to TolTest, is the additional text for explaining that the remaining data will be included in the next quarterly report your only comment?

-Chris

Thanks, Chris. Yes, perhaps some additional text would be helpful to mention that this data will be in the next report. A change page will be fine.

Thanks!

Pete

Most certainly, the data for the second round of sampling [middle building, & remaining from N (ceiling and walls) and S (floor)], trailer wipe samples, decon sump, and ditch sampling will be included in the July through September report. Only the results from the first round sampling (N floor and S- ceiling and walls) had been received by the end of June to include in the 2nd quarter report. Does a statement to that effect need to be added to the text?

-Chris

Chris,

Hope you had a good Labor Day weekend. Had a question on the latest Biofacility Quarterly Report. It states that all decon sampling has been completed, but only seems to present data for the North and South buildings. Will the Middle building data be submitted in the next report along with the drainage ditch and groundwater sampling?

Thanks!

Pete
