Peter,
Please prepare response to comments below.
Thanks,
Chris

Subject: MFB IMR RTOC

Hi Chris,

Allen & I have looked over the reponses to comments for MFB IMR and have 2 questions:

For Response to Comment 7b: We would allow up to 54 hours for transferral of soil into vials to be frozen for longer periods. Qualify all VOCs data for samples which were collected in EnCore samplers that exceeded this time frame as 'low bias.' Were any MS/MSD VOCs samples held this long? What were those recoveries? Future Crane QAPPs should specify a '< 48 hour' hold time ion the Encore at 2 degrees C, or rely on latest 2002 update to SW-846 - method 5035A.

For Response to Comment 15: We did not see the Tables that are referenced in their response. Are these the same tables that follow Response to Comment 16?

Thanks!

Pete
