SUMMARY OF TELEPHONE CONVERSATION

Client: Norfolk District COE ETI Job No.: C01395-V10

Project: Fort Story UST's Date: 1/11/95 Time: 1550

From: Dale E. Wright

To: Amy T. Webster, Telephone No.: (804) 552-1840

Company: VDEQ-TRO Location: Virginia Beach, Va.

Information Reviewed: The writer telephoned Ms. Webster concerning her request dated December 21, 1994, for sampling around the area of the removed 10,000-gallon waste oil tank at building 1081 on Fort Story. There were two major questions that were discussed:

1. Was it necessary to install a well to collect the water sample or could DPT be utilized?
2. Did she want "PCE" or "PCB's" analyzed for?

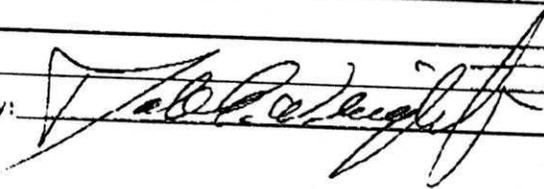

Regarding the first question, Ms. Webster stated that a water sample collected using DPT would be acceptable. There was no need to install a well.

On the second question Ms. Webster stated that she wanted PCE and PCE breakdown components due to a recent report she had received on ground water sampling at CERCLA sites on the base.

Based on Ms. Webster's responses, we intend to propose the use of the DPT rig to comply with the State's request of December 21, 1994.

Action Required: Submit Modification request for Delivery Order 10 to perform the sampling using the DPT rig.

Distribution: C. Mullican, B. Hammond
