**PART 1 - DECLARATION
DECISION DOCUMENT**

FINAL

No Action is necessary at the Auto Craft site based on the limited contamination detected, the trends which indicate that the TPH concentrations in soil and groundwater are decreasing due to numerous fate mechanisms and the results of the baseline risk assessment which did not identify receptors and potentially exposed populations.

1.5 STATUTORY DETERMINATIONS

None of the CERCLA §121 statutory determinations are necessary in this section since no remedy is being selected.

Based on the conclusions (as stated in Section 1.3 above) of the baseline risk assessment provided in the *Final Remedial Investigation Report*, dated December 2002, prepared by Malcolm Pirnie, Inc., no remedial action is necessary to ensure protection of human health and the environment. Because this No Action remedy will not result in hazardous substances, pollutants, or contaminants remaining on-site above levels that allow for unlimited use and unrestricted exposure, a five-year review will not be required.
