TECHNICAL MEMORANDUM SUMMARY OF SITE 5 VISITS ON MARCH 2002 NAB LITTLE
CREEK VA
3/18/2002
CH2MHILL

Summary of March 2002 Site Visits at NAB Little Creek Site 5

PREPARED FOR: NAB Little Creek Partnering Team

PREPARED BY: Jamie Culbreth/VBO
Stacin Martin/VBO

DATE: March 18, 2002

An initial site visit at NAB Little Creek Site 5 was performed on March 15, 2002 by CH2M HILL staff who were accompanied by the Special Boat Squadron Building Operations Manager, Mr. Ed Whirley. Monitoring well sampling at NAB Little Creek Site 5, originally scheduled for March 18, 2002, was cancelled after a site visit on March 15, 2002 revealed that monitoring wells LS05-MW02 and LS05-MW04 had either been removed and/or covered over during recent construction activities at the site. A building constructed during the late 1990s (Building 120) was found covering the area where monitoring well LS05-MW02 was located. It is unclear whether monitoring well LS05-MW04 was directly affected by the building construction, but the well location has been covered by asphalt and concrete.

LS05-MW01, located in the vicinity of MW02 and MW04, was not intended for sampling during this event. However, CH2M HILL was informed by Mr. Whirley that the removal of this particular monitoring well coincided with the new building construction. Mr. Whirley informed CH2M HILL staff that the removal of the monitoring well was documented, and NAB Little Creek PWC has records of the monitoring well removal event.

A subsequent site visit was conducted on March 21, 2002 by CH2M HILL to better identify the former location of the monitoring wells as it relates to recent site activities and to use as a basis to decide what, if any, additional samples need to be taken at the site to proceed with closing out Site 5 in the IR program. During this site visit the locations of current site structures were documented and are presented in Figure 1. Photographs of the approximate former well locations were also taken and are attached to this memorandum.
