SUBJECT: Bechtel Job No. 22567
Department of the Navy Contract No. N62467-93-D-0936
**DO#48, RESULTS FROM THE JUNE 1996 PHASE 2 SAMPLING EFFORT AT THE
DRY CLEANING FACILITY, MARINE CORPS RECRUIT DEPOT, PARRIS ISLAND, SC**
Subject Code: 7650/145

Dear Mr. Glass:

Enclosed are the results from the 12 June 1996 through 30 June 1996 Phase 2 direct push sampling effort. Figure 1, the proposed borehole locations, is submitted in order to compare with the As-Built borehole locations, Figure 2a. Figure 2b is presented with 5 clear color overlays to aid in data interpretation.

After your review, copies will be submitted to EPA Region IV, SCDHEC, and the CLEAN per your verbal direction. Please note that this is an information submittal only and an evaluation of the information is not submitted at this time.

Appendix B, Results of Methane Samples Analyzed by USGS, Columbia S.C., is blank as of this submittal. As soon as we receive the results, probably the week of August 5th, I will forward them to you for inclusion in order to have all the information assembled together.

If you should have any other questions or need additional information, please call me at (423) 220-2167.

Sincerely,

Karen S. Atchley
Project Manager

Enclosure: As stated

Bechtel Environmental, Inc.

GROUNDWATER RESULTS 18 JUNE TO 30 JUNE 1996

1.0 INTRODUCTION

An assessment of groundwater at the MCRD Parris Island, S.C., Dry Cleaner Facility was conducted by Bechtel Environmental, Inc. (BEI) between June 12 and June 30, 1996. The purpose was to confirm and further define the vertical and horizontal extent of groundwater contamination and to collect groundwater physical properties needed to aid in the selection and design of a treatment system. The assessment was based on a contamination assessment May 1994 report written under the direction of Morale, Welfare and Recreation, MCRD Parris Island, S.C.

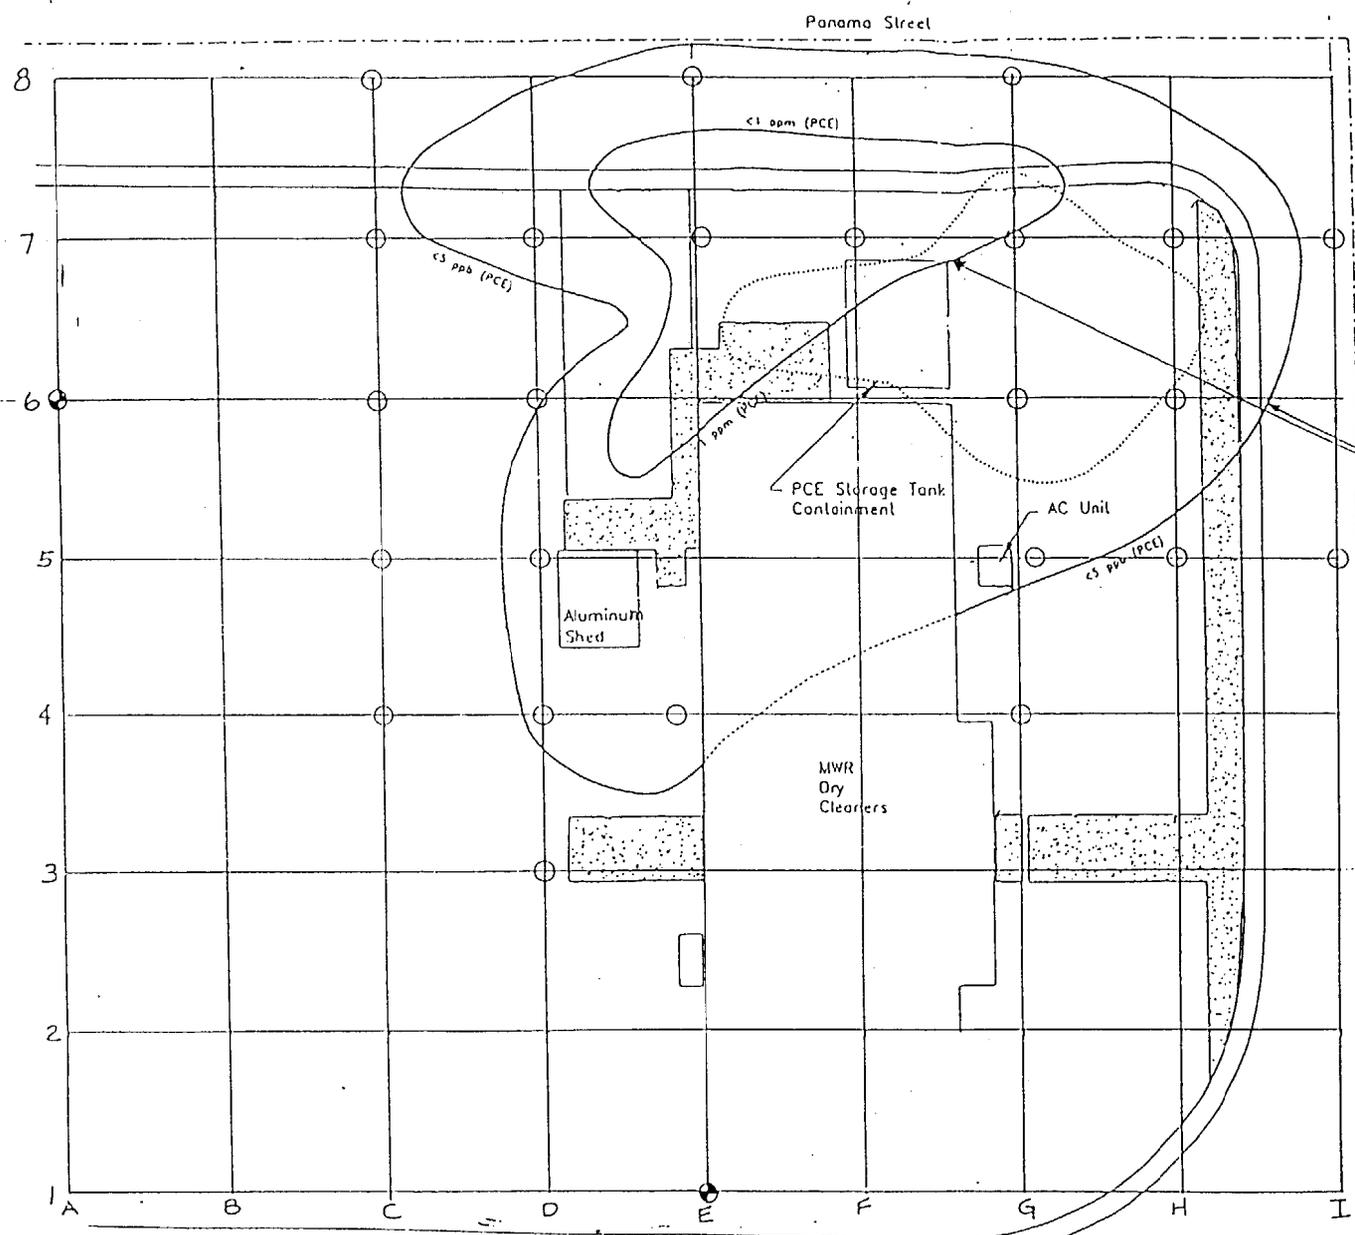

2.0 RESULTS

The basis for the proposed borehole locations, Figure 1 which was submitted with the 17 June 1996 Monitoring Well Request, was the May 1994 TCE Contamination Assessment Report. Prior to actual sampling, three cone penetrometer boreholes were drilled outside the limits of the contaminant plume, both up- and down- gradient, to locate intermediate clay lenses as well as the Hawthorn formation. After these locations were determined, water samples were collected using direct push technology at various depths in between the clay lenses and analyzed for PCE, TCE, DCE (cis- and trans-) and VC with a field GC. Table 1 gives a summary of all field GC data. Other physical properties were collected on the groundwater which are shown in Table 2. Approximately ten percent of the samples were sent to an offsite laboratory for confirmation whose results are also shown in Table 1. These results, including chain of custody forms, are in Appendix A. Appendix A also contains the information from the three samples for metals, ion analysis, total dissolved solids, total suspended solids, TKN, sulfites, BOD, ammonia, total phosphorus, total organic carbon, filtered total carbon, carbonate, hardness, and turbidity.

Figure 2a depicts the as-built groundwater sampling locations. The borehole locations varied horizontally as the GC sample results indicated the direction of the contaminant plume. Vertical groundwater samples were collected and analyzed until two clean samples were noted. Boreholes with no contamination are exhibited around the entire perimeter of the plume.

Figure 2b has 5 clear overlays which depict the total solvent plumes which exceeded the maximum contaminant limit (MCL) at the various depths. The 7' and the 14' depths have internal plumes which indicates areas >1ppm total solvents. The total solvent number was simply derived by adding the value of each contaminant collectively. No weighted measures were used.

Appendix B includes the information from the samples collected and analyzed for methane by USGS in Columbia S.C. Appendix C includes the geologic information obtained from the direct push technology. A summary table of conductivity measurements is presented before the hydrocone test information for easy reference, and Appendix D includes copies of the GC log data along with a written narrative explaining the GC/sample preparation, calibration and peak identification.

- June 1994 Plume Data
- Estimated Isoconcentration Contour (PCE)
 - PCE Tetrachloroethylene
 - ppb Parts Per Billion
 - ppm Parts Per Million
 - Estimated Location of Petroleum Solvents
 - Proposed Cone Penetrometer Borehole
 - Proposed Direct Push Borehole

Figure 1 Proposed Groundwater Sampling Locations

TABLE 1
FIELD GC SUMMARY DATA
18 JUNE TO 30 JUNE 1996
MCRD PARRIS ISLAND DRY CLEANER FACILITY

Gas Chromatograph used was HNU Model 311

-: no peak found at retention time

<: peak found less than calibration

>: actual concentration may exceed reported value

T: tentatively identified; peak not resolved

I. COMPLETENESS/COMPARABILITY

- A. Are all deliverables specified by the QC Level on the COC present? yes
 (QC level descriptions can be found in the subcontract Technical Specification)
- B. Are forms properly completed and legible? yes
- C. Were all requested analyses performed by the laboratory? yes
 (Please attach completeness report from BEIDMS)
- D. Were the requested analytical methods used for sample analysis? yes

II. TURN-AROUND TIME

Date samples submitted to lab	<u>6-20-96</u>	Date samples received by lab	<u>6-21-96</u>
Priority level specified for FAX	<u>7 day</u>	Priority level specified for hard copy	<u>15 day</u>
Due date of FAX	<u>6-28-96</u>	Due date of data transmittal	<u>7-8-96 *</u>
Date of FAX transmittal	<u>6-27-96</u>	Date of data transmittal	<u>7-5-96</u>
Was turnaround time met for FAX	<u>yes</u>	Was turnaround time met for data transmittal	<u>yes</u>
Number of days late	<u>0</u>	Number of days late	<u>0</u>

* After allowance for July 4th Holiday, 15th day falls on Sunday 7-7 so due date moved to Monday 7-8. [Signature]

III. HOLDING TIMES

EDD rec'd 7-11-96; EDD w/ wet chem in new format; no penalty
 Were all samples extracted and analyzed within specified holding times? yes

CONTRACT COMPLIANCE SCREEN AND DATA ASSESSMENT SUMMARY

IV. COMMENTS

V. DATA ASSESSMENT SUMMARY

1. VOLATILE ORGANICS BY GC/MS

1. Were samples analyzed within technical holding times?

Yes No

Comments: 6/25/96

2. Were all BFB tunes compliant?

Yes No

Comments:

3. Were all initial calibration criteria compliant (minimum RF and % RSDs)? *SPCC/CCC*

Yes No

Comments: *all SPCC/CCC RRF and RSDs acceptable. all other compounds same.*

4. Were all continuing calibration criteria compliant (minimum RF and %Ds)? *SPCC/CCC*

Yes No

Comments: *SPCC/CCC RRF & %D OK. The following compounds had %RSDs > 20%: MIBK, 2-nitro propane, tert-butylbenzene, 1,2,4-trichlorobenzene, naphthalene, 1,2,3-trichlorobenzene, dichlorodifluoromethane, chloroform, bromoform, chloroethane, trichlorofluoromethane, acrolein, carbon disulfide, isobutyl alcohol, vinyl acetate, methacrylonitrile, ethyl methacrylate, benzyl chloride, bis(2-chloroisopropyl) ether.*

CONTRACT COMPLIANCE SCREEN AND DATA ASSESSMENT SUMMARY

5. Were all surrogate recoveries compliant?

Yes No

Comments: _____

6. Were internal standards compliant?

Yes No

Comments: _____

7. Were target compounds detected in the method blank(s)?

Yes No

Comments: MeCl₂@1.4

8. Were compounds detected in the method blank also detected in associated samples at levels less than 5 times the blank concentration (for non-common lab contaminants) or less than 10 times the blank concentration (for common lab contaminants)?

Yes No N/A

Comments: P116172, 16173, AT20012

9. Were MS/MSD recoveries and RPDs within the recommended quality control limits?

Yes No N/A

Comments: _____

10. Were duplicate RPDs, for lab and/or field duplicates, within the recommended quality control limits?

Yes No N/A

Comments: _____

CONTRACT COMPLIANCE SCREEN AND DATA ASSESSMENT SUMMARY

11. Were LCS recoveries within the recommended recovery windows?

Yes No N/A

Comments: _____

Additional Comments: _____

2. ORGANICS BY GC

Analytes Evaluated: _____

1. Were samples analyzed within technical holding times?

Yes No N/A

Comments: _____

2. Were all initial calibration criteria compliant (minimum RF and % RSDs)?

Yes No

Comments: _____

3. Were all continuing calibration criteria compliant (minimum RF and %Ds)?

Yes No

Comments: _____

4. Were all surrogate recoveries compliant?

Yes No N/A

Comments: _____

CONTRACT COMPLIANCE SCREEN AND DATA ASSESSMENT SUMMARY

1. Were samples analyzed within technical holding times?

Yes No

Comments: Spt: 6/24/96 analysis - 6/25/96

2. Were all initial calibration criteria compliant?

Yes No

3. Were all continuing calibration verification criteria compliant:

Yes No

Comments: Per C&A recoveries for: Mg, Na

4. Were target compounds detected in the method blank(S) at levels greater than the IDL?

Yes No

Comments: Fe@ 4.72 ; Mg@ 18.31 ; K@ 219.05

CONTRACT COMPLIANCE SCREEN AND DATA ASSESSMENT SUMMARY

5. Were compounds detected in the method blank also detected in associated samples at levels less than 5 times the blank concentration?

Yes No N/A

Comments: _____

6. Were MS/MSD recoveries and duplicate RPD's within the recommended quality control limits?

Yes No

Comments: using 4x rule.

7. Were duplicate RPDs, for lab and/or field duplicates, within the recommended quality control limits?

Yes No N/A

Comments: _____

8. Were LCS recoveries within the recommended recovery windows?

Yes No

Comments: _____

Additional Comments: LCS AB recoveries acceptable. Serial dilution results acceptable.

6. CYANIDE AND MISCELLANEOUS WET CHEMISTRY ANALYSES

Analyses Evaluated:

BOVS	Fluoride	Orthophosphorus	Dis. Org. Carbon
Alkalinity	Nitrite	Sulfate	TOC
Hardness	Nitrate	Total Hardness	Ammonia
Bromide	Sulfate	TDS	Tl plus.
Chloride		TSS	TKN

1. Was sample prepared and/or analyzed within technical holding times?

Yes No

Comments: PI 16171 - HT violation for: BOVS, O-PO4, NO2, NO3 (received late)
PI 16172 - received on time - lab out for NO2, NO3

CONTRACT COMPLIANCE SCREEN AND DATA ASSESSMENT SUMMARY

2. Were initial calibration criteria compliant?

Yes

No

N/A

Comments: _____

3. Were continuing calibration criteria compliant?

Yes

No

N/A

Comments: _____

4. Were all surrogate recoveries compliant?

Yes

No

N/A

Comments: _____

5. Were target compounds detected in the method blank(s)?

Yes

No

Comments: _____

6. Were compounds detected in the method blank also detected in associated sample(s) at a concentration less than 5 times the blank concentration?

Yes

No

N/A

Comments: _____

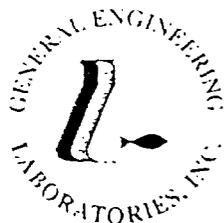

7. Were MS/MSD recoveries and RPD's within the recommended quality control limits?

Yes

No

N/A

Comments: _____

Notes:

The qualifiers in this report are defined as follows:

J indicates presence of analyte between DL (Detect Limit) and RL (Report Limit)

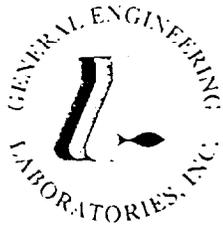

U indicates that the analyte was not detected at a concentration greater than the detection limit.

* indicate that a quality control analyte recovery is outside of specified acceptance criteria.

CONTRACT COMPLIANCE SCREEN AND DATA ASSESSMENT SUMMARY

FACILITY ID: Parris Island
 DELIVERY ORDER: 048
 SITE ID: MWR Dry Cleaners Phase II Sampling
 SEIR ID: PI.008
 COC #: PI028
 DATE: 7-12-96
 REVIEWER: Wayne E. Tewary
 LABORATORY: GEL2
 SUPPLIER DOCUMENT NO. 145-0001-0213-2-1
 MATRIX: Groundwater
 SAMPLE ID's: PI16174 + PI16175

DATE(S) OF SAMPLE COLLECTION: _____
 CHARGE NUMBER: 22567-145-139918
 NUMBER OF HOURS CHARGED TO REVIEW DATA PACKAGE: 2
 LEVEL OF REVIEW: C D _____ Other _____

PARAMETERS: VOC BNA _____ PEST/PCB _____ MERCURY _____ METALS
 CN _____ TPH _____ SULFIDE TOX TSS/TDS GEOTECH _____ RAD _____
 OTHER

I. COMPLETENESS/COMPARABILITY

- A. Are all deliverables specified by the QC Level on the COC present? yes
 (QC level descriptions can be found in the subcontract Technical Specification)
- B. Are forms properly completed and legible? yes
- C. Were all requested analyses performed by the laboratory? Yes
 (Please attach completeness report from BEIDMS)
- D. Were the requested analytical methods used for sample analysis? Yes

II. TURN-AROUND TIME

Date samples submitted to lab	<u>6-25-96</u>	Date samples received by lab	<u>6-26-96</u>
Priority level specified for FAX	<u>7 day</u>	Priority level specified for hard copy	<u>15 day</u>
Due date of FAX	<u>7-3-96</u>	Due date of data transmittal	<u>7-12-96</u> *
Date of FAX transmittal	<u>7-3-96</u>	Date of data transmittal	<u>7-11-96</u>
Was turnaround time met for FAX	<u>yes</u>	Was turnaround time met for data transmittal	<u>yes</u>
Number of days late	<u>0</u>	Number of days late	<u>0</u>

* Allows for July 4th holiday.

III. HOLDING TIMES

Were all samples extracted and analyzed within specified holding times? Yes

CONTRACT COMPLIANCE SCREEN AND DATA ASSESSMENT SUMMARY

IV. COMMENTS

The samples were received at 10°C, therefore the VDA compounds (gases) that would be most affected will be conservatively J/UJ qualified

V. DATA ASSESSMENT SUMMARY

1. VOLATILE ORGANICS BY GC/MS

1. Were samples analyzed within technical holding times?

Yes No

Comments: _____

2. Were all BFB tunes compliant?

Yes No

Comments: _____

3. Were all initial calibration criteria compliant (minimum RF and % RSDs)?

Yes No

Comments: The RSD's for target compounds were within QC limits.

4. Were all continuing calibration criteria compliant (minimum RF and %Ds)?

Yes No

Comments: The % D's of chloromethane, bromomethane and vinyl acetate were outside QC limits, therefore associated results will be J/UJ qualified.

CONTRACT COMPLIANCE SCREEN AND DATA ASSESSMENT SUMMARY

5. Were all surrogate recoveries compliant?

Yes No

Comments: _____

6. Were internal standards compliant?

Yes No

Comments: _____

7. Were target compounds detected in the method blank(s)?

Yes No

Comments: Methylene chloride was detected in the
method blank at 0.7 mg/L.

8. Were compounds detected in the method blank also detected in associated samples at levels less than 5 times the blank concentration (for non-common lab contaminants) or less than 10 times the blank concentration (for common lab contaminants)?

Yes No N/A

Comments: _____

9. Were MS/MSD recoveries and RPDs within the recommended quality control limits?

Yes No N/A

Comments: _____

10. Were duplicate RPDs, for lab and/or field duplicates, within the recommended quality control limits?

Yes No N/A

Comments: _____

CONTRACT COMPLIANCE SCREEN AND DATA ASSESSMENT SUMMARY

11. Were LCS recoveries within the recommended recovery windows?

Yes

No

N/A

Comments: The LCS recoveries of chloromethane, bromomethane and vinyl acetate were outside method GC limits, therefore associated results will be J/WJ qualified.

Additional Comments: _____

2. ORGANICS BY GC

Analytes Evaluated: _____

1. Were samples analyzed within technical holding times?

Yes

No

N/A

Comments: _____

2. Were all initial calibration criteria compliant (minimum RF and % RSDs)?

Yes

No

Comments: _____

3. Were all continuing calibration criteria compliant (minimum RF and %Ds)?

Yes

No

Comments: _____

4. Were all surrogate recoveries compliant?

Yes

No

N/A

Comments: _____

CONTRACT COMPLIANCE SCREEN AND DATA ASSESSMENT SUMMARY

5. Were internal standards compliant?

Yes No N/A

Comments: _____

6. Were target compounds detected in the method blank(s)?

Yes No

Comments: _____

7. Were compounds detected in the method blank also detected in associated samples at levels less than 5 times the blank concentration (for non-common lab contaminants) or less than 10 times the blank concentration (for common lab contaminants)?

Yes No N/A

Comments: _____

8. Were MS/MSD recoveries and RPDs within the recommended quality control limits?

Yes No N/A

Comments: _____

9. Were duplicate RPDs, for lab and/or field duplicates, within the recommended quality control limits?

Yes No N/A

Comments: _____

10. Were LCS recoveries within the recommended recovery windows?

Yes No N/A

Comments: _____

Additional Comments: _____

CONTRACT COMPLIANCE SCREEN AND DATA ASSESSMENT SUMMARY

3. SEMIVOLATILES BY GC/MS

1. Were samples extracted and/or analyzed within technical holding times?

Yes No

Comments: _____

2. Were all DFTPP tunes compliant?

Yes No N/A

Comments: _____

3. Were all initial calibration criteria compliant (minimum RF and % RSDs)?

Yes No

Comments: _____

4. Were all continuing calibration criteria compliant (minimum RF and %Ds)?

Yes No

Comments: _____

5. Were all surrogate recoveries compliant?

Yes No

Comments: _____

6. Were internal standards compliant?

Yes No

Comments: _____

CONTRACT COMPLIANCE SCREEN AND DATA ASSESSMENT SUMMARY

7. Were target compounds detected in the method blank(s)?

Yes No

Comments: _____

8. Were compounds detected in the method blank also detected in associated samples at levels less than 5 times the blank concentration (for non-common lab contaminants) or less than 10 times the blank concentration (for common lab contaminants)?

Yes No N/A

Comments: _____

9. Were MS/MSD recoveries and RPDs within the recommended quality control limits?

Yes No

Comments: _____

10. Were duplicate RPDs, for lab and/or field duplicates, within the recommended quality control limits?

Yes No N/A

Comments: _____

11. Were LCS recoveries within the recommended recovery windows?

Yes No N/A

Comments: _____

Additional Comments: _____

4. PEST/PCB'S BY GC

1. Were samples extracted and/or analyzed within technical holding times?

Yes No

CONTRACT COMPLIANCE SCREEN AND DATA ASSESSMENT SUMMARY

Comments: _____

2. Were all initial calibration criteria compliant (minimum RF and % RSDs)?

Yes No

Comments: _____

3. Were all continuing calibration criteria compliant (minimum RF and %Ds)?

Yes No

Comments: _____

4. Were all surrogate recoveries compliant?

Yes No

Comments: _____

5. Were target compounds detected in the method blank(s)?

Yes No

Comments: _____

6. Were compounds detected in the method blank also detected in the associated sample at levels less than 5 times the blank concentration?

Yes No N/A

Comments: _____

7. Were MS/MSD recoveries and RPD's within the recommended quality control limits?

Yes No

Comments: _____

CONTRACT COMPLIANCE SCREEN AND DATA ASSESSMENT SUMMARY

8. Were duplicate RPDs, for lab and/or field duplicates, within the recommended quality control limits?

Yes No N/A

Comments: _____

9. Were LCS recoveries within the recommended recovery windows?

Yes No N/A

Comments: _____

Additional Comments: _____

5. METALS AND MERCURY

1. Were samples analyzed within technical holding times?

Yes No

Comments: _____

2. Were all initial calibration criteria compliant?

Yes No

3. Were all continuing calibration verification criteria compliant:

Yes No

Comments: _____

4. Were target compounds detected in the method blank(S) at levels greater than the IDL?

Yes No

Comments: _____

CONTRACT COMPLIANCE SCREEN AND DATA ASSESSMENT SUMMARY

5. Were compounds detected in the method blank also detected in associated samples at levels less than 5 times the blank concentration?

Yes No N/A

Comments: _____

6. Were MS/MSD recoveries and duplicate RPD's within the recommended quality control limits?

Yes No

Comments: _____

7. Were duplicate RPDs, for lab and/or field duplicates, within the recommended quality control limits?

Yes No N/A

Comments: _____

8. Were LCS recoveries within the recommended recovery windows?

Yes No

Comments: _____

Additional Comments: The initial and final CRDL recoveries of Mg and Na were outside QC limits, however no action was taken

6. CYANIDE AND MISCELLANEOUS WET CHEMISTRY ANALYSES

Analyses Evaluated:

<u>BOD</u>	<u>Carbonates</u>	<u>DOC/TOC</u>
<u>Hardness</u>	<u>NH₃</u>	<u>Phosphorus (D-and total)</u>
<u>Sulfate/sulfite</u>	<u>TDS/TSS</u>	<u>TKN</u>
<u>Turbidity</u>	<u>Ions</u>	

1. Was sample prepared and/or analyzed within technical holding times?

Yes No

Comments: _____

CONTRACT COMPLIANCE SCREEN AND DATA ASSESSMENT SUMMARY

Notes:

The qualifiers in this report are defined as follows:

J indicates presence of analyte between DL (Detect Limit) and RL (Report Limit)

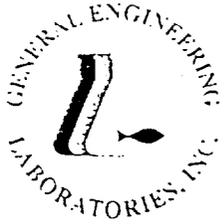

U indicates that the analyte was not detected at a concentration greater than the detection limit.

* indicate that a quality control analyte recovery is outside of specified acceptance criteria.

I. COMPLETENESS/COMPARABILITY

- A. Are all deliverables specified by the QC Level on the COC present? _____
 (QC level descriptions can be found in the subcontract Technical Specification)
- B. Are forms properly completed and legible? _____
- C. Were all requested analyses performed by the laboratory? _____
 (Please attach completeness report from BEIDMS)
- D. Were the requested analytical methods used for sample analysis? _____

II. TURN-AROUND TIME

Date samples submitted to lab	<u>6-28-96</u>	Date samples received by lab	<u>7-1-96</u>
Priority level specified for FAX	<u>7 day</u>	Priority level specified for hard copy	<u>15 day</u>
Due date of FAX	<u>7-9-96</u>	Due date of data transmittal	<u>7-19-96 *</u>
Date of FAX transmittal	<u>7-2-96</u>	Date of data transmittal	<u>7-5-96</u>
Was turnaround time met for FAX	<u>yes</u>	Was turnaround time met for data transmittal	<u>yes</u>
Number of days late	<u>0</u>	Number of days late	<u>0</u>

allows for July 4th holiday

III. HOLDING TIMES

Were all samples extracted and analyzed within specified holding times? yes

CONTRACT COMPLIANCE SCREEN AND DATA ASSESSMENT SUMMARY

IV. COMMENTS

V. DATA ASSESSMENT SUMMARY

1. VOLATILE ORGANICS BY GC/MS

1. Were samples analyzed within technical holding times?

Yes No

Comments: 7/1/96

2. Were all BFB tunes compliant?

Yes No

Comments: _____

3. Were all initial calibration criteria compliant (minimum RF and % RSDs)?

Yes No ^{RSD}

Comments: All compounds RRF < 300 and RRF > 0.1.

4. Were all continuing calibration criteria compliant (minimum RF and %Ds)?

Yes No

Comments: All SPCC/CCC RF and %D acceptable. Other compounds outside 2000 include: trichlorofluoromethane, acrolein, acetonitrile, nitrobenzene, pentachloroethane, dichlorodifluoromethane, chloroform, bromoethane, allyl chloride, vinyl acetate

CONTRACT COMPLIANCE SCREEN AND DATA ASSESSMENT SUMMARY

5. Were all surrogate recoveries compliant?

Yes No

Comments: _____

6. Were internal standards compliant?

Yes No

Comments: _____

7. Were target compounds detected in the method blank(s)?

Yes No

Comments: VBK 01 (7/1/96) Reel @ 0.7

8. Were compounds detected in the method blank also detected in associated samples at levels less than 5 times the blank concentration (for non-common lab contaminants) or less than 10 times the blank concentration (for common lab contaminants)?

Yes No N/A

Comments: P11676, 16178, 16179

9. Were MS/MSD recoveries and RPDs within the recommended quality control limits?

Yes No N/A

Comments: _____

10. Were duplicate RPDs, for lab and/or field duplicates, within the recommended quality control limits?

Yes No N/A

Comments: _____

APPENDIX B
RESULTS OF METHANE SAMPLES ANALYZED BY USGS
COLUMBIA, S.C.

United States Department of the Interior

U.S. GEOLOGICAL SURVEY

Water Resources Division
720 Gracern Road - Suite 129
Columbia, SC 29210-7651

Karen Atchley
Bechtel Environmental, Inc.
151 Lafayette Dr.
Oak Ridge, TN 37831-0350

August 20, 1996

Dear Ms. Atchley:

Please find enclosed results for dissolved inorganic carbon (DIC) and methane (CH_4) for the wells you sampled at the Parris Island dry cleaners site.

There is quite a range in DIC concentrations; I gather that sample PI-161711 is the background well, and the others are contaminated (> 200 mg/L DIC is a large number). These elevated DIC numbers can indicate significant mineralization of hydrocarbons if most of the DIC is from CO_2 generated by such a process. For methane, 0.1 to 1.2 mg/L is not high, but does indicate some methanogenesis has occurred in those wells.

Thanks for your patience while these samples were being analyzed.

Sincerely,

James E. Landmeyer, Ph.D.

DIC and METHANE concentrations at Parris Island Site.

June 19-20, 1996

NA = NOT ANALYZED; ND = BELOW DETECTION LIMIT OF 0.01 mg/L OR 1 µM.

PARRIS ISLAND MWR DRY CLEANER

GC Field VOA analysis

Analysis of VOAs from the groundwater at the Parris Island MCRD Dry Cleaner Facility was performed using a HNU 311 portable gas chromatograph (GC) equipped with a 11.7 eV photo ionization detector (PID). The GC along with required supporting equipment was set up in a climate controlled office provided by the ROICC. A summary of the process is outlined below.

EQUIPMENT PREPARATION

Prior to using the GC for analysis, the following checks were performed. A new septa was installed in the injector port. This is done the previous night to allow for the septa to condition. The column head pressure was checked by means of the head pressure gage on the HNU, it read 8 psi for the MXT 502.2 capillary column being used for this analysis which is correct. The helium flow that exits the carbon trap was checked for a flow rate of 10 ml/min. All heat zones were checked, injector and detector were set to 100°C and the column oven was set to 60°C (when using the 11.7 eV PID do not exceed 125°C) to reach equilibrium. The retention time (Rt) windows were set from the Rt study for all compounds of interest. Base line was checked for stability. Printer paper was installed along with the printer pen. This check was performed daily at a minimum, and any time a confirmation of an analytical result was felt necessary.

INDIVIDUAL SOLVENT PEAK IDENTIFICATION

Retention times (Rt's) of individual known solvent compounds were used as a baseline to identify each groundwater sample peak. These Rt's were determined by injecting a fixed amount of a known compound into 20 ml of ultra pure water contained in a 40 ml VOA vial. The vial was capped and shaken for one minute. The VOA vial was then placed into a water bath set to 35°C for 30 minutes to establish equilibrium between the head space and liquid phase. After the 30 minute equilibrium time was completed, a 1 ml head space sample was taken from the VOA vial and injected into the HNU GC. The Rt of the compound was then recorded. This procedure was repeated for all compounds of interest and fluorobenzene (surrogate). The Rt study was repeated once more on the next day. After the Rts were established for all compounds, a mixture containing the five compounds of interest and fluorobenzene were injected into the GC. This was for the purpose of identifying any problems with peaks co-eluting; all peaks were completely resolved, except for vinyl chloride.

Note: The data gathered for vinyl chloride should be treated as tentative identification only. Vinyl chloride (VC) is not very compatible to isothermal (single temperature) analysis with compounds that are higher boiling like tetrachloroethylene (PCE).

The VC volatility rate is near methanol's (the standard) volatility rate, thus making them difficult to differentiate.

CALIBRATION STANDARDS

A Chem Service 100 µg/ml Mix 5 (CS159319) made up in methanol lot number 165-64B was used as the parent standard to make up the 10 µg/l daily standard mixture (Mix 5) in organic free water. This daily standard was used to calibrate the HNU 311 GC prior to any sample analysis. The daily calibration standard contained the following compounds at the concentrations listed below when used at a 1/1 ratio of headspace to liquid volume:

Vinyl chloride	10 µg/l
Trans-1,2-Dichloroethylene (DCE)	10 µg/l
Cis-1,2-Dichloroethylene (DCE)	10 µg/l
Trichloroethylene (TCE)	10 µg/l
Tetrachloroethylene (PCE)	10 µg/l

A twenty (20) ml aliquot of organic free water was slowly added to a properly labeled 40 ml VOA vial by means of a calibrated pipet gun, followed by 2 µl of the 100 µg/ml parent standard and 1 µl of the 200 µg/ml fluorobenzene surrogate. The 40 ml VOA vial was then capped and shaken for one minute. After shaking the vial for one minute, the vial was placed cap side down into a water bath which had been set to 35°C. The standard remained in the 35°C water bath for thirty (30) minutes to allow the headspace to reach equilibrium. A 1 ml headspace sample was taken from the standard vial by means of a 1 ml gas tight syringe and injected into the GC. After the analysis was complete, the retention times of the chromatograph was compared with that of the RT window study to identify peaks of interest. With the area counts and concentrations of all peaks known, it was possible to assign response factors to the calibration standard.

SURROGATE FUNCTION

The surrogate's primary function is to confirm retention time, sample aliquoting, and injection consistency. Fluorobenzene was used as a surrogate, which was added to all standards, blanks, and samples at a concentration of 10 µg/l, unless otherwise noted. The percent recovery (%R) for all surrogates was calculated and reported. The fluorobenzene surrogate was not used for the purpose of correcting reported values.

MATRIX SPIKE

A matrix spike (MS) is used to identify matrix interferences which can effect the recovery of a given compound. The MS contained the following compounds at the concentrations listed below when used at a 1/1 ratio of headspace to liquid volume:

Vinyl chloride	10 µg/l
Trans-1,2-Dichloroethylene (DCE)	10 µg/l
Cis-1,2-Dichloroethylene (DCE)	10 µg/l
Trichloroethylene (TCE)	10 µg/l
Tetrachloroethylene (PCE)	10 µg/l

An MS was preformed on designated samples, and their recoveries were calculated and reported.

SAMPLE PREPARATION

A VOA sample in a labeled 40 ml vial with no headspace packed in ice to chill to 4°C was received by the field lab. The sample was split into two equal parts to give a 1/1 ratio of headspace and liquid sample. A twenty (20) ml aliquot of sample was slowly added to a properly labeled 40 ml VOA vial by means of a calibrated pipet gun, followed by 1µl of the 200µg/ml fluorobenzene surrogate. The 40 ml VOA vial was then capped and shaken for one minute. After shaken, the vial was placed cap side down into a water bath which had been set to 35°C. The sample remained in the 35°C water bath for thirty (30) minutes to allow the headspace to reach equilibrium. A 1 ml headspace sample was taken from the sample vial by means of a 1 ml gas tight syringe and injected into the GC. By comparing the area of an unknown peak (compound) having a given retention time with the response factors of known standards having the same retention time, it was possible to calculate the concentration of the unknown peak (compound).

SAMPLE DILUTIONS

Samples that had compounds which exceeded the calibration limits were diluted. A 10X dilutions was made by injecting into the GC a 100 µl headspace taken from a sample vial that was properly prepped at equilibrium. A 100X dilutions was made by injecting into the GC a 10 µl headspace taken from a sample vial that was properly prepped at equilibrium. Some samples had data reported from two analysis. This was due to a dilution requirement for part of the compounds found. Compound concentrations are always reported on the undiluted sample when dilutions are not required, unless the diluted value appears to be more accurate based on chromatograph and integrator interpretation.

SAMPLE ANALYTICAL RESULTS

The GC provided analytical data in the form of a chromatograph which included the Rt and area for all peaks. This data was compared to the calibration standard to identify the peaks for the compounds of interest. The area and concentration of the calibration standard was used to establish a mathematical ratio (response factor) which was used to calculate the concentration of each compound of interest in each sample. Retention time drift and instrument stability was monitored by means of a surrogate (fluorobenzene) added to each sample.

< (Sign only with no numerical value) indicates small peak found at assigned compound retention time but was not integrated by instrument.

> Indicates actual concentration of compound may exceed reported value.

T Tentative identification of vinyl chloride, area of peak represents co-elution with methanol and unknown compound(s). Therefore, identification and/or concentration of the vinyl chloride compound is not definable.

PCE (Tetrachloroethylene)		—	

SAMPLE TEMP: 35 °C VOL. INJ.: 1 µL
 SAMPLE MATRIX: SOIL WATER

GC SAMPLING METHOD: VOA HEAD SPACE *

DILUTION FACTOR: 1X

DATE SAMPLED: N/A

DATE ANALYZED: 6/19/96

CAL. STD.: un Calibrated RT Study

NOTES:

* A 40 ML VOA vial containing 20 ML of sample, standard, or blank and a 20 ML headspace was heated to 35°C in a waterbath for 30 minutes. A 1 ML headspace sample was withdrawn from the vial and injected into the GC. 7/27/96 JAJ

§ Surrogate concentration at 10 µg/l.

Matrix spike concentration at 10 µg/l.

- Dash for compound concentration indicates no peak found at assigned retention time.

< Less than sign only for compound concentration indicates small peak found at assigned retention time but not integrated.

> Greater than sign before a numerical value indicates actual concentration of compound may exceed reported value.

T Tentative identification of vinyl chloride, area of peak represents co-elution with methanol and unknown compound(s). Therefore, identification and/or concentration of the vinyl chloride compound is not definable.

SAMPLE TEMP: 35 °C VOL. INJ: 1ML
 SAMPLE MATRIX: SOIL WATER

GC SAMPLING METHOD: VOA HEAD SPACE

DILUTION FACTOR: 1X

DATE SAMPLED: 6/20/96

DATE ANALYZED: 6/20/96

CAL. STD.: un calibrated

NOTES:
 * A 40 ML VOA vial containing 20 ML of sample, standard, or blank and a 20 ML headspace was heated to 35°C in a waterbath for 30 minutes. 1 ML headspace sample was withdrawn from the vial and injected into the GC.
 § Surrogate concentration at 10 µg/l,
 Matrix spike concentration at 10 µg/l.
 - Indicates no peak found at assigned retention time for the compound.
 < (Sign only with no numerical value) indicates small peak found at assigned compound retention time but was not integrated by instrument.
 > Indicates actual concentration of compound may exceed reported value.
 T Tentative identification of vinyl chloride, area of peak represents co-elution with methanol and unknown compound(s). Therefore, identification and/or concentration of the vinyl chloride compound is not definable.

Matrix spike concentration at 10 µg/l.

- Indicates no peak found at assigned retention time for the compound.

< (Sign only with no numerical value) indicates small peak found at assigned compound retention time but was not integrated by instrument.

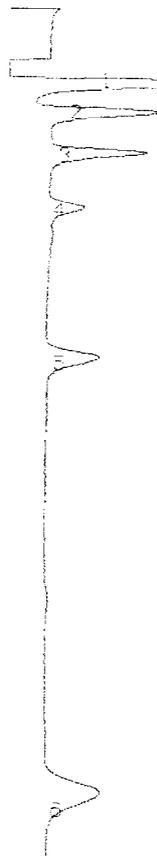

> Indicates actual concentration of compound may exceed reported value.

T Tentative identification of vinyl chloride, area of peak represents co-elution with methanol and unknown compound(s). Therefore, identification and/or concentration of the vinyl chloride compound is not definable.

CAL. STD.: #16 6/20/96

NOTES:

* A 40 ML VOA vial containing 20 ML of sample, standard, or blank and a 20 ML headspace was heated to 35°C in a waterbath for 30 minutes. A 1 ML headspace sample was withdrawn from the vial and injected into the GC.

§ Surrogate concentration at 10 µg/l,

Matrix spike concentration at 10 µg/l.

- Indicates no peak found at assigned retention time for the compound.

< (Sign only with no numerical value) indicates small peak found at assigned compound retention time but was not integrated by instrument.

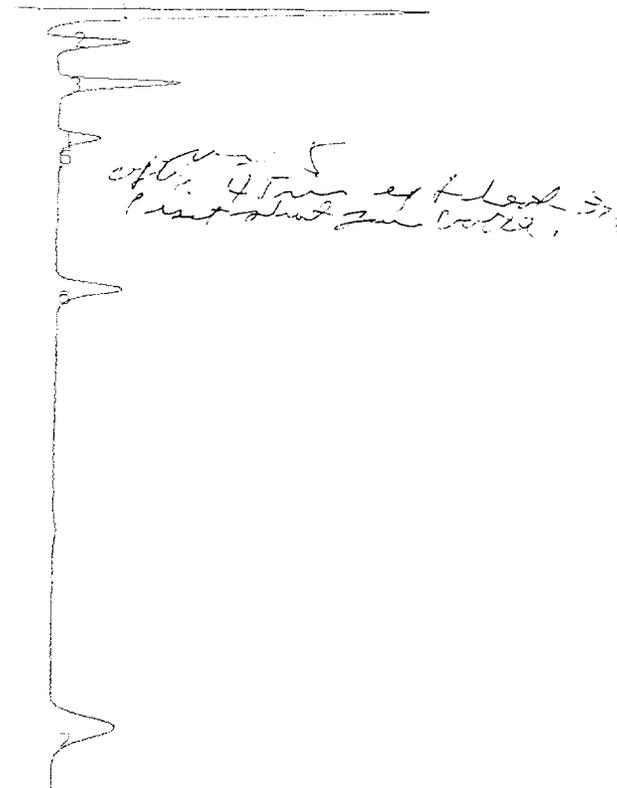

> Indicates actual concentration of compound may exceed reported value.

T Tentative identification of vinyl chloride, area of peak represents co-elution with methanol and unknown compound(s). Therefore, identification and/or concentration of the vinyl chloride compound is not definable.

TCE <small>(Trichloroethylene)</small>		—	
PCE <small>(Tetrachloroethylene)</small>		—	

SAMPLE TEMP: 35 °C VOL. INJ: 1ml
 SAMPLE MATRIX: SOIL WATER

GC SAMPLING METHOD: VOA HEAD SPACE

DILUTION FACTOR: 1X

DATE SAMPLED: N/A

DATE ANALYZED: 6/21/96

CAL. STD.: #6 6/21/96

NOTES:

* A 40 ML VOA vial containing 20 ML of sample, standard, or blank and a 20 ML headspace was heated to 35°C in a waterbath for 30 minutes. 1 ML headspace sample was withdrawn from the vial and injected into the GC.

§ Surrogate concentration at 10 µg/l.

Matrix spike concentration at 10 µg/l.

- Indicates no peak found at assigned retention time for the compound.

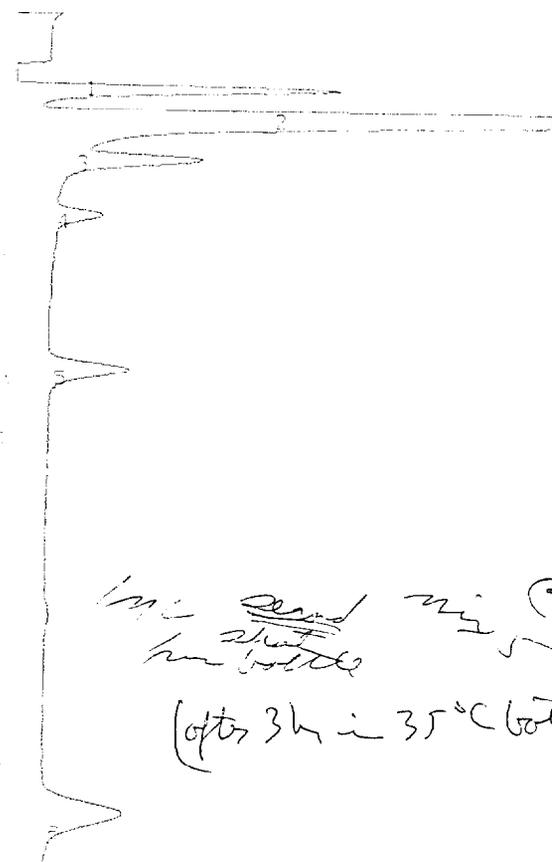

< (Sign only with no numerical value) indicates small peak found at assigned compound retention time but was not integrated by instrument.

> Indicates actual concentration of compound may exceed reported value.

T Tentative identification of vinyl chloride, area of peak represents co-elution with methanol and unknown compound(s). Therefore, identification and/or concentration of the vinyl chloride compound is not definable.

SAMPLE TEMP: 35 °C VOL. INJ: 1ML
 SAMPLE MATRIX: SOIL WATER

GC SAMPLING METHOD: VOA HEAD SPACE
 DILUTION FACTOR: 1X
 DATE SAMPLED: N/A
 DATE ANALYZED: 6/21/96
 CAL. STD.: N/A

NOTES:
 * A 40 Ml VOA vial containing 20 Ml of sample, standard, or blank and a 20 Ml headspace was heated to 35°C in a waterbath for 30 minutes. A 1 Ml headspace sample was withdrawn from the vial and injected into the GC.

§ Surrogate concentration at 10 µg/l,
 Matrix spike concentration at 10 µg/l.
 - Indicates no peak found at assigned retention time for the compound.

< (Sign only with no numerical value) indicates small peak found at assigned compound retention time but was not integrated by instrument.

> Indicates actual concentration of compound may exceed reported value.

T Tentative identification of vinyl chloride, area of peak represents co-elution with methanol and unknown compound(s). Therefore, identification and/or concentration of the vinyl chloride compound is not definable.

CAL. STD.: # 25 6/21/96

NOTES:

* A 40 ML VOA vial containing 20 ML of sample, standard, or blank and a 20 ML headspace was heated to 35°C in a waterbath for 30 minutes. A 1 ML headspace sample was withdrawn from the vial and injected into the GC.

§ Surrogate concentration at 10 µg/l,

Matrix spike concentration at 10 µg/l.

- Indicates no peak found at assigned retention time for the compound.

< (Sign only with no numerical value) indicates small peak found at assigned compound retention time but was not integrated by instrument.

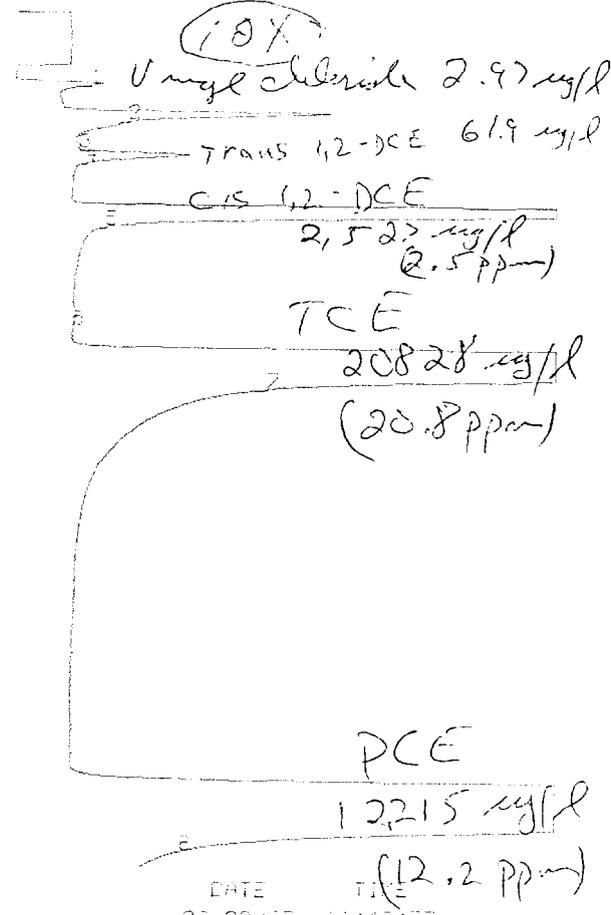

> Indicates actual concentration of compound may exceed reported value.

T Tentative identification of vinyl chloride, area of peak represents co-elution with methanol and unknown compound(s). Therefore, identification and/or concentration of the vinyl chloride compound is not definable.

SAMPLE TEMP: 35 °C VOL. INJ: 1ML
 SAMPLE MATRIX: SOIL WATER

GC SAMPLING METHOD: VOA HEAD SPACE *

DILUTION FACTOR: 1X

DATE SAMPLED: 1/1

DATE ANALYZED: 6/24/96

CAL. STD.: un calibrated

NOTES:

* A 40 ml VOA vial containing 20 ml of sample, standard, or blank and a 20 ml headspace was heated to 35°C in a waterbath for 30 minutes. A 1 ml headspace sample was withdrawn from the vial and injected into the GC.

§ Surrogate concentration at 10 µg/l,

Matrix spike concentration at 10 µg/l.

- Dash for compound concentration indicates no peak found at assigned retention time.

< Less than sign only for compound concentration indicates small peak found at assigned retention time but not integrated.

> Greater than sign before a numerical value indicates actual concentration of compound may exceed reported value.

T Tentative identification of vinyl chloride, area of peak represents co-elution with methanol and unknown compound(s). Therefore, identification and/or concentration of the vinyl chloride compound is not definable.

TCE (Trichloroethylene)		1.47	
PCE (Tetrachloroethylene)		—	

SAMPLE TEMP: 35 °C VOL. INJ: 1 µL
 SAMPLE MATRIX: SOIL WATER

GC SAMPLING METHOD: VOA HEAD SPACE *

DILUTION FACTOR: 1X

DATE SAMPLED: 6/24/96

DATE ANALYZED: 6/24/96

CAL. STD.: #21 6/24/96

NOTES:
 * A 40 ML VOA vial containing 20 ML of sample, standard, or blank and a 20 ML headspace was heated to 35°C in a waterbath for 30 minutes. A 1 ML headspace sample was withdrawn from the vial and injected into the GC. 0 7/27/96 JDD

§ Surrogate concentration at 10 µg/l,
 Matrix spike concentration at 10 µg/l.

- Dash for compound concentration indicates no peak found at assigned retention time.

< Less than sign only for compound concentration indicates small peak found at assigned retention time but not integrated.

> Greater than sign before a numerical value indicates actual concentration of compound may exceed reported value.

T Tentative identification of vinyl chloride, area of peak represents co-elution with methanol and unknown compound(s). Therefore, identification and/or concentration of the vinyl chloride compound is not definable.

GC SAMPLING METHOD: VOA HEAD SPACE *

DILUTION FACTOR: 1X

DATE SAMPLED: 6/24/96

DATE ANALYZED: 6/24/96

CAL. STD.: #21 6/24/96

NOTES:
* A 40 ml VOA vial containing 20 ml of sample, standard, or blank and a 20 ml headspace was heated to 35°C in a waterbath for 30 minutes. A 1 ml headspace sample was withdrawn from the vial and injected into the GC.

§ Surrogate concentration at 10 µg/l,
Matrix spike concentration at 10 µg/l.

- Dash for compound concentration indicates no peak found at assigned retention time.

< Less than sign only for compound concentration indicates small peak found at assigned retention time but not integrated.

> Greater than sign before a numerical value indicates actual concentration of compound may exceed reported value.

I Tentative identification of vinyl chloride, area of peak represents co-elution with methanol and unknown compound(s). Therefore, identification and/or concentration of the vinyl chloride compound is not definable.

Contract No.: N62467-93-D-0936
 Job Name: MWR CLEANERS, Bldg. 193
 Job #: 22567-145
 Delivery order No.: 48

INSTRUMENT: HNU 311 Portable Gas Chromatograph

Analysis head Pressure: 8 PSI

Oven Temperature: 60 °C

INJ./DET. TEMP.: 100 °C

ANALYSIS TIME: 12 MIN.

COLUMN TYPE: MXT-502.2

SOURCE TYPE: 11.7 eV PID

*** SAMPLE ID.
Mix # 5 @ 10 μ g/l

COMPOUND NAME	PPM Mg/l	PPB μ g/l	QC %R
Vinyl Chloride		10T	
Trans. 1,2-DCE (trans-1,2-Dichloroethylene)		10	
Cis. 1,2-DCE (Cis-1,2-Dichloroethylene)		10	
Fluorobenzene surrogate §		10	
TCE (Trichloroethylene)		10	
PCE (Tetrachloroethylene)		10	

SAMPLE TEMP: 35 °C VOL. INJ: 1ML
 SAMPLE MATRIX: SOIL WATER

GC SAMPLING METHOD: VOA HEAD SPACE

DILUTION FACTOR: 1X

DATE SAMPLED: N/A

DATE ANALYZED: 6/25/96

CAL. STD.: #14 6/25/96

NOTES:

* A 40 ML VOA vial containing 20 ML of sample, standard, or blank and a 20 ML headspace was heated to 35°C in a waterbath for 30 minutes. A 1 ML headspace sample was withdrawn from the vial and injected into the GC.

§ Surrogate concentration at 10 μ g/l,

Matrix spike concentration at 10 μ g/l.

- Indicates no peak found at assigned retention time for the compound.

< (Sign only with no numerical value) indicates small peak found at assigned compound retention time but was not integrated by instrument.

> Indicates actual concentration of compound may exceed reported value.

T Tentative identification of vinyl chloride, area of peak represents co-elution with methanol and unknown compound(s). Therefore, identification and/or concentration of the vinyl chloride compound is not definable.

ANALYSIS INFORMATION SHEET

Contract No.: N62467-93-D-0936

Job Name: MWR CLEANERS, Bldg. 193

Job #: 22567-145

Delivery order No.: 48

INSTRUMENT: HNU 311 Portable Gas Chromatograph

Analysis head Pressure: 8 PSI

Oven Temperature: 60 °C

INJ./DET. TEMP.: 100 °C

ANALYSIS TIME: 12 MIN.

COLUMN TYPE: HXT-502.2

SOURCE TYPE: 11.7 eV PID

*** SAMPLE ID.

710 E24-7'

COMPOUND NAME	PPM Mg/l	PPB µg/l	QC %R
Vinyl Chloride		T	
Trans. 1,2-DCE <small>(trans-1,2-Dichloroethylene)</small>		127	
Cis. 1,2-DCE <small>(Cis-1,2-Dichloroethylene)</small>	1.4	1,440	
Fluorobenzene surrogate §		deleted out	N/A
TCE <small>(Trichloroethylene)</small>	3.3	3,296	
PCE <small>(Tetrachloroethylene)</small>	47.3	47,273	

SAMPLE TEMP: 35 °C VOL. INJ: 10 µl
 SAMPLE MATRIX: SOIL WATER

GC SAMPLING METHOD: VOA HEAD SPACE

DILUTION FACTOR: 100 X

DATE SAMPLED: 6/24/96

DATE ANALYZED: 6/24/96

CAL. STD.: #14 6/25/96

NOTES:

* A 40 ml VOA vial containing 20 ml of sample, standard, or blank and a 20 ml headspace was heated to 35°C in a waterbath for 30 minutes. A 1 ml headspace sample was withdrawn from the vial and injected into the GC.

§ Surrogate concentration at 10 µg/l.

Matrix spike concentration at 10 µg/l.

- Indicates no peak found at assigned retention time for the compound.

< (Sign only with no numerical value) indicates small peak found at assigned compound retention time but was not integrated by instrument.

> Indicates actual concentration of compound may exceed reported value.

T Tentative identification of vinyl chloride, area of peak represents co-elution with methanol and unknown compound(s). Therefore, identification and/or concentration of the vinyl chloride compound is not definable.

ANALYZED BY: Jimmy D. Johnson

SAMPLE TEMP: 35 °C VOL. INJ. 1 µl
 SAMPLE MATRIX: SOIL WATER

GC SAMPLING METHOD: VOA HEAD SPACE *
 DILUTION FACTOR: 1X
 DATE SAMPLED: N/A
 DATE ANALYZED: 6/27/96
 CAL. STD.: #14 6/25/96

NOTES:
 * A 40 ml VOA vial containing 20 ml of sample, standard, or blank and a 20 ml headspace was heated to 35 °C in a waterbath for 30 minutes. A 1 ml headspace sample was withdrawn from the vial and injected into the GC.

§ Surrogate concentration at 10 µg/l,
 Matrix spike concentration at 10 µg/l.
 - Indicates no peak found at assigned retention time for the compound.
 < (Sign only with no numerical value) indicates small peak found at assigned compound retention time but was not integrated by instrument.
 > Indicates actual concentration of compound may exceed reported value.

T Tentative identification of vinyl chloride, area of peak represents co-elution with methanol and unknown compound(s). Therefore, identification and/or concentration of the vinyl chloride compound is not definable.

GC SAMPLING METHOD: VOA HEAD SPACE *

DILUTION FACTOR: 1X

DATE SAMPLED: 6/25/96

DATE ANALYZED: 6/25/96

CAL. STD.: # 22/6/25/96

NOTES:
 * A 40 ML VOA vial containing 20 ML of sample, standard, or blank and a 20 ML headspace was heated to 35°C in a waterbath for 30 minutes. A 1 ML headspace sample was withdrawn from the vial and injected into the GC.

§ Surrogate concentration at 10 µg/l,
 Matrix spike concentration at 10 µg/l.

- Dash for compound concentration indicates no peak found at assigned retention time.

< Less than sign only for compound concentration indicates small peak found at assigned retention time but not integrated.

> Greater than sign before a numerical value indicates actual concentration of compound may exceed reported value.

T Tentative identification of vinyl chloride, area of peak represents co-elution with methanol and unknown compound(s). Therefore, identification and/or concentration of the vinyl chloride compound is not definable.

CAL. STD.: # 6 6/26/96

NOTES:
 * A 40 ML VOA vial containing 20 ML of sample, standard, or blank and a 20 ML headspace was heated to 35°C in a waterbath for 30 minutes. A 1 ML headspace sample was withdrawn from the vial and injected into the GC.

§ Surrogate concentration at 10 µg/l,
 Matrix spike concentration at 10 µg/l.

- Indicates no peak found at assigned retention time for the compound.

< (Sign only with no numerical value) indicates small peak found at assigned compound retention time but was not integrated by instrument.

> Indicates actual concentration of compound may exceed reported value.

T Tentative identification of vinyl chloride, area of peak represents co-elution with methanol and unknown compound(s). Therefore, identification and/or concentration of the vinyl chloride compound is not definable.

Matrix spike concentration at 10 µg/l.

- Indicates no peak found at assigned retention time for the compound.

< (Sign only with no numerical value) indicates small peak found at assigned compound retention time but was not integrated by instrument.

> Indicates actual concentration of compound may exceed reported value.

T Tentative identification of vinyl chloride, area of peak represents co-elution with methanol and unknown compound(s). Therefore, identification and/or concentration of the vinyl chloride compound is not definable. JDB

 DATE SAMPLED: 6/26/96
 DATE ANALYZED: 6/26/96
 CAL. STD.: # C 6/26/96

NOTES:

* A 40 ML VOA vial containing 20 ML of sample, standard, or blank and a 20 ML headspace was heated to 35°C in a waterbath for 30 minutes. A 1 ML headspace sample was withdrawn from the vial and injected into the GC.

§ Surrogate concentration at 10 µg/l.

Matrix spike concentration at 10 µg/l.

- Indicates no peak found at assigned retention time for the compound.

< (Sign only with no numerical value) indicates small peak found at assigned compound retention time but was not integrated by instrument.

> Indicates actual concentration of compound may exceed reported value.

T Tentative identification of vinyl chloride, area of peak represents co-elution with methanol and unknown compound(s). Therefore, identification and/or concentration of the vinyl chloride compound is not definable.

SAMPLE TEMP: 35 °C VOL INJ: 1 µL
 SAMPLE MATRIX: SOIL WATER

GC SAMPLING METHOD: VOA HEAD SPACE
 DILUTION FACTOR: 1X
 DATE SAMPLED: N/A
 DATE ANALYZED: 6/27/96
 CAL. STD.: #5 6/27/96

NOTES:
 * A 40 ML VOA vial containing 20 ML of sample, standard, or blank and a 20 ML headspace was heated to 35°C in a waterbath for 30 minutes. A 1 ML headspace sample was withdrawn from the vial and injected into the GC.

§ Surrogate concentration at 10 µg/l,

Matrix spike concentration at 10 µg/l.

- Indicates no peak found at assigned retention time for the compound.

< (Sign only with no numerical value) indicates small peak found at assigned compound retention time but was not integrated by instrument.

> Indicates actual concentration of compound may exceed reported value.

T Tentative identification of vinyl chloride, area of peak represents co-elution with methanol and unknown compound(s). Therefore, identification and/or concentration of the vinyl chloride compound is not definable.

SAMPLE TEMP: 35 °C VOL. INJ: 1 µl
 SAMPLE MATRIX: SOIL WATER

GC SAMPLING METHOD: VOA HEAD SPACE

DILUTION FACTOR: 1 X

DATE SAMPLED: N/A

DATE ANALYZED: 6/27/86

CAL. STD.: # 5 6/27/86

NOTES:

* A 40 ML VOA vial containing 20 ML of sample, standard, or blank and a 20 ML headspace was heated to 35°C in a waterbath for 30 minutes. A 1 ML headspace sample was withdrawn from the vial and injected into the GC.

§ Surrogate concentration at 10 µg/l,

Matrix spike concentration at 10 µg/l.

- Indicates no peak found at assigned retention time for the compound.

< (Sign only with no numerical value) indicates small peak found at assigned compound retention time but was not integrated by instrument.

> Indicates actual concentration of compound may exceed reported value.

T Tentative identification of vinyl chloride, area of peak represents co-elution with methanol and unknown compound(s). Therefore, identification and/or concentration of the vinyl chloride compound is not definable.

CAL. STD.: # 5 6/28/96

NOTES:
 * A 40 ML VOA vial containing 20 ML of sample, standard, or blank and a 20 ML headspace was heated to 35°C in a waterbath for 30 minutes. A 1 ML headspace sample was withdrawn from the vial and injected into the GC.

§ Surrogate concentration at 10 µg/l, 20 7/29/96

Matrix spike concentration at 10 µg/l.

- Indicates no peak found at assigned retention time for the compound.

< (Sign only with no numerical value) indicates small peak found at assigned compound retention time but was not integrated by instrument.

> Indicates actual concentration of compound may exceed reported value.

T Tentative identification of vinyl chloride, area of peak represents co-elution with methanol and unknown compound(s). Therefore, identification and/or concentration of the vinyl chloride compound is not definable.

§ Surrogate concentration at 10 µg/l,

Matrix spike concentration at 10 µg/l.

- Indicates no peak found at assigned retention time for the compound.

< (Sign only with no numerical value) indicates small peak found at assigned compound retention time but was not integrated by instrument.

> Indicates actual concentration of compound may exceed reported value.

T Tentative identification of vinyl chloride, area of peak represents co-elution with methanol and unknown compound(s). Therefore, identification and/or concentration of the vinyl chloride compound is not definable.

CAL. STD.: #12 6/29/96

NOTES:

* A 40 ml VOA vial containing 20 ml of sample, standard, or blank and a 20 ml headspace was heated to 35°C in a waterbath for 30 minutes. A 1 ml headspace sample was withdrawn from the vial and injected into the GC.

§ Surrogate concentration at 10 µg/l,

Matrix spike concentration at 10 µg/l.

- Indicates no peak found at assigned retention time for the compound.

< (Sign only with no numerical value) indicates small peak found at assigned compound retention time but was not integrated by instrument.

> Indicates actual concentration of compound may exceed reported value.

T Tentative identification of vinyl chloride, area of peak represents co-elution with methanol and unknown compound(s). Therefore, identification and/or concentration of the vinyl chloride compound is not definable.

 CAL. STD.: # 12 6/29/96

NOTES:
 * A 40 ml VOA vial containing 20 ml of sample, standard, or blank and a 20 ml headspace was heated to 35°C in a waterbath for 30 minutes. A 1 ml headspace sample was withdrawn from the vial and injected into the GC.

§ Surrogate concentration at 10 µg/l, 7/27/96
 Matrix spike concentration at 10 µg/l.

- Indicates no peak found at assigned retention time for the compound.
 < (Sign only with no numerical value) indicates small peak found at assigned compound retention time but was not integrated by instrument.
 > Indicates actual concentration of compound may exceed reported value.

T Tentative identification of vinyl chloride, area of peak represents co-elution with methanol and unknown compound(s). Therefore, identification and/or concentration of the vinyl chloride compound is not definable.

TCE (Trichloroethylene)		10	
PCE (Tetrachloroethylene)		10	

SAMPLE TEMP: 35 °C VOL. INJ: 1 µL
 SAMPLE MATRIX: SOIL (WATER)

GC SAMPLING METHOD: VOA HEAD SPACE *
 DILUTION FACTOR: 1X
 DATE SAMPLED: N/A
 DATE ANALYZED: 6/30/96
 CAL. STD.: Cal #5

NOTES:
 * A 40 ml VOA vial containing 20 ml of sample, standard, or blank and a 20 ml headspace was heated to 35°C in a waterbath for 30 minutes. A 1 ml headspace sample was withdrawn from the vial and injected into the GC.

§ Surrogate concentration at 20 µg/l, 20 µg/l, 20 µg/l
 Matrix spike concentration at 10 µg/l.

- Dash for compound concentration indicates no peak found at assigned retention time.

< Less than sign only for compound concentration indicates small peak found at assigned retention time but not integrated.

> Greater than sign before a numerical value indicates actual concentration of compound may exceed reported value.

T Tentative identification of vinyl chloride, area of peak represents co-elution with methanol and unknown compound(s). Therefore, identification and/or concentration of the vinyl chloride compound is not definable.

DILUTION FACTOR: 1X

DATE SAMPLED: N/A

DATE ANALYZED: 6/30/96

CAL. STD.: #10 6/30/96

NOTES:
 * A 40 ml VOA vial containing 20 ml of sample, standard, or blank and a 20 ml headspace was heated to 35°C in a waterbath for 30 minutes. A 1 ml headspace sample was withdrawn from the vial and injected into the GC.

§ Surrogate concentration at 20 ug/l, 7/25/96
 Matrix spike concentration at 10 ug/l. dl

- Dash for compound concentration indicates no peak found at assigned retention time.
 < Less than sign only for compound concentration indicates small peak found at assigned retention time but not integrated.
 > Greater than sign before a numerical value indicates actual concentration of compound may exceed reported value.

T Tentative identification of vinyl chloride, area of peak represents co-elution with methanol and unknown compound(s). Therefore, identification and/or concentration of the vinyl chloride compound is not definable.
