RE: RCRA Facility Investigation/
Remedial Investigation Workplan for
Site 1 - Incinerator Landfill and
Site 41 - Former Incinerator;
MCRD Parris Island;
Beaufort County, S.C.

Dear Mr. Speranza:

Personnel with the S.C. Department of Natural Resources (SCDNR) have reviewed the above referenced document and offer the following comments.

The SCDNR concurs with all comments on the site-specific workplan made by NOAA's Coastal Resource Coordinator in his memorandum dated 12/17/97. The SCDNR also requests involvement in the selection of locations for the collection of background sediment samples, and may have additional comments regarding the number and location of samples following the January 21 site visit. In addition, the SCDNR has the following comments on the site-specific workplan:

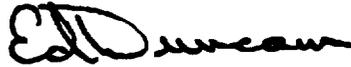

(page, paragraph, line)

- (1-1, 4, 2) Since the incinerator landfill projects into the marsh immediately adjacent to Class SA water (that portion of Archers Creek from Port Royal Sound to the Parris Island Bridge) which, by definition, is "suitable for primary and secondary contact recreation", it would seem appropriate to include "adult, adolescent, and child recreational users" among the list of potential receptors in the human health risk assessment.

- (2-1, 5, 5) Please clarify whether or not any fill material (clean or otherwise) was used to cover the landfill after disposal activities were discontinued in 1965. If fill material was used, any information on its composition, volume, depth, or areal coverage should be included.
- (5-1, 4, 1) The removal of groundwater that is "not potable" from an assessment of human health risk may be inappropriate, if it is demonstrated that there is a connection between any such groundwater and surface waters that are used for primary and secondary recreation.
- (5-2, after paragraph 2) Include "Adult, Adolescent and Child Recreational Users" as potential human receptors. Include ingestion of, and dermal contact with, sediment and surface water, and ingestion of finfish as pathways of concern in the human health risk assessment for this group.

We hope you find these comments helpful. If you have any questions, please contact Priscilla Wendt, the SCDNR project manager for this site, at 803-762-5068.

Sincerely,

Robert E. Duncan
Environmental Programs Director
