Subject: SWMU 45

Don & Gil,

I just got off the phone with Cliff Casey, Mark Sladic, and Keith Hein (Tetra-Tech) in a contractual discussion concerning SWMU 45. We are laying out the work planned for 2004 at this site and I kept noticing that while we were discussing the Feasibility Study the RI document did not have a green cover. That is Tetra Tech / Navy Code for complete!

I came back to my small federal government cubicle and searched my computer for data on this Site and the RI. It appears we are waiting on a thumbs up on our response to comments from SCDHEC. I know we have dropped the ball on this at times and there has been a lot of different folks moving through at SCDHEC. We have had Jerry Stamps, David Scaturo, Stacy French, Terry Hubbard, David Scaturo, Stacy French, and finally the best of the bunch.....Gill!

I believe we agreed at the last meeting that we did not want to stay in or go back to the RI phase. We all want to show movement forward and although we will be doing a lot of sampling and MIPS work it will be mostly pointed toward finding a remedy rather than looking at the nature of the contamination. SOOOOOO, could you move this to the top, or near the top of your list of things to do at MCRD, Parris Island? I would really like to clear up and settle the RI before moving to the FS.

Thanks and call if you have any questions,

Art
