Subject: Site 14 background info
Date: Friday, February 01, 2008 11:43:24 AM

Hi folks,

I was trying to id docs to start reviewing for background info on Site 14 Outfalls. I could not find anything for Site 14, other than what is in the SMP. Interestingly, it says funds are anticipated for an RI/FS, however, it does not reference any findings from a PA/SI. Maybe I missed something, or maybe it is lumped in with another group of Site PA/SI's. I have seen other references to an 1986 IAS, which is supposedly a PA equivalent. Would this have included all these "other" sites. Could someone please direct me to, and/or send me, the appropriate background document, whatever it is?

Also, I am awaiting the list of Sites with potential sediment impact to be grouped together with Site 14. I know we mentioned 21, 54, and Elliot's Beach.

But what else? 4? 5? 13c? 35 - for the creek area (or is that too much of a stretch to justify lumping) ? I have the CS/SI for these.

What about 50 - or is this one a range covered by a currently active range? What about the other MMRP sites? With this sediment OU or separate?

I guess we ruled out 53 as being big enough, and far enough away from the marsh, to be it's own OU.

I have no info on 39, 46, 47, 48, 49, or 52. Did I miss anything? I at least need a map of these.....

Mark/Charles/Heber, can you get me other background docs/info?

Thanks,
Lila
