Subject: Re: MCRD PI: SITE 45 RI RTC

In regards RTC for EPA comments:

For general comment #2 we will agree to disagree. In Region 4, we interpret the guidance to allow for a Screening Level ERA at all sites.

However, it is clear that the majority of the contamination at Site 45 is groundwater contamination. Due to the location of the site in the center of the commercial district of the depot it is unlikely to have significant impacts to ecological receptors.

★ General Comment #3. The response is not acceptable as written. The response must include language acknowledging the following: if the Navy pursues an MNA or partial MNA remedy at this site, these analyses will have to be done as part of the FS/PP/ROD or possibly in a Treatability Study.

Specific Comment #4 - Same as General Comment #2.

★ Specific Comment #6 - The response is too limited. The comment still needs to be addressed. The volume of water that was removed should be calculated (even if an estimate is the best that can be done). The maintenance problems need to be identified and described. This information will feed directly into the FS/PP/ROD to help in choosing a viable final remedy.

Specific Comment #25 - The response needs to be inserted into the text.

Specific Comment #27 - Same as General Comment #2.

Specific Comment #37 - Same as General Comment #3.

The remainder of the responses are acceptable to EPA.
