Subject: FS OU4 PNS

Matt -

Thank you for the opportunity to review the Draft FS for OU4 PNS. We have conducted a summary review of the issues presented in the document and we are in agreement with the recommendations provided by NOAA. NOAA has outlined the areas/locations of highest concern, their contaminants of concern and remedial actions that will best address those issues. We are interested to see some of the long-standing PAH and metals issues resolved via remedial action and look forward to decisions on the remaining areas involved in the ILTM program.

Please let us know when there are further discussions or meetings related to remedial actions at OU4 sites.

Best regards,

Ken Munney
