Subject: Site 10 IRACR
Attachments: Final_ABL_Site10_IRACR.pdf

Hi all,

Now that the Five Year Review is almost complete, I wanted to put in a plug for finishing the Site 10 IRACR by the end of this year. I have attached the latest version of the document that I have, which EPA reviewed and commented on at least once already. I thought there was some more recent email traffic about signing this after discussing it in terms of CERCLIS targets, but I can't find it.

I consider this document very close to done, a significant effort would not be required to complete it. Since some time has passed, section 4 needs to be updated to reflect that the pipe maintenance activities have already occurred. We should also note that efforts to address capture issues in the bedrock aquifer are ongoing. Also, Section 3.4 should reflect that the LUC RD was finalized this year.

Thanks,

Sarah Kloss
