NAS Jacksonville Town Meeting, taken on
Tuesday, August 8, 1996, commencing from 7 p.m. to
7:40 p.m., at the Orange Park Holiday Inn Hotel,
Orange Park, Florida, before Marlene M. Thompson,
Registered Professional Reporter, Notary Public in
and for the State of Florida at Large.

SPEAKERS:

WILLIAM DOUGHERTY, Installation Restoration
Public Affairs Officer.

CAPTAIN ROBERT D. WHITMIRE, Commanding Officer,
NAS Jacksonville.

DIANE LANCASTER, Installation Restoration
Program Manager.

- - -

NAS-17

P R O C E E D I N G S

August 8, 1996

7 p.m.

- - -

MR. DOUGHERTY: Good evening. My name is Bill Dougherty. I'm the Installation Restoration Public Affairs Officer. That's a big mouthful, but what I do is I am involved in community relations and helping out with areas such as public meetings and making sure we do what we can to help you, the public, understand and get the information about our cleanup activities at Naval Air Station Jacksonville.

I want to welcome you all to our public meeting tonight. Our meeting is on the record. We will have a transcript of everything discussed this evening, and that transcript will be available at our Information Repository, which is at the Webb Wesconnett Branch Library of the Jacksonville Public Library on 103rd Street. Look for that in approximately four weeks.

We have some handouts for you tonight. The first is our agenda and you should have that on your chair, and it tells you what we're going to be talking about tonight. And then on the back

1 of that is a map. That map will show you the
2 location. The shaded area down on the bottom
3 here is OU1, okay, and you will see the markings
4 of all the other sites on the installation.

5 Another handout that you have is an acronym
6 sheet. Now, we'll try not to use too many
7 acronyms tonight, but in the environmental
8 business that's something that we have to deal
9 with on a regular basis, and so that's why we
10 have this acronym sheet for you to refer to to
11 help you understand the technical terms that
12 we're using.

13 On the back is a little place for you to
14 take notes. That's what I'd like to recommend
15 you do. Go ahead and jot down notes for
16 yourself as we go through the evening so that
17 you'll have those notes available to you when we
18 reach the comment period.

19 Our fact sheet gives you a breakdown of
20 what the proposed plan is about. The
21 alternatives that we looked at, the preferred
22 alternative, it has a lot of good information in
23 there regarding the cleanup of OU1. I recommend
24 you all pick one up so you can take that with
25 you, okay, and to refer to at your leisure.

1 We also have comment forms tonight.
2 Because this is a public meeting, we are in a
3 public comment period. This is your opportunity
4 as a community to go ahead and comment on the
5 proposed plan and on the cleanup alternative
6 that we have chosen. It's a very simple form.
7 You can go ahead and just put in your comments
8 in there. On the back, all you have to do is
9 fold it and put a stamp on it, if you want to
10 mail it, or you can drop it off to us tonight,
11 if you want to fill it out and leave it with us
12 tonight. Any way you'd like to do that, we're
13 more than happy to receive your comments.

14 Our presentation tonight is going to be
15 about 20 to 25 minutes, and then we're going to
16 go into the public comment period. Just a few
17 notes before we get started. Like I said,
18 please go ahead and take those notes while we're
19 going through the presentation. We would like
20 you to hold your comments until the comment
21 period. Once we get done with the presentation
22 then we'll open everything up.

23 And during that comment period, if I could
24 ask you to please raise your hand, we'll call on
25 you, we will go around the room, and I ask that

1 if you have a comment, you make one comment, one
2 follow-up comment, and then if there are no
3 other folks after that, we'll come back to you
4 and make sure we get around the room. We should
5 have plenty of time since our comment period is
6 going to be almost 90 minutes long. We can get
7 back to you and let you have additional comments
8 if you need to.

9 Our meeting will run from now until 9 p.m.,
10 and as I said, you can submit those written
11 comments, and we will take those written
12 comments until 3 p.m. on Saturday, September the
13 7th, which is the end of the public comment
14 period.

15 Okay. Are we all in agreement with
16 tonight's guidelines for our meeting?
17 All right. Thank you very much.

18 At this time I would like to introduce
19 Captain Robert D. Whitmire. He is our
20 commanding officer. He is a graduate of the
21 Naval Academy and is very familiar with the
22 Jacksonville area. As a naval aviator, he has
23 flown with three Jacksonville squadrons and
24 returned to the First Coast to assume his
25 current position. Captain Whitmire.

1 CAPT. WHITMIRE: Thanks, Bill, and good
2 evening to everybody. I'm Captain Bob
3 Whitmire. I am the Commanding Officer at Naval
4 Air Station Jacksonville, and I'd like to add my
5 welcome to this public meeting this evening. I
6 want to tell you that we're excited about the
7 progress we've made so far in cleaning up and
8 making plans to clean up Operable Unit One,
9 which is commonly referred to as OUI at the
10 Naval Air Station.

11 There are some posters out on the back that
12 are available that you should look at before you
13 leave this evening that show the restoration
14 process and the steps that we have taken to get
15 where we are today.

16 Before I go any further, I would like to
17 recognize a few people who have been key so far
18 to the steps we have taken, and they'll provide
19 points of contact for you if you have any
20 questions about the cleanup activity we have at
21 NAS Jacksonville.

22 I am going to ask you to stand when I call
23 you so everybody can recognize who you are.

24 First, Diane Lancaster. Diane is the
25 Installation Restoration Manager at NAS

1 Jacksonville, and she is also the co-chair for
2 our Restoration Advisory Board, which, as many
3 of you know, is the board that meets monthly to
4 go over these issues.

5 Margo Latham. Thanks, Margo. Margo is the
6 community co-chair. She is the other side
7 representing the community. And while I've got
8 Margo here, I'd like to ask, without
9 embarrassing anybody, the members in the room
10 that are members of the RAB, the Restoration
11 Advisory Board, if you'd stand just so people
12 can see who you are in case they have any
13 questions. Curtis, you can stand.

14 Those are some of the members of the
15 Restoration Advisory Board that meet monthly and
16 I attend those meetings as well, and they are
17 very familiar with the program we have going
18 tonight. And if you have any questions about
19 the Restoration Advisory Board, I would like you
20 to direct them to Margo Latham, and she can
21 assist you in answering questions and maybe even
22 solicit your participation in the Restoration
23 Advisory Board after tonight's meeting.

24 Next, Dana Gaskins. Dana is from Southern
25 Division, Naval Engineering Facilities Command

1 up in Charleston. He is a representative down
2 here, and he is a focal point for anything that
3 has anything to do with contracts or money. An
4 important guy to have with us.

5 Jorge Caspary. He didn't make it tonight?
6 Okay. Jorge is from the Florida Department of
7 Environmental Protection over in Tallahassee,
8 and he has been working closely with the RAB.

9 Martha Berry? Martha is from the United
10 States Environmental Protection Agency, Region
11 IV, up in Atlanta, Georgia. Thanks for being
12 here, Martha.

13 And then Bill Dougherty you have already
14 met. Bill is important because he is our public
15 affairs officer and deals with all the community
16 relations, and he is the guy that can put you in
17 contact with whoever you need to know. So if
18 you have a question that you're not sure where
19 it goes, speak to Bill, he can find out how to
20 do it. And he is right there in our public
21 affairs office.

22 Okay. Now that the amenities are complete,
23 I'd like to go ahead and proceed and get on with
24 the reason we're here tonight and that's the
25 topic of Operable Unit One, which we'll refer to

1 as OU1.

2 These people that I just introduced, along
3 with two companies, ABB Environmental Services
4 and Bechtel Environmental, make up the
5 partnership that's been formed that's going to
6 produce this plan that we're going to use to
7 clean up the site, and from my vantage point
8 they have done a great job, put in a lot of
9 effort and everything and it's really a
10 tremendous effort they have put forth, so my
11 hat's off to those folks.

12 This has been a rewarding experience for me
13 because after this process is completed, I'll
14 get to sign what they call a Record of Decision,
15 first one for NAS Jacksonville, and that's going
16 to take us from the period where we've been
17 studying it and analyzing it and arguing about
18 which is the best way to go, and we'll actually
19 put a design into effect and come up with a plan
20 of action. We'll actually start doing some
21 cleanup and any actual work that needs to be
22 done on the site at OU1. So this is a really
23 important thing to get this Record of Decision
24 signed.

25 And I want to tell you that I live right on

1 the base with my wife and children, and I'm
2 going to be here for a couple more years. I am
3 one year into a three-year tour, and I have a
4 personal interest in making sure that this is
5 done properly. I follow it very closely, which
6 is why I go to a lot of these meetings and why
7 I'm out here tonight. I think this is a really
8 important step forward. I think it's going to
9 be a great success story for the Navy to do this
10 properly.

11 You, the community, plays an important role
12 throughout this process and you're represented
13 by the Restoration Advisory Board members. They
14 are the ones that represent you. I'd encourage
15 you, if you have an interest in this, to come
16 participate. Not only do you get to get
17 involved in the decisions, but you really learn
18 a lot about things that most of us don't get
19 exposed to. So there is some good things to
20 learn. These people play an important role, and
21 I want to encourage you to ask them questions,
22 if you have anything, up through the end of this
23 comment period which ends on September 7th at 3
24 p.m., which is a Saturday, and Bill has already
25 addressed that.

1 Tonight the whole purpose of this meeting
2 is to give you a presentation to describe where
3 we are, but the real purpose is to solicit your
4 input and to get your comments. We really are
5 very open and receptive to anything you have to
6 say because we want to make sure that this is a
7 team effort and do this thing properly. The
8 meeting is for you. Your opinion counts.

9 And the other thing that I have a personal
10 concern with is that we're going to spend a lot
11 of money to do this and it's a lot of tax
12 dollars. Just like you, even though I'm in
13 uniform, I am a taxpayer. I pay a lot of taxes
14 and I don't like to see taxes wasted any more
15 than you do. And I spend all my days -- there
16 are 20,000 people at that base, and I spend all
17 day long trying to find ways to do things more
18 efficiently to save money, because I don't like
19 paying taxes any more than you do. And here is
20 another opportunity to do things smart and get
21 the most bang for the buck. I think that's
22 important to keep in mind because we want
23 everybody to benefit from this.

24 Please feel free to ask questions at the
25 end of the presentation. We have a lot of

1 technical experts here that can answer your
2 questions. If they're not clear, keep asking.
3 We'll get you an answer and put it into terms
4 that you can understand. And I'm one of those
5 people that has to ask a question a lot of times
6 because some of this stuff is a little more
7 technical than I'm used to dealing with. I'm a
8 pilot. I'm used to pulling back and the ground
9 gets smaller, pushing forward and the ground
10 gets bigger. I got that down, but some of this
11 stuff gets pretty technical when you start
12 talking parts per million and parts per billion,
13 so don't be embarrassed if you have questions
14 because I guarantee they've all been asked
15 before and you need to understand it.

16 So I'm really glad you joined us tonight.
17 I really want to thank you personally for being
18 here. At this time I am going to sit down.
19 That's the best part of my speech. And I'm
20 going to turn it over to Diane, and Diane
21 Lancaster will proceed with the meat of the
22 presentation.

23 MS. LANCASTER: Thank you, Captain. Good
24 evening, and thank you for being here. As
25 Captain Whitmire, Bill Dougherty already said,

1 the purpose of this evening's meeting is to
2 allow you an opportunity to comment on the
3 proposed alternative to Operable Unit One or
4 commonly known as the Child Street Landfill.

5 The key points that I am going to present
6 tonight are four. The Installation Restoration
7 program, a brief history of OU1, the preferred
8 alternative, and the benefits of the preferred
9 alternative we selected.

10 The Installation Restoration program
11 follows the Comprehensive Environmental Response
12 Compensation and Liability Act, otherwise known
13 as CERCLA or Superfund. The team works together
14 under the Federal Facilities Agreement, and this
15 team is composed of the United States
16 Environmental Protection Agency, or EPA, Florida
17 Department of Environmental Protection, FDEP,
18 and the Navy.

19 The overview of the program is, a
20 preliminary assessment is conducted doing a
21 records review and interviews to determine any
22 sites that may have had anything disposed on
23 them. A site inspection is conducted to
24 determine whether further investigation is
25 needed. Remedial investigation is collecting

1 samples and determining what, where and how much
2 contamination is present at the site. And then
3 a risk assessment is conducted to define the
4 risk to humans and animals in the environment.

5 A feasibility study evaluates methods for
6 cleaning up the site, and a proposed plan
7 describes alternatives considered and outlines
8 the preferred alternative.

9 A public comment period, which is where we
10 currently are, allows you, the public, to review
11 and provide comments about the results of
12 studies, and a Record of Decision documents the
13 selected cleanup method to be implemented, while
14 the remedial design and remedial action design
15 and build the selected cleanup alternative.

16 The history of Operable Unit One. It's
17 composed of two potential sources of
18 contamination or PSCs. PSC 26 is the Old Main
19 Registered Landfill or disposal area. It's
20 about 40 acres, and it was used for the disposal
21 of discarded vehicles, household and sanitary
22 wastes. Liquid industrial wastes were disposed
23 in the pits that are outlined on the overhead.
24 Demolition and construction debris and low level
25 radioactive waste such as radium 226 and 228

1 were also disposed in this landfill. It was
2 closed in 1978 when light nonaqueous-phase
3 liquid, or LNAPL, was discovered floating in the
4 water. LNAPL is a mixture of oils that
5 basically float on water, and that's a common
6 acronym that we use frequently in this program.

7 PSC 27 is the former transformer storage
8 area. It's less than one acre, and due to
9 vandalism in 1978, transformer oil containing
10 polychlorinated biphenyls or PCBs were spilled
11 in this area. The transformers in the
12 contaminated soil were excavated or dug up and
13 disposed off site, and we're still continuing to
14 make sure that that poses no problems.

15 In the past, in 1983, we did an initial
16 removal action, and this was due to the LNAPL
17 that we found floating on the water. We dug
18 underground trenches to allow the LNAPL and
19 water to collect in a series of ditches. And
20 the skimmer system collected the LNAPL from the
21 surface of the water. The water did not meet
22 the USEPA's discharge standards, however, so
23 earthen dams were constructed to block the
24 water, and the system was shut down.

25 Then again in 1994, we did an interim

1 remedial action and we had a public meeting for
2 that also. We conducted a focused remedial
3 investigation and feasibility study where we
4 found PCB contaminated oil was floating on the
5 watertable. Trenches were then constructed to
6 collect the water and LNAPL and pumps were
7 installed which continue to collect the LNAPL
8 from the surface of the groundwater.

9 The LNAPL, or the oil, is stored on site
10 prior to disposal off site and we keep track of
11 that. The system may be upgraded if the current
12 system no longer effectively removes the LNAPL
13 from the surface of the groundwater.

14 Low level radiation was also disposed on
15 the landfill where it had been removed from
16 PSC 13 at NADEP, and on your map on the opposite
17 side of your agenda you can find PSC 13 toward
18 the water around NADEP. This was a disposal
19 site where the radium paint that had been used
20 to paint dials in World War II had been disposed
21 in a pit. We dug that up and consolidated that
22 on OU1.

23 Also on PSC 18 around Mulberry Cove we had
24 some sandblasting material that we collected.
25 That had naturally occurring radioactive

1 material that is often found in granite and
2 sand, and we dug that up and also put that on
3 the landfill.

4 In addition, when we were constructing the
5 LNAPL recovery system north of Child Street, we
6 encountered some radioactive paint that had been
7 disposed there, and we collected that and
8 disposed it on the landfill.

9 Various studies that were conducted as a
10 part of our investigation include a geophysical
11 survey to determine where all the landfill
12 debris was buried, a radiological survey to
13 determine where the low level radioactive
14 material is, and monitoring wells were installed
15 to determine the type and extent of any
16 contamination on the watertable. Chemical
17 testing of soil, watertable, surface water in
18 ditches and streams, and sediment from muds were
19 also conducted.

20 As a result, after studying the landfill we
21 found pesticides, PCBs, solvents and heavy
22 metals in the soil, groundwater and sediment.

23 Next we determined the risk to people in
24 the environment. And after this determination
25 we developed five alternatives to address the

1 contamination. After thorough discussions with
2 EPA, DEP and the Restoration Advisory Board, we
3 chose alternative three. And you can see there
4 the various alternatives, the different costs,
5 and the different time frames. They're also on
6 the boards outside the room for further study.

7 The presumptive remedy used for landfills
8 is what we decided to go with. A presumptive
9 remedy is an EPA-identified cleanup method as a
10 preferred method for landfills: Cover the
11 landfill, and then clean up the groundwater
12 because it does not make sense to dig up a
13 landfill and go put it in another landfill.

14 So all of our alternatives include a cap
15 and cover. This cap is a 30 mil, basically a
16 plastic liner, which will cover the low level
17 radioactive material, and I have samples of what
18 a 30 mil liner is like, a couple of different
19 types of textures that could be used in the
20 design.

21 On top of that liner and over the rest of
22 the landfill will be 18 inches of soil which
23 will be graded, and on top of that an additional
24 six inches of soil to allow the growth of small
25 plants and grass and to reduce the erosion.

1 The components of alternative three are to
2 collect the soil outside the landfill and the
3 sediments and muds in the streams that will be
4 dug up and placed on the landfill prior to
5 covering it. A cap and cover system will be
6 installed, and the contamination in the
7 groundwater will be allowed to break down
8 naturally, which is already occurring. It will
9 be assisted by natural flushing with rain, and
10 the water will be monitored to check the
11 process. If the process is not working right,
12 carbon and nutrients will be added to help the
13 bacteria break down the contaminants. We also
14 have a contingency plan to collect water in the
15 stream if contaminant levels begin to reach
16 preset levels.

17 Alternative three effectively reduces the
18 risk. The estimated time is 30 years. The
19 estimated cost is \$4.2 million. And if we have
20 to incorporate some contingencies, the cost will
21 increase to \$7.3 million.

22 On the slide, you will be able to tell --
23 to the side of the landfill -- I'll do this,
24 I'll point it out. These are areas here that
25 will be excavated from outside the landfill.

1 They include the area that is in the LNAPL
2 removal area and outside base housing and in the
3 weapons area. Also, the sediments in the stream
4 that goes here, down there and up in the ditch
5 by the LNAPL area are the sediments that are
6 going to be dug up. The groundwater is under
7 here, and that's the groundwater that we will be
8 monitoring.

9 The benefit of alternative three is that
10 it's the best balance among the three components
11 of risk reduction, cleanup time, and cost. It
12 allows five years of monitoring prior to adding
13 the nutrients so we can do evaluation of the
14 natural remediation, and it is preferred by the
15 Navy, EPA, FDEP and the Restoration Advisory
16 Board.

17 In summary, I discussed the IR process
18 where we're at; the public comment period; a
19 site history; where the soil, sediment and
20 groundwater contamination is; the preferred
21 alternative, alternative three, which is to dig
22 up the soil and sediment outside the landfill;
23 cap and cover the landfill; and monitor the
24 groundwater; and their benefits, which is the
25 best balance of our constraints, and it's

1 preferred by all parties: Navy, FDEP, EPA and
2 the RAB.

3 Our public comment period, as was
4 expressed, is until September 7, 1996, and
5 comments from tonight will be recorded and
6 responses will be documented in the Record of
7 Decision. The preparation of the Record of
8 Decision may be delayed due to concerns by the
9 state of Florida for future land use. When
10 resolved, the Record of Decision or ROD will be
11 signed by Captain Whitmire with written
12 concurrence by EPA and FDEP.

13 At this point this concludes my
14 presentation, and I'd like to turn the podium
15 over to Bill Dougherty.

16 MR. DOUGHERTY: Okay. That is the 20 to 25
17 minutes of the presentation that we were telling
18 you about. Now we are at the comment period.
19 This is the opportunity for you, the public, to
20 make your comments.

21 Now, the way we discussed it earlier, there
22 are several ways you can make your comments. If
23 anyone would like to make a comment, please
24 raise your hand, we will address you, and you
25 can step up to the microphone and make your

1 comment. It will be included in the public
2 record. If you would prefer to make written
3 comments, we have written comment forms
4 available.

5 Are there any comments that want to be made
6 at this time?

7 AUDIENCE MEMBER: (Raises hand.)

8 MR. DOUGHERTY: Yes, sir, if you could
9 identify yourself for the public record, sir.

10 AUDIENCE MEMBER: I am [name], interested
11 citizen.

12 MR. DOUGHERTY: Yes, sir.

13 AUDIENCE MEMBER: Am I limited to one
14 question, a follow-up as --

15 MR. DOUGHERTY: One follow-up, please, sir.

16 AUDIENCE MEMBER: The PCBs from the
17 transformer -- I understand you dug up the
18 transformers, but there was leakage on the PCBs
19 and is it still there?

20 MR. DOUGHERTY: Diane?

21 MS. LANCASTER: From the transformer area,
22 that soil was dug up and removed, but throughout
23 the whole landfill we found evidence of PCBs
24 being dumped, so there are PCBs still in the
25 groundwater.

1 AUDIENCE MEMBER: The question in regard to
2 the environmental people agreeing, they agreed
3 to the alternative that you have laid out. Did
4 they qualify their agreement?

5 MS. LANCASTER: As far as?

6 AUDIENCE MEMBER: As this being a
7 satisfactory process --

8 MS. LANCASTER: Yes.

9 AUDIENCE MEMBER: -- or does it have to be
10 tested over a number of years?

11 MS. LANCASTER: This process, the
12 alternative -- or the way the cleanup will
13 happen under CERCLA is that it is monitored
14 every five years for up to 30 years or longer.

15 AUDIENCE MEMBER: But the environmental
16 people have accepted this process as being
17 acceptable as opposed to digging it up and
18 hauling it somewhere else?

19 MS. LANCASTER: Yes, sir. Actually, that's
20 preferred by the EPA.

21 And, Martha, would you like to address
22 that?

23 MS. BERRY: EPA has a policy in CERCLA
24 cleanups as far as landfills that it's preferred
25 to leave it in place because it is not thought

1 to be environmentally sensible, if you will, not
2 to mention cost effective. To essentially move
3 landfills from one landfill, you'd essentially
4 be moving it to another landfill.

5 So instead, the preferred approach to a
6 landfill, which tends to be huge and would be
7 extremely costly to dig up with somewhat minimal
8 or very minimal improvement to the environment
9 is to control exposure by capping and other land
10 use restrictions to control any migration. If
11 there is migration, through the groundwater, as
12 is the case here, or if there was, it's not the
13 case here, but in other landfills there might be
14 air pathways that need to be addressed and that
15 type of thing.

16 So that's EPA's preferred method of
17 addressing landfill issues under Superfund.

18 AUDIENCE MEMBER: I understand the
19 economics, but do you agree or do you accept the
20 fact that there has been no seepage that was
21 dumped into the aquifer to the point that the
22 groundwater is damaged, wells are damaged at
23 all?

24 MS. BERRY: There is groundwater
25 contamination and part of our remedy, the

1 preferred remedy, and that's certainly not the
2 selected remedy until after the public comment
3 period, but it does address the groundwater
4 initially through natural attenuation, but if
5 that does not work over time -- and that will be
6 monitored over the first five years. If that
7 does not appear to be proceeding quickly enough,
8 then nutrients will be added to the groundwater
9 to accelerate the bioremediation.

10 So the intent is at the end of the 30-year
11 period that the groundwater will meet all EPA
12 and FDEP groundwater standards.

13 AUDIENCE MEMBER: If we don't have salt
14 water intrusion by that time? Okay. Thank you.

15 MS. BERRY: Thank you.

16 MR. DOUGHERTY: Just as an elaboration, so
17 you understand, regarding the bioremediation
18 that Diane talked about, that bacteria that
19 breaks down -- the bacteria breaks down
20 contaminants, correct?

21 MS. BERRY: (Nods head.)

22 AUDIENCE MEMBER: Does it work on PCBs?

23 MS. LANCASTER: Yes, it does. In addition,
24 I heard a concern that you may be concerned that
25 some drinking wells may be affected. There are

1 no drinking wells in this area.

2 MR. DOUGHERTY: Okay. Are there any other
3 comments that anyone would like to make?

4 THE AUDIENCE: (No response.)

5 MR. DOUGHERTY: Okay. Since we have no
6 other comments, sir, if you had any additional
7 comments you would like to make, you can feel
8 free to make them at this time. We want to make
9 sure that your concerns are addressed.

10 AUDIENCE MEMBER: This type of oversight
11 and corrective action has been going on for
12 quite some time or has been attempted for quite
13 some time. How long has the Navy, NAS Jax, been
14 looking after this as far as digging up the
15 transformers, removing those? How long has that
16 been going -- how long have they been after the
17 environmental control aspects of this as opposed
18 to reaching this point of decision?

19 MS. LANCASTER: In '78 is when the
20 vandalism was discovered, and that's when the
21 transformers in the soil were excavated and dug
22 up.

23 AUDIENCE MEMBER: Otherwise it was just
24 dumped, being added to it?

25 MS. LANCASTER: Yes, sir. It was closed in

1 '78.

2 AUDIENCE MEMBER: Where has the material
3 been going since that time?

4 MS. LANCASTER: We have a contract with the
5 city landfill and all of our contractors dispose
6 our trash via the city landfill, which is out at
7 Trail Ridge.

8 AUDIENCE MEMBER: Yes. It's going there
9 now --

10 MS. LANCASTER: Yes.

11 AUDIENCE MEMBER: -- without regard to what
12 it is?

13 MS. LANCASTER: No, sir. We are very, very
14 careful. We do not send any hazardous waste, we
15 have a very strict hazardous waste program on
16 board.

17 AUDIENCE MEMBER: And that is hauled
18 where?

19 MS. LANCASTER: That hazardous waste is
20 collected and inspected pretty regularly, by the
21 way, by the state and EPA. And it is
22 collected. We have a permanent storage area,
23 and from there is disposed through the Defense
24 Logistics Agency through their contractors.
25 They inspect their contractors to make sure that

1 it is going to appropriate places.

2 AUDIENCE MEMBER: That does not include the
3 runoff from the Tarmac for aircraft where they
4 scrub down aircraft and it drains into the
5 river?

6 MS. LANCASTER: The actual washing of the
7 aircraft and the outside of the aircraft is done
8 on the aircraft wash rack. We have identified
9 another waste stream and that is currently being
10 collected.

11 AUDIENCE MEMBER: Okay.

12 MR. DOUGHERTY: Okay. We appreciate the
13 interest and we would like to invite you to our
14 Restoration Advisory Board meetings. We have it
15 at the Timucuan Elementary School. It's on
16 110th Street. It meets the third Tuesday from 7
17 p.m. to 9 p.m. We'd love to have you out there,
18 because we discuss these issues all the time,
19 address your concerns, and you can see all the
20 types of activities that we're involved in.
21 There's a lot more activity. It's not just
22 OUI. There is lots of different areas that
23 we're working on around the base, and you can
24 keep up to date every month on exactly what
25 we're doing. And we'd like to have you there

1 any time you'd like to come.

2 Are there any other comments?

3 THE AUDIENCE: (No response.)

4 MR. DOUGHERTY: Okay. If there are no
5 further oral comments, if anyone wants to make
6 written comments, the forms are available.

7 Other than that, that concludes our meeting.

8 Oh, yes. Please have some cookies and
9 coffee and I guess that's iced tea back there.
10 We encourage you to have some snacks and drinks
11 on your way out. Thank you all for coming. We
12 will be here, if anyone has anything, any other
13 questions while you're snacking, we will be here
14 to answer your questions.

15 (The proceedings were concluded at 7:35
16 p.m.)
