Contract Task Order No. 0007

Subject: Information Relating to Petroleum Site Near Solid Waste Management Unit 7

Dear Mr. Glover:

At the request of Mr. Dudley Patrick, Naval Facilities Engineering Command, Southern Division, Brown & Root Environmental is pleased to deliver the enclosed information pertaining to the petroleum site near solid waste management unit (SWMU) 7. The package consists of hard-copy information taken from the draft Resource Conservation and Recovery Act (RCRA) Facility Investigation (RFI) report for Eight Sites at NAS Key West and a database file (in DBase IV format) of the analytical results obtained from the petroleum site. The results from this petroleum site indicate that it is not a part of the contamination that was detected and remediated at SWMU 7. Results from the petroleum site also indicate the presence of BTEX compounds that are consistent with fuel contamination in the soil. The conclusions and recommendations in the RFI report call for additional investigation at this petroleum site due to the presence of these contaminants in soil at an endangered species habitat. The report also recommends that additional investigation be performed under the NAS Key West Underground Storage Tank program because of the possible fuel contamination.

Please call me at (803) 649-7963, x. 345 if you have any questions regarding the enclosed information.

Sincerely,

C. M. Bryan  
Task Order Manager
