EXECUTIVE SUMMARY

This report summarizes additional groundwater sampling activities conducted at Site 38 (Operable Unit 11) at the Naval Air Station Pensacola. Groundwater samples were collected from December 7-13, 2000, using low-flow techniques to obtain samples exhibiting low turbidity. The samples were submitted for selected volatile organic compound (VOC), semi-volatile organic compound (SVOC) and metal analysis as outlined in the Site 38 Re-Sampling Memorandum. Selected wells were also sampled for monitored natural attenuation (MNA) parameters. This report presents the results of the sampling and evaluates the applicability of MNA at the site.
