

## CONCURRENCE FOR NO FURTHER ACTION

### SWMU 74 – Unlined Overland Drainage Ditches

#### Naval District Washington - Indian Head, Indian Head, MD

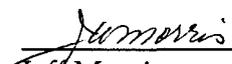

In January 2002, the Navy in partnership with the United States Environmental Protection Agency (USEPA) Region III and Maryland Department of the Environment (MDE) conducted a Desk-top Audit at the Naval District Washington – Indian Head (formerly Naval Surface Warfare Center, Indian Head Division) in Indian Head, Maryland. This unit was included in the Desk-top Audit Decision Document, which was signed by all Remedial Project Managers on April 23, 2002.

The decision reached during the desk-top audit was this SWMU would remain an Area of Concern (AOC) and additional work would be needed to identify and verify ditches with potential contamination. It was expected that limited sampling would be conducted in any identified ditches and an approach to address these types of ditches would be developed.

At the October 2, 2003 Indian Head Installation Restoration Team (IHIRT) meeting, the team agreed to administratively close out SWMU 74, as it represented individual drainage ditches too numerous to address. Drainage ditches considered problematic have been addressed during investigations of them specifically or along with adjacent sites. Any ditches found to be a potential concern during future site investigations will be addressed by those investigations.

It is the consensus of the Project Managers, defined as the Department of the Navy (DoN), the USEPA Region III, MDE, and members of the Indian Head Tier I Partnership, that SWMU 74 requires no further action under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), as amended.
