Subject: Draft Closeout Report - Sites 17 & 42 - NAVFACWASH Comments

I have reviewed the subject document and find it to be generally excellent. I have just the following minor comments:

Section 1.4.2 Navy Points of Contact

Page 1-5 - Shawn Jorgensen's code should be "HN2WSJ".

Section 2.1 Mobilization and Site Preparation

Page 2-1 - In the first paragraph, "Explosive Area" should be "Restricted Area".

Section 2.3 Erosion and Sediment Control Installation

Page 2-2 - In the third paragraph, the period after September should be a comma.

Section 4.1 Schedule

Page 4-2 - Under Temporary Shutdown, "rendered" should probably be replaced with "certified".

Section 5.2 - Site Access

Page 5-2 - This section states that "all workers, subcontractors, and visitors" attended a mandatory site-specific orientation and signed the SSHSP before entering the site. Just who "visitors" represents is not mentioned, but should be clarified since this visitor never did these things.
